This is a real long shot, but Playthings of the Past has an
extensive listing of used transformers for sale. Each has
specs, size, etc. Maybe you could get lucky browsing that
list if you can't locate an old catalog???

2646. National NC-200 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-05 00:00:00 UTC
From: Larry & Becky <redeemed@cox-internet.com>
Message-ID: <39DC9346.330A000B@cox-internet.com>
Source record: 60615

Hi guys,
I recently acquired an NC-200 and it's matching speaker
from an estate and have no idea as to it's condition.
I have not turned it on or even plugged it in. I have
removed the cabinet and repainted it and it looks nice.

I was reading the manual and saw something about a dummy
plug. I did not get this with the radio and was wondering
if I needed it to operate the radio.

Also, do all those capacitors under the chassis need to
be replaced?

Any other information about this radio would be greatly
appreciated. This looks like a keeper and I am looking
forward to firing it up.

Regards,
Larry

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Jim,

I have been using a Cushcraft R7 vertical antenna for almost 10 years. It does use counterpoise radials (a group of 7 stainless steel wires sticking out from the base). No, it doesn't work as well as a beam, but I have worked DXCC with it and for the price, it is a super performer. I swear by it more than at it! The R7 isn't made any more, but has been replaced by the R8 which does 6-40 meters.

AES sells the R8 for $400.00. More information about this antenna can be found at http://www.cushcraft.com/amateur/r8.htm

I have not tried or even seen reviews on the 2 specific antennas that
you mention. But I know just enough about antenna theory to be
dangerous so I am going to throw out a few thoughts for your
consideration.

1. Get an ARRL antenna handbook and read the sections of it that are
pertinent to the type of operation you do. This one simple action
will
go a long way to help you understand why your signal is what it is on
the air.

2. When I talk to other hams, their vertical antennas often do not
live
up to their expectations. Verticals seem more suceptible to vagaries
of
poor local terrain than wire or beam antennas (which can be raised
above the terrain where the vertical almost always has to be mounted
on
the ground).

3. Radials are the "other half" of a vertical antenna. A poor radial
installation lowers antenna resistance and therefore efficiency. Many
watts into the antenna yields just a few radiated watts. A "
no-radial"
vertical must be bending the rules and paying the price, I think.

4. My guess is that "no-radial" verticals use some form of a
counterpoise to capacitively couple to the ground. How well this
actually works, I can't say. But it flies in the face of the lttle
theory that I know and I am suspicious.

Caveat emptor. If I was you, I would go carefully before actually
spending any money.
Good luck.
73, Don Merz, N3RHT

Subject: Antenna evaluations: No-radioal Verticals

Jim,

I have been using a Cushcraft R7 vertical antenna for almost 10
years.
It
does use counterpoise radials (a group of 7 stainless steel wires
sticking
out from the base). No, it doesn't work as well as a beam, but I have
worked
DXCC with it and for the price, it is a super performer. I swear by
it
more
than at it! The R7 isn't made any more, but has been replaced by the
R8
which does 6-40 meters.

AES sells the R8 for $400.00. More information about this antenna can
be
found at http://www.cushcraft.com/amateur/r8.htm

If you have a thick skin and know how to talk tough, you can
post this on rec.radio.amateur.antenna. Eventually, you should
get some pretty good advice.

In Chicago, in the late 50's, it was State Street, from about 12th Street to 16th Street. Even had aircraft surplus stuff there. Maybe the cluster of surplus joints was related to Hallicrafters old plant being close to that spot.

Zack's and SF Radio on Market Street in San Francisco between the 1000 and 1400 blocks - latest ham gear, parts and good advice. Also lots of surplus stores - one in particular was Standard Surplus at 1000 Market...the dark damp basement with submarine battery cases, rusting dynamotors and old radar sets - and the thousands and thousands of FT-241 crystals in the big wooden bin with none in a ham band. A new 304TL was 50 cents in the carton and a new aircraft altimeter could be had for $8. $29 for a sealed box ART-13. Harry the Grouch took your money and eyed you with suspicion like you were the Pope of Shoplifters.

All you find in surplus stores nowadays is computer (s)crap.

In the year 2050, someone here will ask "What processor and operating system did you run when you were a kid?"

2679. FS: R-390A 1960 Vintage Stewart-Warner

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-06 00:00:00 UTC
From: Bill Tobin <wjtobin@uplink.net>
Message-ID: <%PrD5.21156$XV.1173110@nntp3.onemain.com>
Source record: 60556

Hello Group,

I have a 1960 Stewart-Warner R-390A receiver I am considering selling. Here are the details:

Mainframe: Stewart-Warner 1960, ser. # 835
Pwr. Supply: Stewart-Warner 1960, ser. # 3806
AF Deck: Stewart-Warner 1959, ser. # 322
IF Deck: Motorola 1956, ser. # 6531
Osc. Deck: Stewart-Warner 1960, ser. # 5217
PTO: Motorola 1956, ser. # 770
RF Geartrain: Stewart-Warner 1960, ser. # 3961
RF Main Deck: Stewart-Warner 1960, ser. # 3760

Remanufactured 2/16/99 by Rick Mish (the master!). He performed a solid-state mod for the ballast tube and replaced C606 and C603 with modern components. Power supply does NOT have solid state mod. Line level meter is original, but carrier level meter is a reproduction (a GOOD one!).

Radio has been completely rebuilt from scratch, and the front panel and knobs have been repainted (gray/black). Minor nicks on two knobs. Top and bottom covers are original. Tube shields are all IERC or equivalent.

Only caveat is that the radio has drifted slightly out of alignment.

Buyer will also receive Technical Manual reproduction and Operators Manual reproduction. Also included are PL-259 adapters for both antenna inputs.

When I bought this radio, it was a Cadillac. Rick transformed it into a Ferrari. A simple alignment will have this radio performing as new, with sensitivity measured in tenths of a microvolt (probably around 0.15--that's a guess).

I have invested around $1100.00 into this radio, but all serious inquiries will be considered.

Reply to: wjtobin@uplink.net

Thanks, and 73's!

Bill Tobin

Larry,
Just finishing one myself. Refinishing and recapping et al.

Problem I'm having is that it draws almost 1 amp in current and no sound unless I put 400 cycles into the audio stage and then the push pull tubes really drive the speaker. Somethings wrong in the OSC section, I think. I've replaced almost all of the 0.1 uf and 0.01 uf caps. Many resistors were way out of spec. You'll have to resort to old "dogbone" style resistor charts to interpret the values.

I'm into the mica caps now looking for leakage or shorts. Sure pays to have a cap checker!

The dummy plug is an octal plug on the back chassis. (not the speaker) It may be there but it has such a low profile you may not have noticed it. It is right next to the speaker plug. Several of the pins are shorted to jump various voltages from the power supply. The schematics usually show this plug and how its wired. You can actually put another one in its place so wired that the rcvr will run off of DC.

I also just acquired the 2-40D which is very similar.

If you have any questions, let me know. Long live the catacomb!

I just saw the results of an HT44 and SX-117 on e-bay

Tube type, yes, but not quite old enough to be "vintage". They went for
$785.
As they are not rare, there sure must have been a lot of nostalgia with that
one. <:-))

Have for sale the following, manufactured by Rycom Instruments.
2 pcs. - Model 3121A - Selective Level meter - (LF receiver.)
Frequency ranges are - 1.0-300khz, 300-700khz, 700-1500khz
Modes are - AM and SSB/CW
Selectivity is 6khz and 250hz
Has built in attenuator, external antenna jacks/terminals, speaker and level indicating meter.
Very interesting portable receiver for LF operating. - $50.00 each plus shipping

1pc- Same as above but model 3121B . Appears to be a slighly newer unit. $60.00 plus shipping.
All units are fully functional and look good. Used by broadcast tech's and telephone tech's.
JPEG available upon e-mail request.

Where was your radio row when you were a kid??

I think NYC was Greenwhich St.
Philadelphia ..Arch St.

Wilkes-Barre, Pa. S. Main St.
Plymouth, Pa. between Al's Hunlock Gas Station and St. Mary's Cemetery

Scranton, Pa...??

I wonder where it was in Hollywood, Calif. or Detroit? Did Seattle
even have a radio row?

Best wishes,

Radio Row back in the 1950s in New York was actually Cortlandt Street in lower Manhattan. Both sides of the street were lined with radio stores from the Hudson River up to Greenwich Street. A number of radio stores were on nearby streets, and to some people the whole district for about four or five blocks was collectively called Radio Row.

Some of the stores in the area included Arrow Electronics, Leeds, Federated Purchaser, Harrison Radio and Leotone (with its famous rack of tubes outside and the sign that said: Tubes 5 cents. Guaranteed to Light.)

And a "radio row," at least in New York, was a place where radio stores were lined cheek-by-jowl up one side of the street and down the other. Competition was fierce, and you could go from store to store arguing to get the best price on a major piece of equipment, playing off one store against the other.

As teenagers, I'm sure my friends and I drove some of these shopkeepers crazy, walking in with a list of parts for whatever project we were building, and having some chap behind the counter run from one end of the place to the other looking for a 15-cent resistor.

New York's Radio Row disappeared when the World Trade Center was built.

Ahhh I was one of em LOL.....(but in the early 70's) After driving them
nuts on Cortlandt we would head
up to Canal and that guy in Ramco would run to take lunch.
Now its all gone beside some cool hardware surplus joint on Canal, what a
shame.....
My grandmother locked my grandfather and my self out of the house when she
saw us coming home from the subway with the Tecktronics 555 and R-390 in the
wagon from that place north of Barrys.
"MOMMA MIA....."NO MORE DA THIS SH** IN DA GOD DA** HOUSE you both are
going to get electrocuted one day !
This happened many times

Ah yes, Cortlandt Street. My buddy and I had to take the Erie Lackawanna train to Hoboken and then catch the PATH "Tubes" into Manhattan. The sheer volume of available radios and parts would be difficult to describe to someone who never saw it in person. I bought my first telegraph key there as well as a number of tubes and other parts
841 Federal Building at 641 Washington St was an intimidating phrase to a 13 or 14 year old. The uncomfortable wooden desks, the headphones with frayed cloth insulation and the grumpy old (they seemed old to me) men doing the testing raised the level of difficulty. All are fond memories now some 40 years later.

When I was a teenager, Radio Row in Glasgow (Scotland, UK) took in an area of about 1 square mile, from the Barras (Pearsons, for example) to Stockwell Street (RME Supplies), as well as taking in Paddy's Market, in Shipbank Lane, where a lot of things could be bought (caveat emptor). Pearson's still exists, although the halcyon days of government surplus boatanchors have long gone. A Tandy shop exists in Renfield Street, Great Western Road has a branch of Maplins, Tait Electronics has its premises to the west of Townhead, in the vicinity of which can also be found RS Components, who tend to cater for trade only.

2742. CC-AWA Greensboro Fall Swap Meet

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-07 02:39:10 UTC
From: Ron in NC <kc4yoy@pop.trellis.net>
Message-ID: <01c03008$90b61ea0$084996d0@ron>
Source record: 60571

Mark your calendar now for Saturday October 28!

The CC-AWA Greensboro Antique Radio swap-fest is shaping up to be another big
event. The heat of summer will be over - the leaves will be turning - we'll
be getting ready for Halloween... Ah, but the true collectors will be
heading to Jamestown, North Carolina for a quiet stroll through City Lake
Park, looking for radio treasures and catching up on old times with old
friends.

For those who haven't attended, City Lake Park is located along Greensboro -
High Point Road. Jamestown is the small town that connects the two, and the
park is situated on a lake, so it's a nice setting that time of year. We're
able to use a long parking lot as our vendor set up area. It's located next
to a small gym. That's where the restrooms are, and in case of rain, it has
a covered loading area so everyone can set up inside and out of the bad
weather. If the sun is shining (and it always has been...) this is the
perfect location for real easy-going "tailgating" like we all used to do
years ago. No big set-ups needed, just the stuff that's lying around or
radios you're starting to get tired of. Remember heading to the Holiday Inn
in Monroe? Before eBay, before the collection worked its way into every room
in the house? Yep, those were the days. So toss a couple of radios in the
car and be there early!

The gate to the park opens at 7 AM ... and there's always a line waiting to

get in at that point. Due to the small amount of manpower (usually one)
there's no holding back on sales - so the early birds get the wireless
worms!
The cost to set up is minimal, and there's never a charge if you're just
shopping. Most people stay until at least 10:00 or 10:30, then the trunks
start to close, the deals are finalized, phone numbers are exchanged, and
folks head down the road. The last car usually pulls out by noon. It's a
fairly short day, but we've all seen some great buys and some great radios
change hands during the fall meet. Remember the catalin set for $5? I
didn't get it, but another quick thinker did. Might be some more treasures

ready to crawl out of another collector's garage.

Take a moment and mark it down -- Saturday, October 28 -- City Lake Park in

Jamestown, NC. Off I-40 in Greensboro, take the High Point Road exit.
Head
west (toward High Point) 7.5 miles and the park is on your right. We're in

the parking lot behind the pool, which is visible from the road.

Any questions? Need further directions or motel suggestions? Contact Brad

Jones at 336-547-1919 or BandTJones@aol.com

Hi Guys;
I am parting out a Johnson Ranger, It has a few parts left like the Tank circiut, all controls, Escutchion(?) & Dial w/pointer, most underneight components like xtal socket, mod xformer, small xformer behind the meter hole!
There are NO TUBES or power transformer or cabinet at this time.
Please e-mail me with what you need, i'll check the radio and let you know if its still there and then we will discuss the cost with shipping.
All items are as-is because the rig is non functional at this point.

2746. Re: Radio Row

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-07 03:42:45 UTC
From: Stu Cohen <stucohen@gte.net>
Message-ID: <UYwD5.4095$Nc5.393861@dfiatx1-snr1.gtei.net>
Source record: 60574

Ah yes... Radio Row, that was the start of a career in electrical engineering and a vocation for me.

In New York City it was Cortlandt Street, but there were shops on Vessey and Canal, too. I well remember taking the NY Subway from Queens to Manhattan, changing from "F" train to "D" train and walking from Chambers Street. I was 12 when I first went there and it was captivating, indeed. Barrels of parts (capacitors, resistors, transformers, chokes) would be outside. We picked up a handful of "stuff" and went inside, where the proprietor weighed what we brought in and assigned a value based upon weight ($1 a pound comes to mind). The bigger items required dickering and were almost always cheaper for us when we pleaded poverty as kids on a meager allowance. There must have been implicit trust, as it would've been easy to take a component or two and just walk off... but somehow, I think that didn't happen.

Who can forget Leeds or Barry Electronics or Harrison on Greenwich? I remember buying ARC-5 transmitters brand new, still in the original fungus proofed carton for $5.95. And J-38 keys... we see them on eBay now for $50, they were brand new in boxes back then for $1.50. My mom bought me a J-38 and a copy of "How to Become a Radio Amateur", and that was it. A converted ARC-5; a home-brew power supply from those barrel parts and I was on the air... never mind the TVI; the neighbors would have to wait!

Washington Street wasn't far away. Remember the 748 Federal Building at 641 Washington Street in lower Manhattan? I don't know how I'm able to recall that... it just stayed with me all these years. That's where the FCC tests were given, on the 8th floor, I think. No mail tests back then, you had to take them in front of an FCC Radio Inspector who was quite intimidating to a 12 year old kid. There was a Morse tape reader for the code tests; your hand shook when "copying" the code. You knew you'd passed the receiving test when the Inspector handed you a well-worn paper and asked you to send some of that text. He wasn't critical about your sending... the receiving was what really mattered. You either came home on the Subway singing or glum, but what a feeling of accomplishment when you passed!

Ah yes, Radio Row... quite an adventure, but now history.

Source record: 60500

Hi Gang,

I attended the Rock Hill hamfest yesterday and managed
to ring home my first BC-348 after over 30 years of collecting.
It looks OK no mods at all, original paint.
The question is it's a BC-348R, still had the dynamotor
inside and is marked 28VDC.
When I pulled it out of the cabinet I found the tag in the back
if the cabinet says BC-348Q. What's the difference in a
Q and a R BC-348.

73,

Ron

Dan,

I had a TH-315 and Yaesu 727 and several other HTs all without manuals to figure out the dual function keys. I got from HRO a book Called the Lost Users Manual and it had all of mine including the TH-315.

Good luck and enjoy your 315 it is a great little 220 rig.

I have for sale a Heathkit HW 5400 in excellent condition physically as well as electricaly. This radio will work 80 - 10 meters including WARC @ 100 watts output on 80 - 12 meters (fully adjustable from QRP up) and 80 watts on 10 meters, it has the direct entry keypad. It was recently on Ebay, I pulled it due to a competing auction, unlike the radio on Ebay this has been my personal radio, it does work great has seen no abuse or smoke, and has allowed me to work everything I could here as well as the $5,000 rigs. Anyone wanting to hear the rig on the air, I'll attempt to work a sked with you if at all possible. It comes with a D-104 mike and a noise cancelling mobile mike. I am asking $250.00 plus shipping to your location.

Thanks for your time

Richard

Some of the 40s and early 50s Brit Black and White war and spy films actually made use of CW at a slow rate and while I cant remember the film, one in particular actually had code being sent and received that went with the words in the plot. I sometimes copy the blinker lights on ships in old war footage..At least I copy the letters when I can. Any others note real CW along with real static in films

Steve:

Although no connection has ever been confirmed, no genuine Wouff-Hong's have ever been discovered that were made after the death of Hiram Percy Maxim (OM). I understand that the only true Wouff-Hongs are cw, and none were ever made for am or ssb.

There is a rumor, which is unconfirmed, that although most Wouff-Hongs are single ended, one push-pull version was made for a special event. It was stored and may still be in storage. Most of the surviving Wouff-Hongs are in the NE, but I do recall a photo in QST many years ago of a cactus Wouff-Hong in the Sonora Desert.

I also would like to question why you want one of these and am concerned that you are only trying to acquire it to put it on e-Bay.

The Wouff-Hong chant can only be repeated to new inductees. I know the OM was authorized to make the chant, but I do not know who that was passed on to. But, I think the original is still back at the ARRL and recommend that you take a trip back there, with one of the electronic stud finders. Plug a pair of high impedance earphones into the stud fincer, place it next to the crotch of the Wouff-Hong and listen for further instructions.

For complete information, try www.wouff_hong.com.

Art:

Chicago is laid out primarily on a Cartesian coordinate system, with a major bus route at every mile interval. In the late 50's - early 60's, you could pay one bus fare (they had student tokens that cost 12.5 cents each; adult fare was 25 cents!) and get a paper "transfer", and use that transfer all day long just as long as you progressed in one major direction. With a bit of planning, I could ride 12 miles toward the downtown area, with a stop at the State Street surplus area.

Then, at the west end of the Loop, I could hit Newark. Newark was in an old, wood-floor commercial building and they had bins of electronics parts stacked along the floor. There was always this one same (really) old lady who worked the cash register at the front door and eyed all with great suspicion. At that time, Newark was a dump; never would have guessed it would grow to its present stature!

Then, I could buy another bus fare, again with a transfer, and take the "El" straight west about 4 miles and get off almost in front of Allied. Allied was a much more polished operation, and also had row upon row of parts bins. (Later, they moved all the open stock back into the warehouse, leaving the floor area to boxed items, stereo, CB and a few stand-up counters, where you were expected to write your own purchase list using Allied catalogs.) Allied also had an adjacent Ham shack area, with a good selection of their own Knight equipment and trade-in items.

After Allied, you could then walk across the street to an Olsen's Electronics. Their stock was more consumer oriented (I'm still using a pair of 12" coaxial speakers that I bought from Olsen's in 1965; guess I got my money's worth out of them!), but still worth the walking. Finally, I could head home, using that transfer. The return trip took me two busses, 12 miles, and about 90 minutes. A full days expedition of 25 miles for only 25 cents transportation cost!

As time went by, the State Street area withered into auto recyclers, Newark changed into a distributor business mode and Allied also turned their focus toward commercial / industrial distribution. The surplus scene (that I knew about) moved out towards Midway airport along Cicero Avenue, but by then my focus had moved on to cars and fast women (or maybe it was fast cars and women). <grin>

2767. James Bond and Boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-08 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20001008074050.04428.00000914@ng-mf1.aol.com>
Source record: 60666

TNT TV is running all the James bond movies. Last night they had "Dr. No", which had quite a number of boatanchor radios clearly depicted.

The transmitting station in Kingston, Jamaica consisted of a GELOSO ham-band transmitter and Eddystone receiver (830, I think). The receiving station back in London, had a dozen Racal RA-17s lined up in work stations...two to each intelligence operative...not bad.

The Brit agent in Jamaica used a three letter code to reach out to London, which also had a three letter call sign. As the agent was killed while transmitting, London immediately changed call signs and frequencies, according to James Bond when discussing the radio link later in the movie.

Of course, operating in the ham bands was probably illegal, then and now, but these guys had licenses TO KILL, so nobody objected.

In fact, there was no QRM at all! No path fade, no atmospheric noise. A really clean link.Say, you don't think they FAKED IT, do you?

2768. Radio Row Rythm

Newsgroup: rec.radio.amateur.boatanchors

Ham gods dealt on busy Radio Row
Collins was nice, but too much of a dream
surplus, kits or used gear was more in scheme
Only one more part to make a shack grow

Twin lead or Co-ax, a tradeoff pondered
The then esteemed league Bible consulted
Using both hands, I was taught when jolted
Lessons learned as my lusting mind wandered

A special rock, DX contacts to be gained
Grinding a crystal with ajax lotion
In that damaging figure eight motion
Ruined mom's mirror, she never complained

Strange goals, off to the dealers we would go
An occupation from radio row

heh, heh, my mom would get a kick out of that, she still runs my Artco Electronics store in Kingston, Pa and we have old warped wooden floors, but of course we don't equate her with that suspicious old lady, but we have noticed that protective eye mode at many places.

I loved receiving those catalogs, and I would read every page. Also on Newark, I still have a few of their big thick catalogs around. I wish Shack had never bought Allied, and also I am sorry about bad management at Lafayette to have lost that dealer right after the CB Boom; they should have been able to roll along pretty good after that, but I heard they really had negligent head office control. Uncashed checks pushed back into drawers, etc.

I started dealing with Vanco on Lake Shore Drive in the 1970's and also occasionally from Mid-America (surplus parts). They both declined and now Vanco owns remnants of Mid-America. I also dealt with

American Electronic Parts, earlier they were affiliated with Olson and
Herald Electronics, but now I'm not sure where they are.

but by then my

This has been one of the most entertaining threads on this newsgroup in
a long time. I became of "radio age" in Richmond, VA in the late 1960's
and we did not have a radio row. But I remember people talking about
the one in New York.

Thanks to everyone who shared their memories.

Source record: 60672

Wanted----original hand microphone for the Lafayette HA-460 six meter AM transceiver. I would guess that the same mic was used on some of the Lafayette CB radios from that era. It is gray in color, with the Lafayette 'L' logo plate in the center.

Also need the frequency tuning 'dials', with all frequency markings intact for the same rig (both VFO and receiver dials).

Thanks

I became interested in radios around 1970 when I was 12 years old. After a short stint in CB, I picked up my novice in 1973. Every Saturday I took the bus into downtown Pittsburgh for my weekly piano lesson. Afterwards, I always paid a visit to Tydings Electronics which at that time was located on Liberty Ave. A gentleman named Ed Lipps, W3BWU, was the main ham that worked there. I just looked him up on qrz.com, but the call is inactive. I don't know if he has passed away or not.

The one side of the store contained the Boat Anchors (as we'd call them today). I vividly remember that B&W 5100B which a short time later became my first transmitter. There seemed to be a bunch of National gear always there, and a nice supply of older Drake equipment. The bottom shelf next the the cash register had gobs of old QST magazines, and I managed to buy several years of them (all 1950 and 1960's vintage).

The other place in Pittsburgh that sold ham gear was located on Penn Ave, several blocks away from Tydings. I can't remember the name of the store, but it sold Collins equipment.

I think those were the only places in downtown Pittsburgh that sold ham gear. Not much of a radio row, but it was cool to visit Tydings each Saturday!!

That's about the time our First Lady, President Ford's wife had a CB license, and there was an uproar about her not waiting long for it, or paying $8.00 or something and then all of a sudden FCC made the licenses free.

Mark, did CW ever interfere with you piano lessons? When you heard Beethoven's
Di Di Di Dahhh, what did you think? I used to hear morse code, even in dripping water when I was learning it.

I used to have mostly Hallicrafters, but when I dial cord broke, I looked longinly at that Gray stack of Gear driven National's (or am I thinking of Hammurlund?)

>
> I think those were the only places in downtown Pittsburgh that sold ham
> gear. Not much of a radio row, but it was cool to visit Tydings each
> Saturday!!

SATURDAY!! That was the day all the hams circulated and there weren't many loners, usually the hams were in groups of two and three and then they would congregate in the store in groups of 5 or 7. Then the CB boom came and it was 7 Days a week, but after that fizzled and everybody jumped on the computer bandwagon, Saturday stopped being a popular day. Also I hardly ever see as many Father/ Son Grandfather/gson or Uncle/nephew combingations coming in as often as they used to, and I think that's some of whats wrong with this country now. These Saturdays out,
a lot of human bridges were built.

Best wishes,

Art

In Denver,

It was CW Electronics on 800 Lincoln Street. Place was filled with radio gear! Got my key and Ameco Code Record there for my 14th birthday. Studied hard and went to the Federal Blding downtown. Passed the Novice then General on the first tries! Told my dad I would never EVER use the code again! Nasty Stuff! That summer I made enough money mowing lawns to buy a really used HW-16. When I showed my dad that night, I told him I would soon have enough money for a real SSB radio - possibly even a Collins.

Well sir, CW Electronics moved all the ham stuff upstairs in the 80's to make room for all the computer stuff. You really had to look for it. Late 80's, all they sold was computer stuff and dropped out of electronics entirely. By the early 90's, they closed their doors for good. I don't know exactly when.

Well 28 years have passed. Dad passed away two years ago. Most of downtown Denver has completely changed, and me?

Well, I moved away to Dallas but still kept the same 28 year old call.

But some thing's never change. I ONLY use CW now! - and yes, I do it on the same HW-16 I gotten 28 years ago. I really don't know why I kept it but now I am sure glad I did!

Never did get that Collins though - :)

Does anyone else remember CW Electronics in Denver?

After collecting old and interesting communications receivers and other radios for the last ten years or so, we are shifting out attentions to other hobbies (camping and vacuum tube stereo). Therefore, we are placing most of our radios and some miscellaneous parts and test equipment on eBay over the next few weeks to gain maximum exposure. We have attempted to find a buyer for the entire collection, but have been unsuccessful; we would have preferred to do it that way.

Rather than flood the NGs with FA notices, I'll just post the link to my seller's page...you can check in from time to time to see what's new. We will probably add two or three pieces each day. Here it is (you may have to cut and paste it into your browser):

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewListedItems&us
erid=boatanchors&include=0&since=-1&sort=2&rows=25

As a sampling of what is or will be there, here are some of the pieces:

JRC NRD-515 with 96-channel memory unit, speaker and keypad
JRC NRD-505
RME 69 with speaker
Racal RA-17c with RA-121 ISB adapter and cabinet
Marconi CSR-2 (extremely rare Canadian rx)

There will be many more radios including bakelites and interesting portables. Please do not write asking if we'll sell an item ahead of posting on eBay...thanks very much. We'll be happy to answer questions about all of the items once they have been posted...contact info will be in each ad.

Carter,
I have a Simpson 261 Series 2 which uses 1-D cell and 4-AA cells. Two of the AA cells are end to end at the top of the meter and the other two are located one on each side of the meter. All 4, as you mentioned, are in series.

Sorry, no other information on the "SR" version that you have.

Good luck,
Rick

> Mark, did CW ever interfere with you piano lessons?

Nah -- the old prune would never let me whistle CW whilst I played !!

> When you heard Beethoven's
>Di Di Di Dahhh, what did you think?

I thought I'd better get the piece right, or the Wrath of Prune would decend
up me !!
That was one tough old prune that taught me!!

>I used to hear morse code, even in dripping water when I was learning it.

I used to whistle the license plates on cars.

I didn't get my first receiver or transmitter until about 2 months after I
got my Novice.
I used a cassette tape to learn the code, and a cheap Lafayette Radio
Electronics
code practice oscillator (with the gawd awful buzzer...) to practice
sending.

Interesting story, slightly off thread, but what the heck.... My parents
didn't like the idea of an outside antenna at all, so from about Nov 73
until sometime in the spring of 74 or so, I had to improvise. My first
attempt at an antenna was just to use a long piece of coax hanging out my
second story bedroom window. It had to be pulled in after use of course.
Well, obviously I didn't quite grasp the concept of SWR yet, and the
mismatch was absolutely horrid. Now, remember, the B&W 5100B had *metal*
knobs!!! Suffice it to say, it was a shocking experience. My parents
would not relent for a while. So, I had to use my mom's rubber
loves(that she used while washing dishes) during tune up!!! The next
summer, I was granted permission to put a vertical up; the radios went in
the basement, and tune up got a *lot* better!!

Ah, the good ol' days.....

> I learned to eat my first meatball sandwich at that place!

I was from the coal mining region of NE Pa. and sometimes the cars we used to get to NYC never made it, but I did eat meatball sandwhiches there, bought a beermug with a built in whistle, everybody advertised cigarettes for something like $1.99 a carton and a few of the meatball places also sold "coconut milk" I worked for Western Union a few months and then headed south & sold Bibles in Mississippi (wrong time, wrong place). I had Penna. tags and it was the beginning of Civil Rights problems. In my Corvair was a heath Cheyenne and Commanche mobile twins.

Yes, I remember the crabby old guys up there, they were OK with me, but my buddy abbreviated a few things on application and they were crabby with him. I remember looking out the window and seeing the ships steaming along. I don't remember the name of the examiner, but when I had my Technician changed to General in the Philadelphia Custom House, it was Roger Phelps.

Like the gent from Arkansas, we did a lot of ad reading, and one of my catologs was Olson's, I think they were from around Pittsburg (BTW, Pittsburg must have had some good ole radio row). Also Boston, I dealt with Fair Surplus Sales.

Yes, I remember the 304TH's & 304TL's. One time I drove to N.J. and sold some of these tubes to Ted Dames for about $30.00 each.

In Boston, when RS had about 3 stores, I went to 730 Commonwealth Ave and traded some ham gear to Art Bates.

Thanks for all the memories, guys

Art

For sale

Drake 2-A Classic Receiver with noise blanker. Superior condition.
One crystal needs replacing for 15 meters. Otherwise complete and in
excellent operating condition. Pictures available.
Will sell for $265.00

Turner PLUS THREE desk microphone. Amplified, with coil cord, locking
PTT bar.
Very good condition. Will sell for $32.00

Heath HF Station consisting of: Heath SB-102 transceiver,
Heath SP-600 speaker, Heath HP-23B Supply, Heath SB-620
Monitor Scope, Heath SB-630 Station Monitor
Interconnecting cables provided. Pictures available.
Will sell all as set for $600.00 firm, plus shipping

ME-57 A/U Modulation Meter for 20-1000 Mhz.
Good condition. No manual, but easy to operate.
Will sell for $150.00

TS-418 C/U Signal Generator. Good condition.
Manual included. Will sell for $150.00

Microphone goose neck 12" long with mounting flange for
operating bench with three screws.
Includes microphone adapter for typical vocal mic.
Great for any AM station etc.
Picture available. Will sell for $15.00

CDE AUTOROTOR control unit. Model AR-30 / AR-40
This is a 5-wire controller that will work with several rotators.
Excellent condition. Picture available. Will sell for $18.00

MFJ VHF Wattmeter / SWR meter Model MFJ-812B in excellent condition,
with manual. Picture available. Will sell for $23.00

B & W Low Pass Filter FL-10/1500 Rated for 1500 Watts, with SO-239
connectors.
Looks really sharp, unused and in "as-new" condition.
Picture available. Will sell for $25.00

RARE Yaesu FF-501DX Low-pass filter. Matches the FT-501DX HF
Transceiver.
Black colored with fins. Would also be sharp-looking with the FT-301
series.

Looks like new. Picture available. Will sell for $22.00

Drake Low-pass filter. Model TV-100LP with the nice copper finish.
Has standard SO-239 connectors. Rated for 100 Watts up to 30 MHz.
Picture available. Will sell for $12.00

B & W 6-Position Antenna switch by Barker & Williamson
Model CS-6G in excellent condition. Really nice unit.
Will sell for $35.00

E.F. Johnson lamps. Part number 549-3001-003
QTY 2. These are the little pilot lamps with solder leads.
They come in the original Johnson box which looks like it had
come with 12 in it originally. Picture available. Will sell for $3.00

Westinghouse Tube Portable AC-DC receiver Model H-557P4. Lime Green!
Unit is in good condition. Has 4 tubes and
operates on 105 to 120 V AC or use internal batteries for 67.5 V and
1.5V DC.
Interior is in excellent shape. Has familiar 1U5, 1T4, 1S4, 3V4 tube
line-up. Needs a new 1T4 as it does not work, and has a hum through
the speaker. Picture available. $35.00

Lafayette Tube Tester, model TE-55. Nice little compact tester
in a vinyl covered case. Very good condition. Needs documentation.
Picture available. Will sell for only $20.00

ALDA 103 Vintage Solid State HF transceiver for 80, 40 and 20m SSB and
CW. 100 Watts output. Excellent condition, with original manual and
microphone. Pictures available. Will sell for $180.00

Free: SMALL CHASSIS BOX 5" X 2.25" X 2.25" with cover. Has one
octal socket and one transistor socket installed. Homebrew project
"W3WN BAND SPOTTER." Includes slide ON-OFF switch and battery clip.
Yours free.

Shipping additional on all items.

Yes, I was the old guy at the Shelborne Hotel in 1976 (36 years old, I had 2 stores one of them was a Radio Shack Franchise, I went to some of the wine and cheese parties, Gates and Jobs were just getting started. The Apple was in a real wooden Apple Crate. Some of the people there misunderstood me about my Radio Shack Store and the word circulated that I was the "Man from Radio Shack" Some of them sucked up to me, but when they found out I was just a little store keeper, they dropped me like hot potato.

I bought a few SWTP 6800 kits, and then supported the Z80 Zilog chips that would soon be Radio Shacks TRS- 80's. The model 100's would be a good thing for these Palm Devices to emulate. A nice little LCD screen and a full size typing keyboard. I had a good time with the speedy built in 300 Baud Modem.

Best wishes,

Art

2800. Wouff-Hong wanted

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <39DFC9CB.456D56BD@home.com>
Source record: 60658

Hi

Please,&#65533; I need a Wouff-Hong.
Prefer one that is CW only (although CW - AM) is acceptable.
No SSSC .

If your Wouff-Hong is reasonably priced (almost free!)&#65533; I would like to
have it.&#65533; Also, if you know the ceremonial speech that accompanies the
issuing of a Wouff-Hong initiation - sure would like to know about it.&#65533;
There are several hams around here that need the threat of a near by
genuine Wouff-Hong.&#65533; Your kind help would be so much appreciated.

Please state condition, terms, prior liens, history, whether or not it
is spark, cw, or??, and prior amount of use.

Thank you very much.

Steve

Source record: 60659

Steve..I know of your situation, I just picked up an HA-460 with no cables and finally found someone who could help me with the wiring.

Here is the wiring requirement for 115VAC.operation. I don't have the 12VDC wiring yet. Let me know if you come across the 12VDC wiring for this rig.

115 VAC to pins 1 & 3
Jumper pins 4 & 5
Jumper pins 8 & 9
All other pins left open.

Looking from the backside of the rig, pin 1 is the first pin clockwise from the plug key/guide. This pin is at about the 10 o-clock position.

Have fun, this rig works well. Check to see if you have any tubes (i.e. the audio output) that run with a red-hot plate. This is a common HA-460 problem.

Also, if you run across a spare set of tuning (VFO, receiver) dials for the HA-460, let me know. The frequency markings on mine have completely worn off. I will pay well for these.

Good Luck, maybe I'll see you on 6m AM. In the Cleveland area, we get on 50.550 on Sundays at 10am.

Emil
KA8GEF

2804. WTD - Manual for Sprague TO-5

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-08 05:09:06 UTC
From: jmullen@rockys.com
Message-ID: <39e000d2.5643130@unews.map.com>
Source record: 60662

Looking for manual or copy for Sprague TO-5 capacitor checker. Will pay reasonable photo copy charge or can photocopy and return (no, I won't keep it!)

Yes, I know I can buy them from a few of the sources, but I really hate paying $24 for a manual, I only paid $10 for the cap checker!

Thanks & '73...

Source record: 60445

Floyd, I've done these enough times I oughta know the routing by heart but it escapes me.
IIRC the best way is to set them resting on the bottom band (just barely). If you let them spring all the way where they want to be you'll never get them in sync.

First, eliminate any drag in the mechanism so everything moves smoothly. Lube the slides LIGHTLY with some Radio Shack teflon grease and make sure they're square and don't bind.

A hemostat works nice to pull the knots tight. Last time I did this it took the better part of a Saturday. It's no fun at all.

Hope this helps a little. 73 and good luck, John

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-09 00:00:00 UTC
From: Steve Williams <falcon@telenet.net>
Message-ID: <8ru2fo$bu7$1@newsfeed.logical.net>
Source record: 60447

How about the do it yourself approach. Go to your local home improvement place and get some spray in foam insulation, the stuff in the cans for filling those hard to get at holes. Then pack the radio in a good plastic bag and tape it shut. Put it in a slightly larger box with a few chunks of styrofoam as stilts. Then fill around it with the spray foam. Does the same thing but for the average home user is much easier.
Steve W.

From: Don <king1522@swbell.net>
Message-ID: <39E28CC2.75A4C45F@swbell.net>
Source record: 60448

I am attempting to restore a Collins 51J4. There are two tubes I am missing. One sits in slot identified as v115. The tube type is listed on the base. However in slot c217, there is no identification on the base. I think it may be some sort of capacitor. I removed these two tubes over 20 years ago and can't remember what they were or what I did with them. I'm not sure I made much sense, but I could use some help. Is there a place on the web with a schematic???

2811. R390 I.D. Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-09 00:00:00 UTC
From: phil@vaxxine.com
Message-ID: <39e1dab2.354886@news.vaxxine.com>
Source record: 60450

I've had an R 390 (or R390A) since 1985. I lost the tag from the front when I brought it home to do a panel cleaning back then. At the time losing the tag didn't mean much. But now I see that there is some sort of significant difference between a 390 and a 390A, some were made by Collins, some were made by contractors, some have the "/URR" suffix, etc, etc. SO, how do I figure out what I have ?

The VFO, mechanical filters and some of the transformer cans on the RF sub chassis have Collins marked on them. The power transformer doesn't have the Collins name on it. The manual that came with the machine says R390A/URR and its the military technical manual printed in 1957; doesn't mean they actually belong together but that's what I got at the time. So far, everything in the manual seems to match what's in the radio.

I started cleaning this up in preparation to sell it because it's been sitting around doing nothing for years. I guess the clean-up/tune-up is sort of re-kindling my interest in the thing. I think I'll still sell it but just not quite as quickly as originally planned.

Thanks in advance for any help.

Phil

Re: Other movies with real CW
The best one is the 50s British movie about the Titanic sinking, "A Night to Remember"....as I remember all the CW was correct including the Titanic's call letters, MGY. They also sent CQD at first and later changed to SOS. All the Marconic equipment looked very authenic too.
Another surprising movie is "Fantastic Voyage" - a sort of low budget movie about shrinking scientists and submarines and injecting the whole lot into an ailing human patient. The crew used Vibroplex Deluxe keys for communications to the "outside." It seemed like they were sending real CW.
I'm sure there are more......

Take the top off the radio. In the front right corner with the front of the radio facing you, there is a plugin board that contains all the regulators and voltage adjustments for the entire radio. There is one pot. adjustment for the 10 vdc used throughout the radio and others for USB, LSB, CW, RTTY. If I remember correctly, there are five altogether. Be sure the 10 vdc is set correctly, first. Then adjust the others. I can't guarantee this is the problem. However, in the 20+ years I had my TR-7, once a year, I simply had to pull the board out and reseat it. One or several of the voltages did not get off the board through the connector. If the PBT works, but does not receive/xmt without the PBT, this is probably your problem. Simple to fix if that's it.

As a high-school kid in San Francisco in the late '60s there were two or three stores on Market St. near 9th. My buddy and I would head down there on Saturday and rummage through the stuff, look in the barrel for FT-243 crystals close enough to grind to Novice-land, and generally bask in the ambiance. I bought my first 807 there (and still have it!). Then we'd walk a couple of blocks to the main public library and hang out in the science & technology stacks for a few hours. Great times!

I really enjoy hearing you guys talk about the various radio rows in their prime!

As a further update, let me now suggest that each London radio operator had one RA-17 and the matching transmitter known as the MA97. I didn't know until today that it even existed! They were obviously marketed together much like Collins A series, or the S series.
You can see how much it looks like an RA-17 at this site:
http://www.qsl.net/n4xy/transmitters1.html

Source record: 60534

Hi All,
I am getting ready to ship an SX28 and was wondering if there is anywhere in particular that uses foam in place packing. I am not too comfortable packing this myself, even with the stryofoam board type material. I have had very good luck having larger size receivers (NC200) sent to me this way. Anyone know anything about this???
rgds,
Mark S.,

I was first licensed as a Novice in 1962 and passed the General in November of that year. I was 15 then. We went in on the DeCamp bus from suburban Essex county NJ and then took the subway down to Christopher Street. Some friends were going to be tested for General in October, and I went along to try, but did not believe my code speed was quite ready. I got about 30 characters, and you needed 65 characters of straight copy.

The examiner was Mr. Finkelman, with his gray hair and glasses, green cigars, white shirt and bow tie. He was a tyrant who loved to scare kids. On my first try, there were about 12 guys taking the code test. After collecting and reviewing the copy, Mr. Finkelman called out the names of those who passed. Then he said "Everyone else...." and gave a Roman thumbs down..."You flunked. Get out, no waiting around, and don't come back for a month". In today's world, they would send him for some attitude reorientation.

I passed the second try. After you passed, you had to wait for your "ticket" to use your new privileges. Mine did not arrive until January 1963.

The desks and headphones were lousy, but the room had great arched windows with a great view of the Hudson River.

Today I go to VE sessions and see grossly under prepared applicants. Finkelman would have slaughtered them. I think it would be great to see a VE team bounce those under prepared applicants with some old Finkelman gusto!!

I got my receiver, a Hammarlund HQ-145X, at Harrison Radio in September 1961. After I passed the General, my father, who never was a big spender, bought me a used EF Johnson Viking Pacemaker at Harrison for $275.00 in November 1962. That was a small fortune in those days. I was the only kid in my high school on sideband.

Bill Harrison had a station set up in his store window, an S-line I think. When you walked in, you saw a great used section with all kinds of gear on shelves and on the floor, separated by manufacturers and models.

In Newark NJ there were two stores, Federated Purchaser and Hudson Radio. I forget which store, but I got a J-38 in the wax sealed box for around $3.00

2837. Rare Bugs For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-09 00:00:00 UTC
From: Harvey Laidman <harveyl@outadaloop.com>
Message-ID: <8rtg3g$fu3@dispatch.concentric.net>
Source record: 60541

I have acquired two rare semi-automatic keys ("bugs").
1. a Bunnell "Gold Bug" circa 1925. This key is in very good
condition for its age. It appears complete, might be missing the
"dot" contact which fits in a small hole in the mainspring.
2. a Eddystone bug - one of the few bugs manufactured in
the U.K.. Only 400-500 were produced in the 1940's and
'50's. Very good condition with some chipping of the wrinkle
finish.

2844. FS - WARC Xtals, ETC for Drake R4 Receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-09 03:42:28 UTC
From: kk4tl@aol.com
Message-ID: <20001008234228.08301.00001097@ng-fo1.aol.com>
Source record: 60513

I have the following crystals for the R4b / R4c, etc. receivers.

1.5-2.0 Coverage (12.6mhz xtal) - Covers 160 Meter band
$8.50 shipped CONUS (I have 2 of these)

28.0 - 28.5 Coverage (39.1 mhz Xtal) - Covers bottom of 10 meters.
$8.50 shipped CONUS. (I have 4 of these)

10.0-10.5 Coverage (21.1 mhz Xtal) - Covers WWV and 30 meter WARC band
$8.50 Shipped CONUS. (I have 3 of these)

18.0 - 18.5 Coverage (29.1 mhz Xtal) - Covers 17 meter WARC band.
$8.50 shipped CONUS. (I have 2 of these)

2845. FS - Drake 4 Line Crystals

Source record: 60514

Folliwing is a list of "other" crystals I have found here for the Drake 4 series radios. "*None*" of these cover WARC bands. I do have a few (2 or 3) for the bottom of 10 meters, though. And you'll find several that cover shortwave broadcast and utility bands. Price is $8.50 each shipped CONUS. Email direct if interested. I can email an Excel (xls) file is the list is not easy to read. Will consider package price for purchase of all crystals.

Hi there,

> TNT TV is running all the James bond movies. Last night they had "Dr. No",
> which had quite a number of boatanchor radios clearly depicted.
>
I was watching "For Your Eyes Only" last night.
In the last scene,
Bond was talking to the PM in London from Greece.
He was using his wristwatch!
and Q had a green radio and was relaying to the PM,
The closeup at the end looked more modern than Larkspur stuff,
but I didn't recognise it.
Any ideas?

John,
Before you go too far, this "counting up" is nearly ALWAYS caused by poor
contact on the digital board connectors. Take the screw out of the center
of the board (big board in the front center of the chassis top with cover
off), make a couple of "hooks" out of a coat hanger or similar and pull that
board up a bit, then reseat a few times. That should fix the counting
problem. However, if you have no voltage to PBT board afterwards, that's
yet another problem.
73,
Don, WB5HAK

Source record: 60471

FWIW-

I've bought two SX-28's. One was a case of how not to ship a radio and the other should have been used as a textbook on the right way. This may sound like a no-brainer, but make sure the chassis is completely bolted to the cabinet. The first one I received didn't have the screws in the cabinet bottom. The chassis slid around in the cabinet, doing some damage. I knew I was in trouble when I lifted the radio out of the box and the output transformer fell out on the floor. The second receiver was double boxed, the outer box made out of plywood. Everything was screwed down tight. The inside of the radio was packed with styrofoam peanuts. I believe this made a big difference as well. Since the tuning capacitors are completely enclosed, I didn't have to worry about any stray styrofoam getting into delicate areas. It was kind of a pain picking them all out, but it actually took less than a half hour.

>HAS ANYBODY HAD ANY DEALINGS WITH WB2FOU (MARTY DRIFT)
>BLAWENBURG, N.J....I WOULD LIKE TO KNOW

Hi there,

Marty's an old friend of mine... known him for nearly 20 years. He used to work with me here in Texas when we were both working for T.I. He moved back home to NJ several years ago. Marty is an honest dealer and a straight-shooter. If he tells you that a piece of gear works, it does. If if doesn't work, he'll tell you so. There will be no question about it. His assessment of cosmetic condition will be honest as well. In addition to being a Collins guy, he has one of the greatest collections of Heathkit ham gear in existence, and he's written a couple of books on that subject.

Try http://www.wa3key.com/51j4.html; you might figure it out
from the information there. Unfortunately Collins/Rockwell
made http://bama.sbc.edu/ remove their Collins manuals due
to copyright release problems.

Ranger I fans,
Back in August, I placed a message on this newsgroup about a new Johnson Ranger I that will put on EBAY in October, I have returned from my travels and I hope to have it on next week It is unused and does NOT have the box or original manual (I got a copy of the manual for it)--it is factory wired (the Canadian army does not buy kits!!!) and was purchased by the Canadian Armed Forces in the 50's along with many others.
This particular unit was a shelf spare and was never issued---it was surplused out in the 70's and grabbed up by a wannabe ham who stored it and eventually gave it to another ham who had no interest in it . When I received it, I could not see the tubes through the grill work of the case and being suspicious I opened the case--all I could see was the original packing which had become discolored to a dark brown (40+ years!!)and in amongst the packing were some sealed envelopes with the tubes and the rear mount plug and also a brand new ASTATIC JT-30 head-The JT-30 will not be included-----by this time, my camera was out. I will put some of these photo's on EBAY.
I have received several (4) un-solicited offers --some very small ($150) and some ridiculous high ones (000's). I will not answer these offers as I have already decided that the fair thing to do would be to let anyone bid and the highbidder gets it.
It does not have a repro SIMONIZ shine but rather the real original colors--The pictures will show the condition.

V115 is the 5V4 rectifier. C217 is the plug-in electrolytic, pin 1 common, pin 3 = 35 MF, pin 5 = 35 MF, both at 450 VDC. Unless you want to really thin out your pocketbook, replace the cap with a couple of tubular singles, 35-40 mf at 450 volts. Notice the negative lead does not go to ground, but to the center tap on the power transformer high voltage secondary. You were probably troubleshooting B+ problems. Check the resistance to ground of the B+ line (pin 5 of the cap socket) for low or short before proceeding.

I found originally I had no voltage to the pbt board,well after some
tinkering I come up with a new problem..no rcv/xmit and the counter starts
counting up from 18 mhz and will not stop. I guess I will pull up my sleeves
and get to work.

Message-ID: <39e2c366.26832021@nntp.mindspring.com>
Source record: 60463

hello
i spotted a "minerva tropic master" receiver yesterday at a
local antique shop. It was not in the best condtion. the cabinet was
in good shape and the little locks still worked. The power cord had
lost much of the rubber insulation. Inside the rxcr was very dusty and
even a wasp nest.looked like it had been sitting on a shelf in a
garage for 25 years.
anyhow, i'm not interested in the rig, but if someone is
interested i can help them get it. it looks like something that could
be restored.

Drake 2-line station for sale.

Drake 2NT transmitter
Drake 2C receiver

Both in excellent condition.

Pictures and full specifications available at:

http://home.cfl.rr.com/happysurfer/2nt2c.htm

This is a superior set, and includes a manual for each piece.
Also includes a spare final tube. Dow-key relay available.

Will sell the pair for $325.00

Please take a look at the web page for pictures and a complete
description.

Please remove the "NOSPAM" to E-mail me.

2900. paint for Hallicrafters SX-28 front panel?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-11 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <Pv1F5.1137$Ok4.53953@sea-read.news.verio.net>
Source record: 60421

Does anyone have a source for paint to match the front panel of a Hallicrafters SX-28? I looked at ALO's website (http://www2.southwind.net/~n0alo/) and only saw paint for the cabinet, which is a different color.

I can't carry my panel to an auto paint shop to get a match. A previous owner stripped it to bare metal and then applied varnish (go figure).

Thanks!

Try putting the peanuts loosely inside plastic grocery sacks and tying the sacks tightly shut. You can still form the peanuts into fairly small places, and you'll save the pain of picking out all the peanuts and staticky-clinging peanut fluff.

If you put packing inside the top, also be careful of the fussy gizmos that slide the band indicators up and down.

When you ship an SX-28, check the dial glass to see if it's loose. I bought one locally a few weeks ago. I hadn't noticed the glasses being loose when examining it. Half a block away from the seller's house, the glass was ringing and jingling like Westminster Cathedral. I stopped and stuck a couple of wedges of Kleenex next to the glasses, to make sure they got home in one piece.

2905. Re: Antenna evaluations: No-radioal Verticals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-11 00:00:00 UTC
From: mccrk@aol.com
Message-ID: <20001011160309.03837.00001561@ng-fu1.aol.com>
Source record: 60426

I don't have one of the veticals you mention, but I do have a Gap Titan which is capable of operation on all bands from 80 through 10. It has no radials, but it does have a counterpoise.

On all bands except for 75 I can get reliable results, and have worked much of the world with this antenna and 100 watts.

On 75 meters it is very unreliable. Some nights it works quite well, but mostly the results are pretty dicey.

I should add that I use a vertical because I have a very small lot and there's no room for a horizontal antenna.

2909. FS: Drake, National, Yaesu, & Hallicrafters + transverters!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-11 00:00:00 UTC
From: maddrewski@aol.comnukespam
Message-ID: <20001011173457.27047.00003280@ng-cg1.aol.com>
Source record: 60430

I have decided to part with a few toys and will post them here to let the "newsgroupers" have first shot at them (i.e., XYL started making demands!). All units will be as described, and photos are available on request.

Drake 2B w/2Q Multiplier and crystal calibrator. My personal unit, works great, very sensitive! Some of the switches are a bit stiff, but all are operable. Clean and clear audio. Original caps, just well taken care of. Some wear on the edges of the case, a repaint would get it to 100% but not needed for operation. No corrosion or mods. Always in a heated shack. $250

Hallicrafters S-94, 30 to 50 mhz. receiver. Works fairly good, I listen to Highway Patrol on 43 mhz, but haven't taken the time to go thru it. Good paint; spare tubes included. $50

National 6 meter converter. Saw one on eBay the other month, "rare, rare, rare!!" (that's what they all say). However, it is NOT a common piece! This one is one of the later units using the Nuvistor mixer. For the NC-300, I believe. Complete, not missing parts. $70

Yaesu FTDX 560 500 watt input HF boatanchor, good solid old tube rig, works well, extra finals. With matching speaker. Bought it thinking I'd have my General or Extra by now, but those 16 hr work-days get to you. XYL said "use it or lose it." Lots of receive hours on it, but STILL don't have the HF ticket yet (sigh) $350

Yaesu FTV-650B Transverter for the FT101 series. Yup, the "Rare" 6 meter unit. Works like a champ. Just don't have the FT101 anymore and the -B doesn't work with the FTDX series. $325 with cable and book (NOT copy).

Yaesu FTV-250 2 Meter Transverter for the FT101 or the FTDX series. Works like a champ but I have an Icom 2M all-mode now. $275 with cable and book (NOT copy).

All prices are packed, but less freight. I can ship via UPS, FedEx ground and USPS (caveat emptor on USPS and UPS). I recommend insurance on all shipments!!! As I can use our corporate shipping facilities, I can get the discounted UPS rate and will give an exact amount for shipping once I know the total weight/cube. I pack in bubble wrap, then peanuts, and in new boxes. Better to be a bit excessive on packing than risk a damaged unit!

All radios can be seen at the QTH if you're in/near the Greensboro, NC area. I will consider 6 meter all-mode trade offers up/down. PLEASE email pamsock<<at>>aol<<dot>>com for info, esp. over the next week, as I'll be out-of-country for a week (but will check email).

As for payment, I'll be at the Boatanchor Swapfest in Jamestown, NC on the 28th of Oct., for face-to-face transactions, or will do prepay. Sorry, don't do

PayPal (yet). Don't like the prices? Make me an offer I can't refuse. I really don't like eBay and would like to avoid using an auction service.

Andrew

Digi-Key does indeed have a minimum order...I just bought
some stuff a week or two ago and had to pad the order with
some excess junk. Maybe because I used a credit card or
something. I have a big order ready for Mouser and am
checking to see if their 12-pin is the same as what I need,
no pic in the catalog. I was kinda hoping to get a real
authentic used one from a real person, but my hopes are
dying.

John,

if you have modify the 10 volts, you need to realign the TR-7 (all the procedure). See in the servive manualo.

Regards,
JM CHERRY

I have ruled out the try and unplug and plug back in mode of fixing. I understand how the power supply board works. I have all voltages from power supply board to the pbt board but no bfo output. I made an error in diagnosis I do have transmit. seems as if the synthesiser came unlocked on receive but when I go to xmit it locks. so I will chase that problem first then go on to the bfo problem. if I don't get it I'll drop it out of the second floor than take all the filters , n.b. and accessories and sell it off. the c-line is a far better performer in my book and as long as the one here keeps working I am a happy camper.original post was meant for and to see if anyone had same problem in the 22 years these radio's have been around and help me short cut the circuit tracing and hair pulling and wife beating to find the problem. but I got a good head of hair and a tough wife so I think I'll make it. John

Hello,

I want to thank all who helped me with the Lafayette HA 460 Six Meter rig. All cap changes made and works great! Now to just find someone to talk to here.....

I have the following crystals for the Drake line

4 ea 38.1 27.0 to 27.5 $8 each
1 ea 39.1 28.0 to 28.5 $10

Add shipping to the above.

2952. Michigan Hams

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-12 00:00:00 UTC
From: helmsman <>
Message-ID: <1tecus88bv6fij5tmvp60fl2mao0knasop@4ax.com>
Source record: 60366

This is a call for action for all Hams that want to continue using their MOBILE radios, or even wish to transport their PORTABLE/HANDHELD radios in their vehicles without obtaining a special permit from the Michigan State Police.

On Sept. 27, 2000, Michigan Rep. Mike Kowall sponsored House Bill HB-6012 that amends sec. 508 of 1931 PA 328 (MCL 750.508). Co-sponsors to this amendment are Reps. Cassis, Julian, Shackleton, Birkholz, Howell, Scranton, and Tabor and has been referred to the Committee on Transportation.

Sec. 508 has been completely rewritten.

Subsection (1) states ...shall not either equip a vehicle with a radio receiver, or possess in a vehicle a portable radio receiver that receives...

Subsection (2) does not exempt Hams from the permit requirement as the non-amended sec. 508 did.
Subsection (2) states ...does not apply to a vehicle owned or used by an individual who has obtained a valid permit...
This permit requirement applies to Law Enforcement Officers and Amateur Radio Operators.

This is a bad Bill for Amateur Radio in Michigan on the whole, and especially for those attempting to provide a service to our communities. This is another hurdle which should not have to be jumped by the volunteers that give so much already.

Call or e-mail your State Representative today and let's put a stop to this foolishness. You can find your Representatives number in the phone book or by going to http://www.michiganlegislature.org/ and then scrolling to the "Links to Other Sites" "State House".

HB 6012 reads as follows:

(1) Except as provided in Subsection (2), A person shall not either equip a vehicle with a radio receiver, or POSSESS in a vehicle a portable radio receiver, that receives radio frequencies assigned by the federal communications commission for police purposes.

(2) Subsection (1) does not apply to a vehicle owned or used by an individual who has obtained a valid permit from the director of the department of the State Police on a form prescribed by the director and who is either of the following:

(A) a law enforcement officer certified pursuant to the commission on law enforcement standards act, 1965 PA 203, MCL 28.601 to 28.616.

(B) An amateur radio operator licensed by the Federal communications commission in 1 of the following classes:

(i) technician class
(ii)Tech Plus class
(iii)general class
(iv) advanced operator class
(v)Amateur extra operator class

(3) this section does not restrict or prohibit equipping a vehicle with or using a radar detector.

Violations of this law carry a 1 yr jail sentence and a $500.00 fine.

I just bought a vintage Zenith TransOceanic from Steve Houser AC7JQ, who trades on this group. The radio was even better than he described it, he shippped it quickly, and the packing job was the best I've ever seen: double-boxed in a metric ton of packing peanuts, and approximately one-third of the entire North American bubble wrap supply. I'm listening to the BBC as I write this; nothing sounds quite like a TO :-) Thanks Steve; I hope we can deal again. 73...

From: "Phil T. (VA3UX)" <phil@vaxxine.com>
Message-ID: <39E679DA.295506A3@vaxxine.com>
Source record: 60378

My selling price survey of Tek stuff on eBay has been updated. The survey
now includes 1348 different instruments (scopes, probes, plug-ins etc), and
there are over 15,750 prices data entries gathered during the past 14+ months.

HP and Wavetek stuff are now together on a page of their own. General Radio gear is now on its own separate page. The lists were just getting too long.

My site is located at :

http://www.vaxxine.com/phil/

Comments/suggestions on the format greatly appreciated.

Phil Turcotte (VA3UX)

I have a Collins round emblem 75S-3C receiver.
Its in very nice condition, its a 75S-3B S/N 85534 converted to a
75S-3C (Collins Factory Mod) these are the items it has:
1. Weighted Spinner Knob (not plastic)
2. F-455-FA-05 500 HZ CW filter
3. Filter Cover
4. Skytec (Tubesters)
5. Original tubes
6. Spectronics DD-1C Digital Frequency Counter (made for Collins)

7. A BEAUTIFUL receiver addition that includes an extra F-455-FA-21
2.1 filter.
As you already know this radio comes stock with a F-455-FA-21 filter,
it now has TWO. This makes the 75S-3C receiver have more selectivity.
You are unable to see it. Its done in the bottom of the chassis, and
under a metal cover...VERY NICE JOB.
8. I have the manual for the 75S-3C, Tubesters, and Spectronics DD-1C
9. Original Paint, Knobs, and feet, no holes of mod's to the chassis

Price is $2000.00 plus shipping

If you need to se pictures just ask....

Thank You, & 73,

Leo KJ6HI

A vague recollection says this was also sold under the
original Trio name. I can picture it but can't recall
Trio's model number. It looks akin to the TS-511
transceiver. ebay is the best place to scout for photos.

2979. REDUCED: Heath HF station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-13 00:00:00 UTC
From: sabbatai_zvi@NOSPAMhotmail.com
Message-ID: <39e72756.15650202@news-server>
Source record: 60298

Last chance to obtain the complete set and keep these together.
The XYL says they have to go!

Reduced the price to see if someone would like these.
If they do not sell by this next week I will part out the station for
those who
are seeking the individual pieces.

Heath SB-102 HF Transceiver (was $275.00)
Heath HP-23A (Mounted inside SB-600) (was $100.00)
Heath SP-600 Speaker (was $50.00)
Heath SB-620 Monitor scope (was $100.00)
Heath SB-630 Station Monitor, SWR, Timer (was $100)
Interconnecting cables included

Pictures available.

All are in great shape. A few minor paint chips here and there but
otherwise
excellent. Will sell the complete station for $525.00 firm

Also available:

Heath HD-1410 CW keyer with built-in paddles. Like new. Make offer.

B & W Low Pass Filter FL-10/1500 Rated for 1500 Watts, with SO-239
connectors. Looks really sharp, unused and in "as-new" condition.
Picture available. Will sell for $25.00

Shipping additional on all items

* Please emove the 'NOSPAM" to E-mail me.

2980. WTB: BC-1255-A receiver

Newsgroup: rec.radio.amateur.boatanchors

Source record: 60299

Hi,

Thanks for reading this! I'm trying to find a BC-1255-A receiver made by
R.L. Drake Company for the U.S. Army Signal Corps in 1944.
You may see several pictures of it at
http://www.dproducts.be/drake_museum/bc-1255-a.htm

I'm in Norway but I have long experience and a lot of referencies from
U.S.A. and elsewhere. I have a very good friend in USA who you may ship to
if you are in U.S.A. but don't want to export.

I'm a very serious collector of Drake equipment, and I have almost
everything that Drake has made. My collection is according to the people at
the Drake plant the most complete one in the World. It includes several
Drake prototypes as well.

If you have any info of where I may try to find this receiver (in any
condition), please let me know. Thanks in advance for your help to complete
my Drake collection.

Hi Ed -- in the Allied radio catalog of 1967, Hallicrafters had a 2-Meter
Transceiver for $199.95, External VFO was $49.95.
Model SR-42A Transceiver and HA-26 VFO. 10-12 Watts out.

Of course, the SR-42 (and the matching 6-meter rig, the SR-46) were AM,
not FM. I can't think of any FM ham transceivers until the late
sixties/early seventies, after the mode became popular via commercial
surplus.

Gonset made a unit that plugged into the crystal socket of the Communicator,
that allowed one to transmit FM, though who knows how well it sold.

And by the time there were FM transceivers, crystal control was the
standard for 2M use. Anything that had a tuneable receiver (or tuneable
transmitter for that matter) were the exception; there was a Clegg,
one rig that I can't remember the name of, but which offered both AM
and FM. Around that same time, there was a Heathkit solid-state 2M
transceiver (it had a tuneable receiver, crystal controlled transmitter,
though you could use an external VFO) that you could buy an external
adaptor to transmit FM.

SO either memory has warn away, and that Hallicrafters was AM and had
an external VFO, in which case it must have been the SR-42, or it
was some sort of prototype or intended for some other service (didn't
Hallicrafters make some FM transceivers for militatary use in the sixties?
Though, I imagine they would have been crystal controlled). The fact

that it had been bought from a Hallicrafters employee might explain some odd piece of equipment.

Subject: FS: Drake, National, Yaesu, & Hallicrafters + transverters!!
From: <A HREF="mailto:maddrewski@aol.comnukespam ">maddrewski@aol.comnukespam
</A> (MadDrewski)
Date: Wed, Oct 11, 2000 5:34 PM
Message-id: <20001011173457.27047.00003280@ng-cg1.aol.com>

I have decided to part with a few toys and will post them here to let the "newsgroupers" have first shot at them (i.e., XYL started making demands!). All units will be as described, and photos are available on request.

NOTE COMMENTS AT END OF MESSAGE, PLEASE.

Drake 2B w/2Q Multiplier and crystal calibrator. My personal unit, works great, very sensitive! Some of the switches are a bit stiff, but all are operable. Clean and clear audio. Original caps, just well taken care of. Some wear on the edges of the case, a repaint would get it to 100% but not needed for operation. No corrosion or mods. Always in a heated shack. $250

Hallicrafters S-94, 30 to 50 mhz. receiver. Works fairly good, I listen to Highway Patrol on 43 mhz, but haven't taken the time to go thru it. Good paint; spare tubes included. $50

National 6 meter converter. Saw one on eBay the other month, "rare, rare, rare!!" (that's what they all say). However, it is NOT a common piece! This one is one of the later units using the Nuvistor mixer. For the NC-300, I believe. Complete, not missing parts. $70 (committed at present)

Yaesu FTDX 560 500 watt input HF boatanchor, good solid tube rig, works well, extra finals. With matching speaker. Bought it thinking I'd have my General or Extra by now, but those 16 hr work-days get to you. XYL said "use it or lose it." Lots of receive hours on it, but STILL don't have the HF ticket yet (sigh) $350

Yaesu FTV-650B Transverter for the FT101 series. Yup, the "Rare" 6 meter unit. Works like a champ. Just don't have the FT101 anymore and the -B doesn't work with the FTDX series. $325 with cable and book (NOT copy).

Yaesu FTV-250 2 Meter Transverter for the FT101 or the FTDX series. Works like a champ but I have an Icom 2M all-mode now. $275 with cable and book (NOT copy).

All prices are packed, but less freight. I can ship via UPS, FedEx ground and USPS (caveat emptor on USPS and UPS). I recommend insurance on all shipments!!! As I can use our corporate shipping facilities, I can get the discounted UPS rate and will give an exact amount for shipping once I know the total weight/cube. I pack in bubble wrap, then peanuts, and in new boxes. Better to be a bit excessive on packing than risk a damaged unit!

All radios can be seen at the QTH if you're in/near the Greensboro, NC area. I will consider 6 meter all-mode trade offers up/down.

NOTE!! PLEASE email

pamsock<<at>>aol<<dot>>com

for info, esp. over the next week, as I'll be out-of-country for a week (but will check email).

As for payment, I'll be at the Boatanchor Swapfest in Jamestown, NC on the 28th of Oct., for face-to-face transactions, or will do prepay. Sorry, don't do PayPal (yet).

Don't like the prices? Make me an offer I can't refuse.

I really don't like eBay and would like to avoid using an auction service.

Andrew

I think Finkelman was a pussycat compared with Walter Howell.

I was quietly standing and looking out the window after handing Howell my ham license test paper for grading. He growled that if I wanted him to grade it, then I'd better sit down.

When I was 16 I took my test for the 2nd telegraph license. When Finkelman finished checking element 6, he had mercy on this kid, kindly suggesting I reconsider the answers to three of the questions. I did and I passed.

Terrific memories. A shame today's hams won't have similar ones to share.

George, W2KRM

PS: Remember the interoffice signaling method they used?

Cut a piece of wood to fit between the heavy part and the
cabinet etc. The technique seems to be used a lot by the
folks that restore BC radios with large speakers in them.

I suspect that if a small, heavy item like a transformer is secured to a chassis which is secured to a cabinet which is packed in endless foam and beads, a drop will still bend and/or loosen the small heavy item.

Unfortunately I don't know what to suggest, to prevent this, apart from a low-g journey - NOT a journey on any kind of road transport where people might have to brake suddenly! Take it by train/railroad?

Or by ambulance?

3006. Foothill this Saturday?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-13 03:42:52 UTC
From: Hannelore Breuer <hannelore@technoscript.de>
Message-ID: <39E684B9.151E@technoscript.de>
Source record: 60380

Hi,

I am staying in San Francisco for a few days. According to my math there should be a swapmeet at Foothill this Saturday. Is this correct and is it still $2 (in quarters) for parking?

I would hate to get up at 4 AM and drive 50 miles only to find out that there is no swapmeet.

3007. WANTED, Clough-Brengle info and equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-13 04:44:49 UTC
From: Ron in NC <kc4yoy@pop.trellis.net>
Message-ID: <01c034d1$2219cfa0$4b4996d0@ron>
Source record: 60387

I'm looking for ANY information on the Clough-Brengle Co.
They manufactured primarily test equipment in the 1930's.
I also know of two different transmitters that were also built
by them.

I am interested in buying pieces of Clough-Brengle equipment,
Catalogs, Manuals, etc.

I would also like to find someone with first hand knowledge
of the company.

As far as I've been able to determine there is no
historical information on this company.

Is there anyone in the Chicago area that would be willing to
assist me by seeing what might be in the library or newspapers?

I would also like to have photos of any Clough-Brengle equipment
that you may own.

I hope to turn this research in to a historical article for publication.

Thanks in advance for your help.

73,

Ron

I am looking for a manual, or manuals for a TRC-77 HF manpack. This is not
the same as a PRC-77 VHF tactical fm radio. I'm happy to pay postage and

copying, plus something for a doughnut run to cover the inconvenience. I can
also do the copying and return the original, if that works. Please let me
know if you have a manual. Also, if you have a spare battery case, I'm
interested. Thanks. Jim W7LS

Hi Phil. It sounds like you have the R-390A. The non A model does not have mechanical filters. The R-390A model has an "Ant. Trim" control right in the center, at the top of the panel. In a non A model that area is blank.

The Collins manufactured R-390A radios had a rather long I.D. tag. For All other companies the horizontal spacin between the mounting holes for the I.D. Tag is about 2.3". The spacing for the Collins tag mounting holes is at a good deal further apart.

You might try looking at the I.D. marking, behind the front panel, on the mechanical frequency display. That is usualy the one item thats not replaced during overhaul/repair operations.

Regards, Rudolf Salomon

Source record: 60326

FS : Pair of Plug in rectifiers for 872'A tubes. Made by Wilkinson Electronics. No modification needed for your equipment, just plug them in, install plate cap and fire them up. These were pulled from an old RCA transmitter that was working when pulled out of service in 1990. They have 18 rectifiers on them with the balancing resistors, caps, and neon lamps for each rectifier. I have no way to test them but I did check for shorts across each diode with a Simpson 260 VOM and none are shorted or open. $49 shipped to your door. I also have a set for 866's. They have 10 diodes each and are $30 shipped. Same deal as for checking them out.
Thanks,
Jim

The main difference is the RF Gain Control. If the unit has an RF Gain
control, lower right side, above the antenna terminals, it is an R model
. If not, it's a Q.

I owned one of the SR-42s transceivers in the 1960s and would routinely work the rock-bound guys who were using Motorola surplus FM gear. The SR-42, even though it was an AM rig did a fine job of allowing you to slope detect an FM signal. Back then, with the mix of AM rigs working the surplus FM rigs there was a lot of this working AM and FM with the same rig. It was actually tougher for the guys using the FM rigs as a little trial-and-error tuning was always necessary when contacting an AM station to get him to swing his VFO back and forth to find the best quieting of his AM signal. What a high-spirited bunch of troopers we were back then.
Perhaps that is where you got the "FM" from when referring to the Hallicrafters SR-42?

OK "homebrewers" - here is an opportunity!

For sale:

Electrolytic capacitors. Radial (Vertical mount)

ELNA Brand:

100 uF at 500 V DC QTY 2 at $5.00 each

47uF + 47uF + 47uF + 47uF at 350V DC QTY 2 at $4.00 each

3 Mounting brackets for the above at $1.00 each

AEROVOX Brand:
125 uF at 450V DC QTY 1 - will sell for $5.00
(includes mounting bracket)

All are used, but look to be of recent manufacture.
Tested and working OK.

Preference given to selling all the above together.

Please remove the NOSPAM to e-mail me.

Source record: 60336

Vern, Mike & Rod:

Thanks for giving my odd question a little bit of thought. I had noticed the SR-42/42A at the Hallicrafters site, but the external VFO is a problem. I'm certain that I wasn't using crystals, but I'm also almost certain that I didn't have an external VFO box. The SR-42A looks like a close match; just imagine an internal VFO slaved to the receiver dial. <grin>

Re the FM mode; maybe I did slip up here. I do recall using "slope" detection for SSB stations (I had an S-40B general coverage receiver at the same time), and I may have been using AM on the Hallicrafters 2M rig. (I had an odd station balance; a 10 watt rig with a 40' mast topped with the fanciest Cush Craft beam.)

One thing that's interesting was that the SR-42A is shown as being in production in 1964 & 1965. I've thought things out a bit more, and I now believe that I bought my rig circa March of 1966. I got it without a box or any manual or warranty card, but it was in spotless, new condition. Maybe somebody at Hallicrafters had a little customization business going in his garage! So maybe I blew my chance to have a real collector's item; I traded the rig for a TV camera at the 1968 Hamfesters Picnic in the old Santa Fe Park.

Thanks for your help!

Source record: 60337

henry 2k-4 amp, 10 through 80 mtrs, full out-put [1400watts], this amp uses #2...3-500z eimac tubes. the amp is in very nice condition and has a slave relay installed so all newer solid-state trancievers can key it. on a one to ten scale this piece is at least a 9+ the amp is a pedestal design, floor standing unit...power supply on the bottom with rf deck on top. i have had this unit for about 10 years and it has never given me a problem.....realy not much use over these years!
i am asking $825.00 but open to offers or trades. might be interested in an .....
....ICOM 706mk2 for my mobile. let me know what you have, we can talk!
this amp is big and heavy so it will be a pick-up item or a meet half way. i am located in Waukesha Wis. which is about 20 miles west of Milwaukee. i will drive up to 100 miles or so to meet for sale or swap.
thanks & 73.....george

MRB-5 Receiver complete looks ok $40.00

MRB-5 Receiver s-meter scale faded almost completely wrong knobs $25.00

MB-560A transmitter no dial glass $25.00

MB-560 transmitter complete looks ok $40.00

plus shipping from 61559

They all have scratched cases and extra holes drilled. Not beat to heck just
used.
I have not tried any of these so I don't know their electrical condition.
They are complete
except as noted.

Thanks Larry

Alan - I agree completely. Wish there was a lot more discussion on this group. I've even tried "flame baiting" in an attempt to drum up some discussion, but all the impotent hams on this NG are more interested in eBay, I guess.

I finished up my SX-88 today - what a pain replacing the caps in the RF section. Sure sounds nice with the P-P 6V6s though.

From: kevin schuchmann <kschuchm@pacbell.net>
Message-ID: <39E93C41.AE5D5052@pacbell.net>
Source record: 60343

Hi Hal,
the sb-604 is just the speaker, but you can put a hp-1144A power supply inside it.
You are correct that the heatsink should match the others, sounds like yours it bent... unplug everthing and then loosen the 2 screws on the left and the right of the speaker and the top case will come off then you can remove the 4 screws on the bottom for the power supply, an it will come out, then you can survey what you want to do to straighten the heatsink.
BTW while your peaking inside the power supply make sure you see a SCR marked Q4 on the pc board in there,its in the middle of the board , the original hp-1144 power supplies had a nasty habit of loosing one of the output transistors on the heatsink and thus sending 22 volts to the sb-104 which got really ticked... poof!.
So heathkit came out with an upgrade which was a to add a couple resistors a zener and an scr on the pc board in the bottom of the supply so if the voltage gets to high the scr crowbars and shorts out the supply thus blowing the fuse rather than blowing the sb-104a, if your power supply is a hp-1144A then you should have it, the hp-1144 did not... and you would want to add that protection...

Kevin

For Sale Henry 3000D commercial 13 Mhz Linear.

Complete cabinet enclosure and components. Includes blower, 5KW Bird Bi-Directional watt meter coupler with slugs. Fillament transformer, HV rectifier blocks; Complete Meter panel; Mainetnance/Operating manual and rebuild 3CX3000A7 Tube.

Please serious buyers only, this is for the Ham who knows how to modify for single or multi band operation and is familiar with high power commercial amplifiers of this category.

Due to the size and weight I would prefer to ship in Western US only but shipping costs could be negotiated if necessary.

If your serious and would like to discuss this in further detail contact me vai e-mail at
dsrcom2000@aol.com

Regards,
Don W6PJJ

I was at a fixed station in 1958 and we got in new R390A to replace the Collins R390.

Found out that an old sick Collins R390 was better than the new R390A made by Motorola. The Motorola R390A passed the spec test but the Collins were much better than spec. We kept the Collins R390 and sent the Motorola R390A back to the states for field use. We had to have the best. Collins do put their name on the power transformer, they did not make power transformers. You may find a collins part number on it.

3039. FS:GPS antennas,High Quality,$55.00, Free USA shipping!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-14 01:41:45 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39E7B965.90B56AE@home.com>
Source record: 60315

I have for sale some real neat GPS antennas. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or
other GPS unit that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. BNC to BNC jumpers up to 10 feet are also available for a
small additional charge. Will ship internationally, buyer pays full AIR
mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas
orders. USA orders can pay with US postal money orders-Western Union
money orders and will ship in a few days, personal checks when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

Model G-209R F/S Covers old (pre-WARC) ham bands. 13 Tubes. Has MA-Cw-SSB modes, NL, dual conversion and one of the (if not THE) best/smoothest tuning I've run across...think the SP-600 is smooth? Wait till you try this. In original case with very classy removable partial top, or can be rack mounted. Built in 1960 this rare Italian receiver is designated "very scarce" by Fred Osterman. $375 + shipping & insurance. If not sold by Oct 17, will place on EBay with $400 reserve price. Works, but I always recommend tune-up. Set for 110 VAC power.
Shown on page 137 of Fred Osterman's book.

3046. need source for Viking Valiant pi-net output caps

For trade, I have an HQ-170C in very nice looking and operating condition. I also have a nice HQ-170AC which also looks nice and works well. The case (only) was dropped on the front right corner and is a bit deformed, although you have to look a bit closely to see it. Both were recently re-tubed, for good measure (no pun intended). I'm looking for a similar HQ-160 receiver and the 2 tuning knobs for an HQ-150-series receiver (other models, too.. the bigger ones with the fluted perimeter). I have reprint docs for both of the above receivers. Let me know if you have any interest. These receivers are not for sale, however. Modifying the herd, not culling it. Thanks.

Source record: 60264

Hello all... I'm recapping a Globe Scout 680-A and need to replace the two large paper caps rated 12mfd @ 700 wvdc I looked through Allied, Newark and Mouser catalogs and find no direct replacement of course. RF parts didn't seem to have anything either. AES had some "tubular electrolytics" rated 16 mfd @ 800 volts can/should I use these? Is there some other source I'm missing? What series or parallel combination of lesser rated caps can I use if any? I know you guys are recapping old gear all the time, so I thought you could help, and being somewhat new at this I humbly request and value your opinions. I hope my problem is not so mundane as to bore anyone and if there is a FAQ list somewhere please point me in the right direction. Help me get this old toaster back on the air fellas and I'll be most appreciative! Thank you for taking the time to read this.

Best regards

John

From: Roger Leone <arleone@inreach.com>
Message-ID: <CJmG5.680$6q1.24120@news.inreach.com>
Source record: 60267

John:

The 16mfd/800v caps seem almost ideal. If they are reasonably priced, I would go for them. You could go with series combinations of lower voltage caps (i.e. two 32mfd/400v caps in series), or parallel combinations of smaller caps (i.e. two 8mfd/800v caps in parallel), to give the same result. These options should be considered if the price or availability of the others becomes an issue.

Remember to use equalizing resistors with series connected caps. These resistors can also serve as bleeders. The value of these resistors should be similar to the original bleeder, but divided in half and placed across each of the series connected caps. For example, if the original bleeder was 100k ohms, use two 50k resistors for the bleeder/equalizers.

Increasing the voltage rating is a good safety measure, and the increased capacitance will improve filtering (lower ripple voltage) and voltage regulation. Higher capacitance also increases inrush current when powering on, so don't push this too far. This is usually not a big problem with older gear using vacuum tube rectifiers, since they warm up slowly enough to prevent big surge currents. Solid state rectifiers have large inrush currents since they are on instantly when power is applied, and discharged capacitors look like a dead short when power is first applied. This inrush tapers off asl they become charged.

Source record: 60276

I have aligned the entire rx per manual and all is fine, except the notch. I can not find any combination of adjustments that seem to work. Strangely, it seems to notch the 'audio' from the speaker, but the S-meter does not dip. Makes me suspect BFO feedthru into the IF amp.

Anyone ever have a problem with one of these 50khz T notch circuits. Should be similar to SX115, SX101 I think. I am beginning to suspect that the T notch Caps are bad. BTW this is a new restoration, the notch never worked while in my possession.

After this it's mate, the HT44 will move to the bench.

Tnx

One more consideration when using parallel, series, or single-unit replacements: current handling ability! Sometimes those "modern" caps with the same specs aren't intended to handle the demands of tube equipment.

A week or so ago I posted a "how do I..?" on this subject, and received several helpful replies. I tried one of the suggestions, and want to report on the dramatic results I achieved. I used BRASSO metal polish, labeled for chrome, stainless, but not aluminum. It worked miracles. The rig I was working on was an HW-16, a kit that had been assembled years ago, but did not work. It had been put in storage for nearly 30 yrs, and looked bad! With no real effort, and only enjoyable time, I had a chassis that actually has a mirror-like finish. The markings on the back apron were not removed by the cleaning, either.

Because Brasso is a polish, it dries to a powery haze that needs to be buffed off. Because of this, I would not recommend it as suitable on grained aluminum chassis, such as the HT-32: I don't think you could get the residue out of the grain satisfatorily.

Hey well at least we got some interesting ideas moving. There ARE still some people loving old receiver and putting them to rights again. My faith is restored. In a way I wouldn't mind one messages saying Valve RXs on Ebay in the subject
But when the same person puts ten messages which just contain the Ebay URL for the item (if thats what it is!) I do start to begrudge even the time it takes to get the headers down and delete them.

Go to it fellas and lets hear how the old kit works when you've revamped it. I admit I have had some valuable help in the past from the group, and would be loathe to loose it by feeling that I wanted to unsub.

My own hang-up is older test gear, mainly Marconi, GR, and HP. all bits now working well.
Cheers de Alan G3NYK

Gary,

I put my NTX-30 (http://www.io.com/~nielw/nat_list/ntx30.htm and http://www.io.com/~nielw/shack4.htm) on the air quite a lot. The NTX-30 has parallel 6L6 RF output stage rather than the speech amp in a NTE.

Here's a few shots of a National 600 transmitter driven by a NTE RF exciter/speech amp: http://www.io.com/~nielw/nat50/nat50_06.htm

Source record: 60247

I have a Collins round emblem
75S-3C receiver.
Its in very nice condition, its a
75S-3B S/N 85534 converted
to a 75S-3C (THIS IS A
COLLINS UPGRADE) .
These are the items it has:
1. Weighted Spinner Knob (not
plastic)
2. Collins F-455-FA-05 500
HZ CW filter
3. Filter Cover
4. Skytec (Tubesters)
5. Original tubes
6. Spectronics DD-1C Digital
Frequency Counter (made for
Collins)

7. There is a BEAUTIFUL
receiver addition that includes an
extra Collins F-455-FA-21 2.1
filter.
As you already know this radio
comes stock with a
F-455-FA-21 filter, it now has
TWO. This makes the 75S-3C
receiver have more selectivity.
You are unable to see it. It has
been located in the bottom of the
chassis, under a metal
cover...VERY NICE JOB.
8. I have the manual for the
75S-3C, Tubesters, and
Spectronics DD-1C
9. Original Paint, Knobs, and
feet, no holes or mod's to the
chassis

Price is $1799.00 plus shipping

" TUBES RULE "

Radio Amateur Callbook Winter 1962-63

Classic FLYING HORSE cover. 568 pages in good condition.
All K & W calls. On the rear cover is an RCA ad for
"Beam Power" Tubes. Vintage ads in the 32 page glossy paper
front section include Collins, Allied Radio, Mosley, Henry
Radio, Hallicrafters, etc. ARRL countries list, Intl. radio
amateur prefixes, Intl. "Q" signals, great circle bearings,
time charts, etc. A little edge wear but overall real nice
clean condition.

3082. Heathkit SB 604 Questions?

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <7caG5.21681$h%1.112457@typhoon.jacksonville.mediaone.net>
Source record: 60254

Good Evening:
I have a SB 604 (an the SB 104A). I have got to order manuals for both, but it appears that the SB 604 is both a speaker and power supply ,an that was the information I was given at the time of purchase. I went up on the Heathkit site and the SB 604 is listed as a speaker. My assumption is that it is both a speaker and power supply?

The heat sinks on the back of the SB 604 are bent forward about 15 or 20 degrees toward the inside back of the cabinet. Is this normal? I don't think it is, because the heat sinks on the SB 104A, and the SB 230 are square to the back of the cabinets.

Researching QTH archives it looks like, don't use 409,green cleaner etc. And automotive wax for finishing and protecting the exterior. Any suggestions for cleaning and protecting the exterior/interior. Cabinets are quite clean, but the units have been up in storage for a while.

Neither of these units is supposed to be working, so until I get manuals will have delay that part of the project.

Thanks for any help or suggestions.

Source record: 60255

The quality of discussion in this newsgroup certainly has taken a sharp nosedive during the last couple of years. It used to be a great forum for exchanging tips and advice about collecting and restoring boatanchors. Recently, it has become flooded with FA and FS ads to the point where most serious discussion is lost in the shuffle.

If you happen to read the rec.antiques.radio+phono newsgroup, you might have noticed a similar phenomenon, which was followed by a vigilant effort of newsgroup regulars to discourage "content-free" ads. That effort was largely successful, and r.a.r+p has now become much more interesting and substantial to read.

This forum has degenerated so far that I don't know whether it's possible to save it. I would certainly welcome such a return to its roots. As I mentioned countless times during the r.a.r+p squabbles, if you want to sell something on Ebay, simply list your auction there and be done with it. Polluting newsgroups with your redundant ads wastes everyone's time, and insults the intelligence of everyone with half a brain. Think about it -- EVERYBODY looking for boatanchors on the Internet already knows that there are online auctions and already knows how to search them. Posting FA notices in this or any other USENET group only wastes bandwidth and pisses off the people most likely to be interested in buying your stuff. Duh.

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges.

Power Transformers (all have 117 V 50-60 Hz primary)

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and paint is a bit scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Merit P-1351 power transformer. Horizontal, "hole in the chassis" style with leads. Secondaries: ~700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 2 A rectifier filament, 6.3 V @ ? A heaters.. Used, fair-to-good condition. Tested, works. Price $2 (5 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale or knob provided. Can be connected for CW or CCW rotation, connection instructions on terminal board cover. Used, tested, works, good condition. Price $20 (10 lbs.)

Tubes

Receiving tubes - NOS ones are in original boxes. All used receiving tubes tested and good on Hickok 6000A tester unless otherwise noted. NOS tested at your request. Listed by type, condition, quantity, price each, special notes.

0Z4, used, 4, $0.40
2X2/879, used, 1, $1
6AB7, used, 1, $1
6AC7, used, 7, $1

12D4, used, 1, $0.10
12EC8, used, 1, $0.40
13V10, used, 1, $0.25 (filament OK)
14F8, used, 1, $0.40
14H7, used, 1, $0.40
14X7, used, 1, $0.40
25B8GT, used, 1, $0.40
25EH5, used, 1, $0.25
35EH5, used, 1, $0.25
35Z5GT, used, 1, $1
36AM3, used, 1, $0.25
50A5, used, 1, $0.40
50EH5, used, 1, $0.25
50L6GT, used, 1, $1
403A, used, 4, $2.00 (WE)
5557, used, 1, $0.10 (filament OK)
5651, used, 10, $0.05 (untested)
6080, used, 1, $1 (RCA - in RCA box)

6080, used, 1, $1 (GE)

Transmitting tubes • NOS are in original boxes. All used tubes tested and good as indicated. Listed by type, condition, quantity, brand, price each, special notes.

4B32, used, 1, $0.10, JAN, filament tests OK
837, used, 1, $3, JAN, tests good on I-177
1619, used, 1, $0.40, tests good on I-177

Ballast tubes - by Amperite

3V4, used, 1, $0.25 (don't confuse with tube of same number)
6-4, used, 1, $0.25

Note: The above is just a small sample of the tubes available. Please email your needs - I may have what you need.

Tube Sockets and Connectors

Special 9 Pin "octal" Plugs • These look like octal, but have 9 pins. Used on some E.F. Johnson and other BA gear. They're the type that mount with a snap ring, or on the end of a cable with a matching snap-on metal shell. Have 2 plugs (no sockets), used, good condition. $3 each, or both for $5.

Ceramic Octal Sockets • White ceramic, various manufacturers. These are the type that mount in a keyed hole with a snap ring, or to a mounting plate that is mounted with screws. They are used and somewhat dusty/dirty but will clean up. With snap ring only. Have 33 of these sockets. "As-Is" (not cleaned up) 25 cents each, ten or more 20 cents each.

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

7 pin Septar socket for 826, 829, 832, 3E29, 7094, etc. • NOS E.F.Johnson 122-240 socket, complete in original box. Really nice $5

12 pin sockets • These are MIP-style sockets with the center key, like the octal and 11 pin types - but they're 12 pin! Yellow mica filled bakelite. Slightly used - one or two pins have had wires soldered to them, otherwise they're practically new. I don't have any matching plugs! Have 9 of these - price 25 cents each.

Publications

QST for May, 1995 • excellent, $1
QST for June, 1994 • mint, still in plastic shipping bag $1

AES (Amateur Electronic Supply) catalogs for 1978 & 1979 • VGC $1 each or both for $1.50

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor mounted on a mica compression trimmer. Used in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

R.F. Choke Coil - Made by General Radio Co., Type 119. This totally encapsulated coil/choke is marked "250 MH" and has screw terminals. Looks like it's pre-WW2 vintage. $1 (1 lb.)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Free for the postage. (2 lbs)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

FS..Johnson VIKING VALIANT ll....This is a great working unit,
in nice shape...it does show some wear around the drive, meter, and
oscillator dials, but overall the unit is in good condition, and
appears very original...It puts out over 200 watts on my Water's
wattmeter, and the pattern looks great on mjy Heath Monitor
Scope...This is a pick-up only on eastern Long Island, as I can not,
and will not ship it...jpg-s to interested buyers...$400.00

Source record: 60200

Anybody know the size of the 9 screws that are used to mount the dial face panel to the chassis? I had to remove them as part of a restoration (dial glass cleaning)and one of them broke. Also the receiver mounts in the case with 8 rack mount screws. Those screws use special rack mount trim washers and one is missing on this radio. What are they called and where can I get them. I am new to this. Thanks for any help.
Brian Denley

Looking for information on this 4 tube, transformer powered receiver. Picked it up at Foothills this weekend and it is playing happily away on my bookshelf right now. It needs only cleaning up a little, mainly dust, realignment (seems to have been aligned with bandspread set at maximum), and a new back cover. A Web search showed only one other instance of this type, one being sold at a BA auction. Anyone know of another one of these around for parts? Manual?

Cortland

Oddly, the only boatanchors I do have is test equipment. I'm certainly not collecting it, just taking it when offered because I want the function. My Tektronix 545 definitely counts as a boatanchor, not only in terms of age (it's as old as I am) but in terms of size and weight. A friend of a friend found it in the garbage a few years back (complete with a number of plug-ins, and a manual), and I ended up with it shortly afterwards. Since then, I've seen similar vintage scopes in the garbage a couple of times, but haven't felt like dragging them home, since I was on foot.

The Hewlett Packard 410B still has it's uses, as does that old RCA signal generator. I wish I had a Millen GDO, but for it's function, not to boast.

I'm still quite pleased with that Radiotron Designer's Handbook I found at a used book sale a few years ago, for $3. When I was a kid, and new to ham radio, it was always talked about in reverent tones, but I don't recall seeing any at the hamfests. That may be more a collector's item, but I do find myself checking it regularly when I want to know something.

Actually, I have a fair size collection of electronic and radio books old enough to be considered "boatanchors", but then, I actually read them.

The TS-830S doesn't count, though people try to sell them here, since it's too young and too small to be considered a boatanchor.

I had more "boatanchors" back when I entered the hobby in 1972, but they were just cheap and available pieces of equipment back then, and I didn't keep it. There are things I would like to have now, but I certainly am not interested in the collector game, and the wheeling and dealing we see in this newsgroup doesn't attract my attention.

Yet, I am quite interested in the old equipment as pieces of equipment. When I first got into the hobby, I was lucky to be able to amass a good collection of back issues of the ham magazines, and I spent a lot of time reading and re-reading them. The old rigs seemed old then, though at forty I now realize that ten years in the past isn't really very long, and there were plenty I wished for then.

So yes, the ads (and I don't make a big distinction between the auction ads and the regular forsale ads) put too much value on the rigs as a commodity, and not enough on their historical value or even value to the individual.

Michael VE2BVW

And just how does EVERYBODY already know this? I suppose that you were an instant expert from the moment you plugged in your computer, but most everyone else is still distributed along the learning curve.

I welcome FS/FA notices in the group! Why?

1. I don't live on eBay. I go there when I have something to sell or I'm looking to buy. Otherwise, I don't do daily searches.
2. As long as a notice is short, has a proper FA/FS header, and is on-topic, I'd like to see it.
3. I DON'T want to see it multiple times, day-in & day-out. True, that's obnoxious and counter-productive.
4. Of course, I don't want banners, graphics or music. Just the quick facts and link to use.
5. If you don't want to see FS/FA, then put a rule on your reader.
6. Personally, I monitor some groups with 100+ posts per day. Much more BW is wasted on MLM, re-finance, get rich quick and porn.

Regards,

Ed

3131. Info needed on the Gates BC1-T

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-17 00:00:00 UTC
From: Bob Maser <w6tr@mindspring.com>
Message-ID: <8sgtgjjbi1@nntp9.atl.mindspring.net>
Source record: 60144

I have just put a Gates BC1-T AM transmitter on 75m and need some guidance on how to connect the secondary winding of the modulation transformer. I am referring to the winding that connected between the low voltage power supply and the grid of the driver driver stage, not the main secondary winding. This "mini winding" has a terminal with 4 screw connections on it. I currently have it connected between 2 and 3, with the red wire on #2 and the brown wire on #3. #1 is closest to the center of the TX and #4 is the one closest to the right side of the transmitter wall. When I modulate the rig anything producing more than 175-200ma will cause a rattling noise, which I believe is coming from the transformer. It sounds like winding talkback. I get reports that say that my modulation is less than 100%, like 50-60%. I have all kinds of stuff in the audio chain, ie: mike, preamp, CBS Audimax, CRL Peak Limiter.

If anyone out there is running one of the beasts or knows about them, I sure would like to get you on the phone and discuss.

Email Address Is Below !

Brand New ASTEC:
VS3-K0-K2-K3-00
Single Phase 85 - 264 VAC /// 47- 440Hz Input
Three terminals for output:
one 2v @ 150amps
two 5v @ 150amps
three 12v @ 62.5 amps - For Ham & CB Gear

Detailed Specifications On Power Supply:
http://www.astec.com/products/1150.astec.pdf
(Must have Adobe Acrobat installed to view)

This page show a different model for sale:
http://www.newark.com/
Search for "manufacturer" part number and enter "VS3"
for other models then use the PDF (Adobe) specification
chart to compare output watts / amps.

One example is a VS3-C6-C6-20
which is VS3 or 5x8x11 case
Terminal one is "C6" which is 28v @ 32.1amps
Terminal two is "C6" which is 28v @ 32.1amps
The unit on that page is about $2,000

I'm selling this for $120 UPS Shipped

Wait until you see this Powerful SB-220 2KW Linear. There is not a mark

on it. Looks like it was just built. If you want to get the output of
a $2000 2 KW amp, at a 600 watt amp price come take a look.

3157. WTD: Worn-Out Nixie Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-17 04:09:22 UTC
From: afranzman@aol.compute.com
Message-ID: <20001017000922.05079.00002315@ng-fy1.aol.com>
Source record: 60240

You may have seen my earlier posts on buying/trading Nixie display tubes with digits over 1 inch (25mm) tall, or my other posts regarding the possibility to restore such tubes that have been blackened by long use or excessive current.

Though I am still seeking more of the large size Nixies, I now have sufficient information to begin experiments into the possibility of Nixie tube restoration.

For my experiments I need Nixie tubes that are no longer useful due to darkening of the glass, and/or failure to fully and reliably light one or more digits (up to and including complete failure to light at all.) I can't use tubes having physical damage such as cracked or broken glass, or pins broken off.

Due to the nature of the work necessary, I can only use tubes with digits 5/8 inch (15mm) tall or larger.

Anyone having such tubes is requested to contact me regarding donating or selling your Nixies to me.

If desired, I will pay reasonable shipping costs and a nominal price per tube depending on what you have to offer.

Please contact me by email. See below for a hint to get past my spam block.

On my SX-28 cabinets, the rail that the screws thread into is very thin- way
too thin
for the weight of the chassis, which means if the chassis shifts, the screws
pull out.
I took a couple pieces of 10-32 threaded rack rail and tacked them behind
the
existing cabinet rails, then used regular rack screws to fasten the front
panel
to the new rail. Seems to work for me.

Message-ID: <39EE05D3.816B0CA2@home.com>
Source record: 60182

I have for sale some real neat GPS antennas. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or
other GPS unit that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. BNC to BNC jumpers up to 10 feet are also available for a
small additional charge. Will ship internationally, buyer pays full AIR
mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas
orders. USA orders can pay with US postal money orders-Western Union
money orders and will ship in a few days, personal checks when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

If you're referring to the ones that attach the front panel to the cabinet, on my SX-28, they are 10-32. I don't see any screws that attach the front panel to the "chassis", per se. My front panel is held to the chassis, itself, via all the control nuts, etc. Am I not looking in all the right places?

Phil Nelson wrote:

Message-ID: <suse3a5vat809e@corp.supernews.com>
Source record: 60191

Hi,
I have a B&W 5100B. I need information regarding the AC Line Voltage Feedthrough capacitors. Does anyone know of the values of these two parts? The B&W manual doesn't include this information. It only list the B&W part number and that they are Line voltage filters. I need to find out their capacitance value and current rating as I'd like to replace them. Also, does anyone know if I could simply replace them with disc caps under the chassis?

Thanks in advance,
Steve K2FW

3193. correct screws to secure SX-28 front panel?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-18 05:02:31 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <H9aH5.1502$Ok4.70209@sea-read.news.verio.net>
Source record: 60172

Can anyone tell me what size screws to use to secure the front panel of a Hallicrafters SX-28 to the chassis? The previous owner had used sheet metal screws there (grr) and cross-threaded at least some of the holes. I guessed that the screws might be the same size as on my SX-42, but those seemed to go in awful hard, so I stopped trying to force them before I made things worse. If I have to re-tap the holes, I might as well start with the right size. Or, if I'm lucky, maybe I can run the screws through from behind and straighten things out well enough for government service.

Cheers.

Phil

The values are 0.1 uF, 20A, 600VDC (which I read off the caps in my
unit....)

> Also,
>does anyone know if I could simply replace them with disc caps under the
>chassis?

I've wondered about this too. I haven't got to the point in my restoration
where I need
to worry about it though. However, I suspect you'd shunt the disc caps
directly to ground.
If someone gives you a more definitive answer, let me know.

Hi Joe,

It sounds like you are switching the plate voltage.

I may have missed something, but unless you are worried about heat from the tubes on standby, wouldn't it be easier to ground the grid input by way of a cap to keep the amp from outputting anything?

For an interesting choice of unusual,good quality tube equipment by pre-eminent UK and European set makers such Racal,Eddystone,Marconi,Siemens etc.,all with US Dollar prices ,which include the cost of air freight to the USA,please take a look at our site. http://www.radio-exports.com
Any feedback much appreciated,and thanks for your interest.

Sent via Deja.com http://www.deja.com/
Before you buy.

3213. Hallicrafters HA-6 6 meter transverter

Tel: 202-501-5350
Fax: 202-219-2176
Email: inwuire@arch2.nara.gov
Products and Services: PUBLICATION>EQUIPMENT MANUAL OR SCHEMATIC;
Notes: Record group 287-US Army Technical Manuals for radio equipment manufactured from 1940 to 1979. Photocopies can be obtained at a cost of 25 cents per page and a $6 minimum mail order fee. A 'Reproduction Service Order' must first be completed by the National Archives to determine the cost of the specific manual you desire. The manual on this form must be identified by its proper Army Technical Manual number. If this number is not known, contact your nearest US Government Depository Library for assistance. These are usually the main public libraries in large and medium sized cities. The National Archives Microfilm Publications Pamphlet describing M1641, also available from the Archives, describes this procedure.

PUBLICATION>EQUIPMENT MANUAL OR SCHEMATIC;
Notes
Technical manuals for military radio equipment. If possible, include the manual number with your request. If this is unknown, include a complete description of the equipment including the model name, model numbers and the time period in which the equipment was in use, if known. Once a specific manual is identified, it may be obtained in one of two ways. If the institute possess three or more copies, one may be borrowed through interlibrary loan procedures. This process must be initiated at the your local library. Up to six items at a time may be borrowed for 60 days. (Noncirculating materials include periodicals, manuscripts, books published before 1940, many unit histories and rare and hard-to-replace books). Please note we are a lender of last resort, which means we do not loan materials that are readily available elsewhere. Alternatively, photocopies can be purchased. Our photocopying charges are $10.00 for the first ten pages of copying and $.25 for each additional page up to 300 pages per patron per calendar year. Checks or money orders should be made payable to the Defense Accounting Officer, but mailed directly to the undersigned. Residents of other nations should pay in U.S. currency with an international money order or a check that will clear through U.S. banks. Selected bibliographies of Institute holdings are available through interlibrary loan.

Source record: 60110

Homebrew HF amplifier using a pair of 6146 tubes. The design is similar to the Heathkit DX-100 final circuitry. The components are "heavy duty". The tubes, transformer, choke, etc. test good. It weighs about 50 pounds. An excellent source of parts for AM'ers and homebrew enthusiasts. $95 plus s & h from Schenectady, New York.

The Radio Central hamfest is at Polytechnic University gymnasium on Sunday. Doors open at 9AM. Inddors and outdoors.

On Rte 110, about 3 miles south of L.I.E. (Long Isld Expressway.. Rte 495)(Exit 49).

As I understand it it is just NORTH of the Rte 110/Rte 109 intersection on the EAST side of Rte 110.

I've not been there before but will bring R-390/URR, HQ180 and other tube receivers.

Gentlemen,
My HP 608F VHF signal generator after sitting for about a year has developed pretty severe drift at the top end of it's range. I use it for maintaining my UHF repeater but it drifts off freq so fast it has become a PITA (Pain in the ..)

Anyone have any idea what may be going on here. My only tube experience is with Amplifiers. Every oscillator I ever built was Xtal ref PLL.

I have posted a new web article about my restoration of a Hallicrafters SX-28 communications receiver.

http://antiqueradio.org/halli12.htm

Special thanks to A.B. Bonds for his original description of how to replace capacitors inside the pesky RF box.

I'll add another photo or two after I finish repainting the front panel.

Cheers.

Hello all, I've just recently picked up a FT-101EX and it may
need a new set of finals. I have read elsewhere that the it may be
possible to use 6KD6's instead of the stock 6JS6C tubes.

Can anyone offer some information on this or possibly point me
to a web site that has info? Looking for the best possible price
to finish up fixing this rig of course, and I really don't
want to buy NOS at $40 a pop ;)

It's time for the best auction West of 495! Mark you calendars now for the HCRA annual auction. We've had over 100 sellers/buyers the last few years and this year should be even better. New stuff, boatanchors, what have you, you'll probably find it here. Here's the details:

HCRA Annual Auction
November 3rd, 2000
Feeding Hills Congregational Church
Rt. 187 (right behind Dunkin' Donuts)
Feeding Hills, MA 01030

Great Raffle Prize - Icom IC207R, dual band mobile!

Amateur and computer equipment only.
Mark all items with name, call and minimum bid.
10% (up to $100 selling price) goes to HCRA
If it doesn't sell - you take it home!

Auction set-up at 6:30 PM, auction starts promptly at 7:30 PM.

Look for more information on our web site: http://www.hcra.org

Thanks and hope to see you there.

Sunair GSL-1900A 1KW PEP or Average power RF Amplifiers covers 1.6 to 30MHz. Uses a single 4CX1500B and require a nominal 40 watts of drive. Automatically tuned in a few seconds.

The power supply uses 115/230V/1PH/60Hz

. The GSL-1900A consist of LPA1900A RF Amplifier and PS-1900A Power supply.

As removed from military service in good condition with a set of plugs and a copy of the manual at $1,500.

I can also supply the GSE-924 Exciter 100W with for use with the above at $1,000 in good condition with manual and plugs.

The GSL-1900A with GSE-924 as a set for $2,250 for the pair.

This is commercial/military quality gear for those that like to tinker with military equipment.

Prices are FOB Somis, CA

There is a photo and complete specifications of this on our web site in the HF section

3288. Re: LONG ISLAND HAMFEST SUNDAY/HQ180/R390

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-22 00:00:00 UTC
From: Joe <joeamp@mindspring.com>
Message-ID: <8svfgs$in9$1@slb7.atl.mindspring.net>
Source record: 60003

What a miserable place to find and I live on Long Island, I set my alarm for 10AM and finally get
there 12:30 PM
3 people selling in the parking lot, one guy with smoke stained 386/486 computers parts a top a beat up 77 Caddy
3 inside, one selling gray Chinese tools at retail
One wheeling out a Teck scope
.....everyone gone, what was this a breakfast swap ?
"I work late on Saturdays and do not get to sleep till 5 AM"

Collins 208U-3 2-30 Mhz RF Amplifier 3 KW in
good condition as removed fromU.S.A.F. service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce 3 KW PEP or average power with only
0.2 watts of input drive.

These are automatically tuned with a servo system that takes about 10
seconds to tune-up.

Primary power input is 200-250VAC, 3Ph, 47-60Hz.

Net weight is 975 Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering this unit FOB Somis, CA) two ways as follows:

Good , complete untested except less the 4CX3000A Final tube at
$2,500.00. or
with a tested and guaranteed 4CX3000A tube at $2,950.00

Crating by a professional packer is $250.00 additional and is not
included in the above prices.

A complete service manual is included at no charge.

A Collins 671B-1 Receiver/ Exciter designed for use with the 20-U-3 is
in stock at $1,000 in good condition.

We stock a complete line of Collins URG-1 (universal Radio group I)
major components and manuals.

There are complete specifications of this item on our web site in the
HF section.

Now on eBay: Drake SPR-4 communications receiver. Solid state, fully crystalled (all slots filled), optional SCC-4 xtal calibrator installed. Covers all major shortwave, ham, CB and commercial broadcast bands. AM/LSB/USB/CW. Have original factory manual. Excellent condition. This was recently up for auction on eBay but high bidder backed out so here's a second chance to get this superb communications receiver from the leading makers of shortwave radios - R.L. Drake - made in the USA.

Check it out at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=475703204

I know you said to email direct, but I read the previous
reply and agree 100%. Those are the exact two (HQ-180 and
SX-115) that I was going to mention. Once you have used a
180, the 100, 110, 145, etc seem like they are asleep. And
since you said 70's, the Drake R4-B and C merit attention.

Each have there own merits, Everyone has there favorites.
I could tell you what I like and dislike about the HQ180, and SB301 etc.
But my oppinion for a standout receiver?
The little Drake 2B...and then 2C.
My 2B has the 75A4 beat in almost every category except perhaps dial
calibration.
What an amazing little unit for its' time!

Frank,

The first thing I would go after is to check that the power supply is
stable.
Then I would
see if one of the frequency-determining components or a decoupling cap
might
have failed. Is the frequency drift associated with a particular band
switch
setting?

73,

Brian W6BY

Source record: 60028

HI Phil,
Thanks for letting us know about the SX-28 update on your website
http://antiqueradio.org/halli12.htm
It's terrific, as is your SX-42 page. I've been thru my SX-28 recently
(not finished yet), and it would have been a real bear without A.B. Bonds'
notes. YOur amplification, description, & fotos are great.
How did your panel screw problem come out? The ones holding the side
panels to the chassis are the same self threading ones as I described to
you from my SX-28. The front panel screws on my 28A were missing when I
got it, but its' side ones are the same. I didn't think to look at the
side ones earlier.
I've got to "revisit" the osc. secn in my 28, just like A.B. says you
don't want to do. I don't think it's oscillating, I'll stick the scope on
it b4 I get the screwdriver, etc.

Source record: 60029

Hi folks,
They are not the originals, but once installed, the only visible
difference is that they are "satin black" instead of shiny black.

These are the same outside dimensions as those on all (that I've seen)
4-lines & TR-3/4's, but do not have the soft rubber insert that some have.
They are plastic, with a very slightly soft feel, not shiny, but "flat
black". They are 5/8" tall, tapered 15/16" to 3/4", and have a hole which
will pass a #10 screw, the usual one used, but these are not threaded, as
the originals are. A #10 nut will press into the recessed bottom, as will
a #8 nut. They come with a metal flanged insert that fits tightly into the
hole, and that will pass a #8 screw. So, you can use either a #10 or #8
screw & nut, supply your own. The std #10's are not long enough to re-use.

Basically, they are $.50/foot, plus shipping of $1.00 for the first 4, and
$.25 for each additional 4. Please, let's do it in multiples of 4. Here's
a breakdown:
number
of
feet cost, incl. shipping
4 $3.00
8 $5.25
12 $7.50
24 $14.25

Thanks to the dozens who responded. I asked about such a
socket a few weeks ago and got zip for response and thought
they must have gotten rare! I guess "Drake" was the keyword
to explain what I was looking for.
FYI, Digi-Key stocks them, but says supply (160 in stock) is
limited. Mouser says they are discontinued.

3337. Wanted: RAYTHEON CB GEAR AND HISTORICAL INFO (Apelco and SBE info too!)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-23 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <FO%I5.26$W94.1140@dfw-service2.ext.raytheon.com>
Source record: 60036
Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hello to all!

I am a collector and restorer of vintage Raytheon CB radios and walkie-talkies. In addition to building up a personal collection of equipment and literature, I am attempting to document the history of the Raytheon CB line, which spans the period from 1960 through about 1972. All of the info that I collect is being shared with the company archives, which, until I began feeding them information, contained NO record at all that Raytheon had ever been in the CB radio market at all!

What I'm looking for...
I am seeking Raytheon CB radios and walkie-talkies, in any condition (but preferably GOOD condition), along with parts, microphones, crystals, owner's and service manuals, sales literature, catalogs, magazine advertisements, and so forth.

I've already established that Raytheon's CB equipment was made by the company's Apelco division. I also know that Raytheon owned SBE from some time in the mid 1960s through about 1971 or 1972. The last two Raytheon CB models sold were SBE products with Raytheon logos on them. Apelco also made CB gear for Webster, Sears/Allstate, and other brands.

I'd like to correspond with folks who had some first-hand experience with Raytheon, Apelco, or SBE CB radios from 1960 through about 1972. If you worked in the CB business for one of those companies (manufacturing, design, sales, etc), or were an independent dealer who sold or serviced those brands, please contact me and share your experiences. Unless you have some real historical information, I'm not really interested in correspondence from folks who owned or operated those radios (nothing personal, but I'm really seeking historical data only at this time).

Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

Sorry if any hams are offended by my CB-related posts being placed on three ham radio newsgroups. The fact of the matter is that most of the Raytheon CB historical info that I've collected to date has come from hams and not from CBers!

Gee, it just depends. I had a Hammarlund HQ-100C. IT was a good
receiver, but needed a bit more sensitivity. The QMultiplier made CW
a lot better. I also had a Heathkit SB-301. It seemed like a great
reciever. So was the receiver in my SR-150 Xceiver.

But from what I remember, the Hammarlund HQ-180 was a great
receiver and so was the Hallicrafters SX-115. Just my opinion

I have heard several systems (domestic hi-fi, and amateur radio) which use power transformers for audio. All have been way better than "acceptable" - but probably useless to audiophreaks.

It is always worth experimenting with negative feedback to improve the quality and reduce distortion; but of course you lose gain and have to make it up somewhere else.

Make sure that the negative feedback comes from AFTER the audio transformer. And too much feedback can lead to instability. Supersonic instability is worst because you can't hear it; you just /know/ that all is not well and you get seemingly impossible multimeter readings - eg minus twice the B+ voltage on the control grid, etc.

I've always found it easy and satisfactory to take NFB from the load side of the output transformer, to the cathode of the first audio stage. It is

then easy to reverse, and easy to adjust. If you put a pot across the load, you can get anything from 0 to 100 % of the maximum NFB. Also, that way, there are no capacitors in the NFB path, to make the amount of NFB depend on frequency. So, in theory, it should go a long way to compensate for the power transformer's shortcomings as an audio transformer.

More than once I have replaced a faulty single-ended 1 to 4 watt output transformer with a tapped 6 V mains transformer; and the customer has later told me that the sound is "better than it's ever been before". (Again, not a remark you'd expect from audiophreaks.)

I'd say - go on, try it. If you don't like the technique, you can always abandon it. But try it a few times first.

Source record: 59915

For sensitivity and selectivity, I like the Collins R-390A. Weighing in at about 85 lbs and with early models stretching back to the early 1950s, it may be in a different category. But some of the best performing models were manufactured in the late 1960s. With sensitivities in the range of 0.05 uV and less on CW, and about 0.1 uV on AM, it's tough to beat. And with selectable filters at 0.1, 1, 2, 4, 8, and 16KC and very steep skirts, it's easy to pick a very weak signal given only minimal separation from nearby strong QRM. And the R-390A does a respectable job on SSB with the a simple modification, and an excellent job on AM (though the audio response is limited). For sensitivity and selectivity, a "well tuned" R-390A does a great job. Of course, the ones you find today at a hamfest or on eBay typically don't start out with the above stated levels of performance.

For great sensitivity and easy listening when the noise levels start to climb, nothing seems to perform like the Hallicrafters SX-115. I have never heard so quiet a receiver, when everything else in the shack was hearing much higher levels of noise. Unfortunately, this experience was not in my shack, but at a friend's.

And yes, the Hallicrafters SX-28 or 28A beats the others in the sound and looks category, but has only marginal sensitivity and selectivity. Of course we have now moved back to the early 1940s.

Does anyone have a circuit diagram or (service) manual for
the Pye T30 AM transmitter? Or know of a source? All reasonable
costs paid.

The transmitter did about 50 watts of AM from a QQV06-40A driven
by a Qv03-10. The rest was solid state. A sort of boatanchorette,
but it still weighs plenty.

After close to 24 years of hamming, my all-time favorite receivers for
serious hamming are, in order, the Drake R-4C (with full complement of
CW and SSB filters and the 4NB noise blanker), Drake 2B with 2BQ, Drake
2C with 2CQ, and Heath SB-303 (with CW filter).

Hi,

Thanks for reading this. I'm trying to complete my collection of equipment made by R.L. Drake Company.
I'm still looking for MR 3 and MSR-1. The receiver may be working or not-working. Units in any condition are of interest.

There are also some other Drake units I'm still looking for. Below is my updated "Drake Wanted List". I have long experience in buying equipment from North-America and Europe, and I have several referencies. A friend of mine in Indiana may export for you if you are in USA.

DRAKE EQUIPMENT WANTED, UPDATED OCT. 24, 2000

- AN-5 ANTENNA KIT
- HPF100 HIGH PASS FILTER, ATTENUATES 0-52MHz
- IN-4 DC TO DC INVERTER (NOT THE IN-4B)
- L77 LINEAR AMPLIFIER; SIMILAR L7
- LN-5 INDUCTUBE; AC POWER LINE FILTER
- MMK-33 MOBILE MOUNTING KIT FOR TR-33C
- MN77 MATCHING NETWORK
- MN4438 MATCHING NETWORK
- MN4439 MATCHING NETWORK
- MODEL 505A POWER RECTIFIER UNIT FOR TRANSMITTER AN/ART-13A
- MODEL 522 POWER RECTIFIER UNIT
- MODEL 579-60 LOW PASS FILTER, 67MHz CUTOFF
- MODEL 587 AUDIO BAND PASS FILTER FOR USE BETWEEN MIC. AND TX
- MR-3 MARINE RECEIVER
- MSR-1 MARINE RECEIVER
- R77 COMMUNICATIONS RECEIVER; SIMILAR R4245
- R77-SM COMMUNICATIONS RECEIVER; SIMILAR R4245-SM
- SPEAKER MATCHING SPEAKER FOR THE 1-A RECEIVER
- TR77 TRANSCEIVER; SIMILAR TR4310
- TR-V MARINE VHF-TRANSCEIVER
- TV-300-FMT BAND REJECTION FILTER 88-108MHz
- TV-300-10HW HALF-WAVE HARMONIC FILTER
- TV-300-15HW HALF-WAVE HARMONIC FILTER
- TV-300-45T BAND REJECTOR, ADJUSTABLE 40-46MHz
- UHF-300-HP HIGH PASS FILTER

Thanks for your help to make my collection complete!

3361. Valiant Notes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-24 00:00:00 UTC
From: jarodenbarger@stew-01.cea.purdue.EDU
Message-ID: <iss.343a.39f5ece5.c61b2.1@scribe.cc.purdue.edu>
Source record: 59924

Hi All,
Well, the Valiant/SX-73 project is drawing to a close, many thanks
to all who've helped me out during this exercise.
Here's some things I've learned, and I thought I'd post 'em here for
everyone's benefit.
1. Replace R-3. That's the 18K, 2W resistor in the VFO box. It will
go short and wipe out the 0A2 and char the micarta. I put a 18K
10W unit under the chassis, and I doubt it'll ever need to be diddled
with again. Check the 0A2, mine was at 115 volts.
2. Tighten the nuts on the bolts that hold the VFO coil in place.
Mine were very slack, and I put locktite on 'em for good measure.
3. While you've got the VFO box strung all over your bedroom
(that's where my shack is...Shades of 1971!) Check everything else
in there for shorts, etc.
4.Use a 6AH6 instead of the 6AU6 (I may have these #'s off, don't
have the print in front of me) I've been told the AH is a "ruggedized"
version of the AU...
5. check for cold solder joints. Yeah, I know, but there it was, 40
years old and just now starting to cause trouble....
6. Replace the low-volt rectifier. Mine was dropping almost 100V
across the plates. The replacement drops less than 30V. (I
replaced the filter caps about 15 years ago)
7. I re-tubed the RF chain except for the finals. The 12AX7 keyer
tube was flaky. It wasn't until I replaced it that I was able to see
how the keyer circuit is supposed to work.
8. If you replace the driver tube, you should re-neutralize the finals.
I didn't, and guess what I have to spend a Saturday morning
doing....:(
9. In line w/8 above, do your ops checks on all bands, not just
80M. Ol' Betsy sounds just great on 160 and 80, but it sounds
worse that a Russian on 20 and above. Didn't find this out until all
576 case screws were driven home....

So, there it is, I know you already know this stuff, but I put it here
for the benny of the other newbies on the list. The Valiant sounds
just super now (as long as I stay below 40M) and I'm sure it'll be
OK once I get the finals neutralized .

I don't like those bare terminals carrying AC either. I see no reason
they needed to do things that way. .01 caps inside the cabinet should be
fine. If you are not aware of the current values I will try and look
them up when I get home.

3367. HELP Hallicrafters SX-140

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-24 00:00:00 UTC
From: Heath <radiovintage@hotmail.com>
Message-ID: <YZpJ5.18590$4u4.900727@nntp1.onemain.com>
Source record: 59930

I have been unable to access the bama site so I was hoping someone here could answer a question for me.I have an SX-140. I want to use as part of my vintage station but have no manual on it. I need to know what functions are available on the 4 terminal screw strip on the rear of the chassis.
THANKS

See pics and also page 88 of new AES catalog. Much nicer than a Bird
43. Has 4 1/2" taugt band mirrored scale and uses all standard Bird 43
elements. Has female QC N-connectors same as Bird 43.
Cost $250.00 plus ship, will sell for $190.00 plus $7.00 to ship
via priority mail. Has the optional N-connectors on this one. It has
been used about 5 hours since new. Comes with original manual also.
Look at the pics. REPLY VIA E-AMIL if interested.
Here is where the pics of it are....

<< Hi. I am taking an informal survey. I would like to know what you consider to be "the best of the best" (Collins of course, but what others?) ham receivers of the 60s and 70s? >>

The "best" for what? CW? SSB? AM? For convenience and performance most new Japanese rigs blow away any of the old timers on CW/SSB. But for AM use, there's a few that outshine anything Japan has to offer: these are Hallicrafters SX28, the National NC300, and the Hammarlund Super Pro.

From: danos@aztec.asu.edu
Message-ID: <8t33qu$b62$1@news.asu.edu>
Source record: 59911

Please help an old ham! I need a modulation transformer that has taps
on both the primary and secondary. I would like one that has the terminals
or posts. It should be one that is somewhere between 50 and 100 watts.

Also can anyone verify what someone had told me ; that I could use a heavy
duty isolation transformer in place of the modulation transformer?

I have this 500 va rated power line isolation transformer that someone said
would do rather nicely for the am modulator.

I am building an antique styled rustic looking rig for the fun of it.

Please contact me.

3380. A Good Word for Ebay

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-25 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <8t73h8$j5v$1@nnrp1.deja.com>
Source record: 59937

Hello Folks,

I know I'm opening up a can of worms, but here goes. I'm not crazy about Ebay, but it does have its uses. Us BA types may be missing some great goodies, though.

Been surfing at random through ebay recently, and I've found quite a few interesting things for auction at low prices with no bids or very low bids. The problem seems to be that the categories and descriptions are aimed at the wrong audience. For example, there's a really nice LM-22 with cal book and power supply listed at $1 (!) with no bids, because it's categorized as "WW2 Field Equipment" and the title is something like "Navy Frequency Indicating Meter". (Shipping on the thing isn't cheap, though, but if you live near the seller, might work out).

Found lots of nice tubes going begging because they are listed as "radio tube" or just "tube" instead of "vacuum tube".

Lots of other examples, but you get the idea. I found this stuff by pure chance while "cyber window shopping".

I think a lot of this is due to sellers who don't really know what the items are, nor what category it belongs to. I shudder to think that some of these things wind up in landfills.

Standard disclaimer: I have no connection to the items mentioned, nor their sellers. I'd bid on lots of the good stuff but I have no place to put any more goodies! I've bought and sold a few things there, but only after more conventional means failed.

Source record: 59945
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I recently purchased a variable regulated power supply to use as a filament supply. When operating well within the allowable range 0-20 amps, the unit makes considerable noise from transformer windings. I am aware that some transformers were impregnated with resin during manufacture presumably to reduce noise and moisture. Has anyone tried impregnating a transformer with resin to reduce noise after the transformer was in service for some time? Any comments welcome!

Norman

Another vote for the Drake 2B! It still impresses me to this day for it's small size and big performance.

For sheer BA enjoyment - an HQ-120 from 1938 is hard to beat. I listened to Glen Miller and Artie Shaw with mine yesterday.
(WWCR was braodcasting the oldies on 49M)

I also compared listening using a HQ-100 - SX-99 - HQ-140X - S-38D and a Kenwood 2000.

It sounded best on the '120.

I think the radio was "tuned" for that kind of music. ;^)

Never done so myself but I believe it is practical. What may be easier,
and can be effective, is to screw some stronger lamination clamps on
the the transformer, squeezing its laminations together.

This is done quite often and can be done easily.You can also drive in strips of door shims to quite it up. But their is also the old swat on the corner of the laminations with a hammer .This will shift the laminations on a C core to quite it down ,This is a old TV repair trick.Crude but effictive.

YA know, I remember back then. Evenyone thought his
receiver/transmitter/antenna was the best. You know what?
Everyone was right.
IT is really a matter of opinion. Ham radio is sure fun isn't it.
Henry, K7WAR

Where in the UK did you find a T30AM, I have always fancied one of those ever since I gave away my old F27AM. Something to do with the QQV06-40 I guess.

I dont know what I would do with an AM TX though........

I could probably find a circuit somewhere if you get stuck.

Regards

Kilo

HAMFEST October 29, 2000 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 29, 2000

LINDENHURST, LI - NY

On October 29, 2000 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam session. Current ARRL/VEC fee is $ 6.65,
exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 136.5 PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

Might anybody out there have a Cetec Vega model 212A Repeater Tone Panel manual they might part with or copy for me. I need the whole manual but really, really need the schematic and layout for the 260 interface board. Gladly pay for copying and postage costs. Please reply via email. Thanks Don KB6GQA

3423. FS: Johnson Viking II & matching VFO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-26 22:07:41 UTC
From: gspubl@tca.net
Message-ID: <39f8ab00.7243755@news.tamu.edu>
Source record: 59977

FS: I have a pretty clean Johnson Viking II and matching 122 VFO that
I have had for about 8 years. I was
using it about 5 years ago and it has been stored ever since. Front
panel has one small blemish on upper
left side above the knobs (in the gray part of the paint). I have
manuals for both units and want $250 for
the pair. Call Mike at (979) 693-1461 eves. and wknds or e-mail to
gspubl@tca.net

I have recently acquired one of these, I believe made circa 1964. It's in excellent condition, and complete with all the factory papers in their brown envelope, as originally delivered.
I don't know how long it is since it's been powered up, probably 10 years or more.
I'd sure appreciate any tips on things to watch for when reviving it!

TIA

Dave McDonald
Johannesburg, South Africa

3430. FS: WWII BC611 BX-49 crystal boxes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-27 11:37:49 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <8tbpeaqgq1@mailint03.im.hou.compaq.com>
Source record: 59984

I have some BC611 BX-49 Crystal boxes available, 12 channels, range 4035 to 5500 kHz. The box is OK but the white plastic tags on the outside of the box are a bit deformed and curled from where the tags stick out of the tag holder. The plastic suffers from old age I reckon. The tags have the channel frequency written on them. Because the tags are curled a bit and because the plastic is become brittle I can't 100% guarantee they won't brake during transport but I don't think this is likely. This is the only negative thing I can think of. The box it self and its content are in fine condition taken in account that it dates from 1944.

Price is 35US$ per box, shipping to the US is 15$ extra. With a bit of luck 2 boxes will ship for 15$ when below 5 kilo. Next shipping class is 30$ for up to 10 kilo.

Nico PA3ESA

The worst thing is applying dc to the filter caps too fast. I use a bench supply and with no power to the tester hook it across a cap. Slowly bring the voltage up to operating voltage. Ken

Hi,
Dave McDonald asked:

>> I'd sure appreciate any tips on things to watch for when reviving it!

Plug 'n' play. You won't have any problems with caps, but some of
the switches may be tarnished and not making contact, from not being
used periodically.

If by chance something did short out, the #81 "fuse" lamp wil tell
you. It shouldn't glow at all unless you're testing a power tube.

Cheers, Alan

3436. FS--Parting out Heath TX-1 "Apache"

Newsgroup: rec.radio.amateur.boatanchors

I am parting out a Heathkit TX-1 Apache CW/AM transmitter. Email me with your needs/wants. Most parts available including full set of original knobs, front panel in great shape, etc.

73,
Bob Weiss N2IXK

3437. Re: WTB: Cabinet for Heathkit DX-100 or Heathkit Worrior

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-27 21:03:24 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <39F9ED9C.2CE297FC@carroll.com>
Source record: 59990

Do you still need this cabinet? I am parting out a TX-1 "apache", and I think that the cabinet is the same as the one from the "warrior". Cabinet is in good physical shape (no dents or extra holes drilled in it), paint has a few scratches, but nothing too bad. $30 plus shipping from 07657.

73,
Bob Weiss N2IXK

For Sale NEW 7036 (6BE6) tubes.
The boxes have the following information on them:
5960-00-074-4833 ELECTRON TUBE
1 EACH DLA900-82-G-0017-005
A-3/83 GE-7036 GENERAL ELECTRIC CO. Tubes are 5 to a sleeve.
The 7036 is electrically the same as the 6BE6 but it physically
taller. It is the same height as a 6AQ5 so tubes shields will
not fit from a 6BE6.
$10.00 per sleeve plus $3.20 priorty mail shipping U.S. locations only.
1-4 sleeves $3.20 priority mail shipping
4-8 sleeves $6.20 priority mail shipping
Thanks Larry WA9VRH

When was the original post of this message? I have no record of this on my server(Road Runner) which makes me wonder how many postings I am missing? I have an 800A which had a very touchy English control. No amount of spray seemed to help. It required dismantling the control and cleaning all the old dried lubricant out, whatever it was, and applying a coat of DeoxIT with Q tips. Now it works the way it should. I think having one control covering all three ranges, as opposed to a switching arrangement on others, makes a slight movement of this control cause a large change in the GM reading. The nice feature of this tester is it covers a wide range of tubes from O1A up to the modern compactrons and 10 pin types. Leakage up to 10 megohms can be read on the meter. Price in 1967 was $220.

3443. Yaesu FT-101-E Station "Complete" For Sale:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-27 23:58:20 UTC
From: yardleyite@aol.com
Message-ID: <20001027195820.21616.00000147@ng-mj1.aol.com>
Source record: 59847

Dear BA Listmembers,
Sometime ago I listed a complete Yaesu FT-101-E station for a friend of mine who became ill. At that time he wouldn't sell anything seperately. The station is still for sale but this time he agreed to sell things seperately and break it up since he needs the money. All prices listed are plus shipping. All pieces are in excellent condition, most having the original plastic covering on the fascia and their shipping boxes.
The only problem is a bit of cigarette smoke residue that may have to be cleaned off. All pieces have their respective interconnecting cables (if applicable) and manuals.
I apologize to everyone who replied before but unfortunately I wasn't able to retain all of the email I received due to computer problems. I told my friend either he breaks up the station on I'll inherit it someday!

Please find the following equiptment and prices:

1) Yaesu FT-101-E tranceiver $350.00 (has fan and speech processor, mike, no CW filter)
2) Yaesu Landliner spk/patch $65.00
3) FTV-250 2M Transverter $140.00
4) YC-601-B Digital Display $75.00
5) Accessory speaker #1 $50.00
6) Accessory speaker #2 $50.00
7) FR-101-S receiver $225.00 (has FM board and 2M conv. Needs repair)
8) FV-101-B external VFO $115.00
9) YO-100 Monitor Scope $110.00
10) FL-2100-F Amp $350.00 (does not have 10 meters, 2 ea. 572-B's)

Again, the package deal (preferred) for everything above is $1100.00 or best offer.

73 and thanks for the bandwidth,
Joe N3IBX

THE COMMUNICATOR

I just got here to relieve the watch,
nothing is happening, at least not much.
The man at the desk passed me the word,
so listen my friends, here's what I heard:
"The broadcast is good, all circuits are up,
the coffee is fresh, pour yourself a cup.
All traffic is out, there's nothing to send,
we've got the beach fivers; got a cigarette to lend?
Your freqs are all solid, no gear has gone sour,
we haven't changed anything for over an hour.
The Bridge has been quiet, and COMBAT's asleep,
the phones have been silent, nary a peep.
The log's up to date, the filing is done,
so I'll see you later, and hope you have fun"

And with those fine words he did depart,
leaving the watch with a very good start.
A few minutes have passed, or so it seems,
When in walks the OPS boss with my first two routines.
"They have to go quick, I drafted them late,
so treat them as Oboe's, they just can't wait.
Yes sir, I replied, we'll get right on them,
I don't believe we'll have any problem.

I logged them in and said to the tape man,
do a good job; go as fast as you can.
He said that he would and as I flicked an ash,
the broadcast operator yelled "here comes a FLASH!"
Route it COMBAT, the Bridge and to OPS,
and hurry back, make no other stops.

He grabbed it and ran, wasting no time,
and then the phone rang, was the XO on the line.
"Got another down here, can you come get it?"
Yes sir I replied, be there in a minute.

To the wardroom I went for an Oboe no doubt,
and when I returned the broadcast was out.

Proofed all the outgoings, and got them released,
XO had another, it was really a beast.
Twenty addee's; can't find half the routers,
then in walks the SUPPO with four more dam outers.
"When they'll go out I can't really tell,
cause right now sir, we're busy as hell.
Send those four out and please make it quick,
I said to the Ship/Shore Op, who was getting sea sick.
But he replied that there'd be a delay,
for the beach had just gone down for New Day.
I wondered what else could possibly go wrong,
but lucky for me we didn't wait long.
For the next event in this strange episode,
came when those glorious "Snipes" dropped the load.

We lost a 32, a seven and a nine,
oh, why does this happen to me all the time?
I called the ET's and let out a yelp,
"My gear's burning up; I'm gonna need help!"
The Bridge called in, said their circuits were down,
"We're doing our best" I replied with a frown.
Then COMBAT called to tell me the same,
MY GOD! I think I'm going insane.

We brought all circuits up, with maximum power,
OH! Just remembered. Ain't checked my basket in over an hour.
Phones ringing again, the XO no doubt,
he wants to know if the traffic's gone out.
OPS boss called, he's got two more,
and some fool is banging on the door.

Broadcast is back, but getting tough,
we just hit a storm, the seas are getting rough.
Chief came in, wants to see the Pub Check-off List,
I told him that during the outage twenty numbers were missed.
Things are falling all over the floor,
and that fool is still banging on the door.
I pleaded and begged, "Please cut me some slack,"
oooh boy! I wish I was still in my rack.

My outgoing backlog now tallies eleven,
but the tape cutter has only done seven.
My incomings now number thirty-two,
boy! This place is just like a zoo.
Got six more Oboes to run around,
and the seas are really beginning to pound.
The storm outside must really be mean,
Cause my Ship/Shore operator is turning green.

Then all of a sudden the storm had passed,
And we got the beach on Ship/Shore at last.

The broadcast is now holding in tight,
everything's beginning to look alright.
Cleaned all the traffic and cleaned up the floor,
even got around to answering the door.
Service came in with all the numbers we missed,
and I finally signed off the ol' Pub Check List.
Slotted all traffic and routed the boards too,
and hey! Believe it or not we're QRU.

My relief just came in to relieve the watch,
now nothing is happening, at least not much.
Sitting at the desk I passed him the word,
so listen now friend, here's what he heard:
"The broadcast is good, all circuits are up,
the coffee is fresh, pour yourself a cup.
All traffic is out, there's nothing to send,
we've got the beach fivers, got a cigarette to lend?
Your freqs are all solid, no gear has gone sour,
we haven't changed anything for over an hour.
The Bridge has been quiet and COMBAT's asleep,
the phones have been silent, nary a peep.
The log's up to date, all filing is done,
so I'll see you later, and I hope you have fun.

(Just another watch in radio!!)

Thanks and a tap of the key for "Tom Chirhart" <sparks@codepoets.com>
who supplied the "Sparker's Poem".

Incidentally, Tom is leaving the Coast Guard next Thursday
for a position with the Department of Commerce, National
Telecommunications Information Administration (NTIA) and will start on 11/6.
He says it was fun at CGHQ Telecommunications. He was on the Technical
Evaluation Team for the National Distress and Response System
Modernization Project.

You may contact him at:

For all you R-390A/URR receiver owners out there these tubes will
work for the internal SSB conversion. The web page with the information
is at http://www.eagle.ca/~harry/ba/r390a/r390assb.htm I did this mod
to an EAC R-390A/URR and it now performs very well when receiving SSB.
You only need one tube per R-390A/URR but if your like me you might be
able to use an entire sleeve on several R-390A's!

I am interested in buying an inexpensive 1750 meter transmitter and or beacon.Homebrew is ok and may be tube or solid state.
I am disabled with a neuro-muscular disease so it can not be a kit because I am unable to solder small components any longer.Price is also a concern due to fixed income so if you have anything you think I might be able to use please e-mail me with details and price.

Hi,

A friend is looking for a scheme of a receiver with the number RS 111-18-14,
built by Rockville.

But since Rockville is a city in Maryland and has a Racal branch,
perhaps.....

Any ideas?

Cheers,

Piet

My friend means a Watkins and Johnson rx and yes :-) RS 111-18-14 is the serial number.

A NATO rx, 30 MHz-1GHz, panorama display, not a real boatanchor, probably.

3458. "Illegal" Equipment- From the ARRL Letter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-28 13:05:49 UTC
From: "David L. Stinson" <arc5@ix.netcom.com>
Message-ID: <39FACF2D.94294C8C@ix.netcom.com>
Source record: 59862

There seems to be some ongoing confusion about this.
Amateur Radio equipments, including homebrew and
military surplus units, are NOT required to be certified
by the FCC. CB Equipment IS so required.
Therefore, the FCC is talking about illegal CB amplifiers
and phony "ham" rigs like the so-called "Galaxy" transceivers.

73 DE Dave AB5S

From The ARRL Letter
Vol. 19, No. 41
October 27, 2000:

> =>FCC TO MONITOR AUCTION SITE FOR ILLEGAL ITEMS
>
> The FCC says it has reached an agreement with the eBay auction site that's
> aimed at curtailing the sale of clearly illegal radio equipment.
>
> FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says
> eBay has agreed to cooperate in removing advertisements in which the item
> for sale "is clearly non-certified" under FCC rules. Hollingsworth said most
> of the equipment involved falls into the CB category, including illegal
> amplifiers.
>
> Hollingsworth agreed to publicize the initiative at the urging of the ARRL
> Regulatory Information Branch's John Hennessee, N1KB."I've got a whole
> folder of people who have been complaining about this and will be delighted
> to know that the Commission is taking action," Hennessee said.
>
> Hollingsworth said a review team within the Technical and Public Safety
> Division of the FCC Enforcement Bureau is screening eBay ads each week. He
> said the practice could be extended to other auction sites if the FCC learns
> of similar problems.
>
> Hollingsworth credits complaints from the Amateur Radio community with
> getting the new system in place. "I've been collecting complaints for a
> year, but the amateur community really generated it," he said. Hollingsworth
> says he sees about 10 complaints a week about auction site radio gear
> advertisements--sometimes several about the same ad. He cautions that
> complaints should be based on clear-cut FCC rules violations, such as
> attempts to sell illegal linear amplifiers.
>
> Amateurs can send items to fccham@fcc.gov, Hollingsworth said.

Piet,
I think your friend will find that RS 111 is the model number and
the -18 and -14 are options installed at the factory. Someone else may be
able to point you to where you can find a schematic diagram. Good luck.

I certainly hope they interpret this correctly as none of the "old" ham equipment is certified, nor is it required for surplus and homebrew "as you said". New commercially manufactured ham equipment does require certification, but that is done before they can market it.

<< I certainly hope they interpret this correctly as none of the "old" ham equipment is certified, nor is it required for surplus and homebrew "as you said". New commercially manufactured ham equipment does require certification, but that is done before they can market it. >>

I think the eBay/Hollingsworth effort is targeting two things: amplifiers that are designed and marketed specifically to transmit on the CB band, and transcievers that have wideband 25 to 32 MHz capability and are designed specifically to appeal to CB buyers. The sellers of this type of equipment try to camouflage their activity and evade the ban by listing their gear as "amateur radio amplifier" and "10 meter ham radio" etc.

PS> From what I hear, Hollingsworth is a BA enthusiast himself.

I have a RS-111 manual, but it would not be cheap... WJ is now in Gaithersburg, MD and has been sold to BAE. BTW you can't even hardly get warranty service from WJ for their current junk much less get manuals for old-timers like the RS-111. Most RS-111s cover 20-1000, not 30-1000.

Why do you need a manual? Is it busted?

Source record: 59883
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

The time has come to clean the garage!

The following are available:

1) Lambda 5-volt regulated power supply. 31-amps at 40C, 24.6-amps at 50C. Works well and is an ideal filament supply for a pair of 304TL/TH tubes if you want to run them on DC. Approximate size: 5"-tall x 8"-wide x 18" long. $25.00 plus shipping from northern California (kinda heavy).

2) Heathkit W5M amplifier. See at http://www.awwwsome.com/normb/heathw5m.jpg $250.00 plus shipping.

3) TV test equipment lot including a virtually unused Sencore sweep generator with markers. Pictures at
http://www.awwwsome.com/normb/tv_test1.jpg
http://www.awwwsome.com/normb/tv_test2.jpg
http://www.awwwsome.com/normb/tv_test3.jpg
$50.00 plus shipping for the lot.

4) Bias Supply built by UC Berkeley Electronic Labs. Meters are 0- to 100-volts and 0- to 50-milliamps. Working. Built around 1950 with engraved polished bakelite faceplate and solid oak cabinet. Size: 11" x 11" x 14". A real classic supply. Great condition. $15.00 plus shipping.

5) DC Filament Supply built by UC Berkeley Electronic Labs. Meters are 0- to 15-volts and 0- to 5-amps. Construction matches bias supply above. Uses variac for voltage control. Size: 12" x 12" x 20". Good condition. Heavy! $15.00 plus shipping.

6) Heathkit BE-4 "Battery Eliminator" 0- to 6-volts at 10-amps continuous -or- 0- to 12-volts at 6-amps continuous. Very good condition and working. Size: 7" x 8" x 14". $15.00 plus shipping (includes EICO manual for very similar supply).

7) Mallory "Rectopower" Supply. Electrically near identical to Heathkit BE-4 but housed in a smaller cabinet with an inclined control panel. Supply works but ammeter does not. This supply has intermittent ratings of 20-amps on the 0- to 6-volt setting and 10-amps on the 0- to 12-volt setting. Size: 7" x 7" x 14". $15.00 plus shipping.

8) Valcom 48-volt, 2-amp regulated telephone power supply. NOS in original box!
Size: 7" x 8" x 10". Also $15.00 plus shipping.

Any of these not committed before Friday November 3rd will be taken to
the California Historical Radio Society swap meet at Foothill College
(Los Altos Hills).
E-mail with questions if interested.

Norman

Source record: 59885

Nice radio.Cabinet has been refinished but lettering could be done whiter
and clear coated. Small blemish by send/receive sw that is not very
noticeable. Chassis is very clean. Receives well except on band B from
12-30mc which signals are weak and reception is only heard on the high end
of the scale. All original caps and no mods are seen. Original speaker is
included and needs a repaint but works well. Also Selec-to-Ject presellector
included which also needs repaint and plugs into the assesory socket on
receiver. This is the single conversion model of the 183 series of
receivers. Original manual included. $250.00+S.H.
Please send zip to figure shipping if interested. This will be packaged in
three double boxed units and shipped separately. CONUS only!
Interesting trades also welcome. Take care!

Message-ID: <8tfr7m$4t4$2@uranium.btinternet.com>
Source record: 59889

NOW AVAILABLE, Program "SWRMETER.exe"

This program models and assists with the design of the
common HF Standing Wave Meter. Enter its essential
characteristics and the program constructs it and calibrates
it against the users standards ready for use.

Input data includes source/Tx internal resistance if known.

Extensive notes:- Principles, circuit diagram and
description, key component values, points to look out for.

Enter any load impedance R + jX and meter readings of
forward power, reflected power, reflection coefficient
magnitude and SWR are computed. Indicated values are
compared with true calculated values.

Continuously vary all input data in small increments on a
what-if? basis while observing meter indications.

Operating circumstances, including input resistance of
source, under which measuring errors will occur are
demonstrated and discussed.

This program is contained in a single executable file of
64.5 Kilobytes.

3488. Schematic for Hp 200 Audio Oscillator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-29 01:04:42 UTC
From: Hugo Kann <hmkann@home.com>
Message-ID: <39FB76C3.AACEC3B6@home.com>
Source record: 59890

Can someone steer me toward a Web site or other source for a schematic
for an HP 200 Audio Oscillator.
The unit that I have looks like a 200 CD on the outside, but the inside
is entirely different. My unit has six tubes (one 6SJ7, three 6K6, one
6SN7, and one 5AR4) versus the newer HP 200s with have only five tubes.

Any help would be much appreciated.

3491. Beautiful Yaesu FT-101-E and Accessories For Sale:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-29 02:01:13 UTC
From: yardleyite@aol.com
Message-ID: <20001028220113.08355.00000055@ng-fm1.aol.com>
Source record: 59893

Sometime ago I listed a complete Yaesu FT-101-E station for a friend of mine who became ill. At that time he wouldn't sell anything seperately. The station is still for sale but this time he agreed to sell things seperately and break it up since he needs the money. All prices listed are plus shipping. All pieces are in excellent condition, most having the original plastic covering on the fascia and their shipping boxes.
The only problem is a bit of cigarette smoke residue that may have to be cleaned off. All pieces have their respective interconnecting cables (if applicable) and manuals.
I apologize to everyone who replied before but unfortunately I wasn't able to retain all of the email I received due to computer problems. I told my friend either he breaks up the station on I'll inherit it someday!

Please find the following equiptment and prices:

1) Yaesu FT-101-E tranceiver $350.00 (has fan and speech processor, mike, no CW filter)
2) Yaesu Landliner spk/patch $65.00
3) FTV-250 2M Transverter $140.00 SOLD
4) YC-601-B Digital Display $75.00 SOLD
5) Accessory speaker #1 $50.00
6) Accessory speaker #2 $50.00
7) FR-101-S receiver $225.00 (has FM board and 2M conv. Needs repair)
8) FV-101-B external VFO $115.00
9) YO-100 Monitor Scope $110.00 SOLD
10) FL-2100-F Amp $350.00 (does not have 10 meters, 2 ea. 572-B's)

Again, the package deal (preferred) for everything above is $1100.00 or best offer.

73 and thanks for the bandwidth,
Joe N3IBX

Source record: 59804

FS : Pair of Plug in rectifiers for 872A tubes. Made by Wilkinson Electronics. No modification needed for your equipment, just plug them in, install plate cap and fire them up. These were pulled from an old RCA transmitter that was working when pulled out of service in 1990. They have 18 rectifiers on them with the balancing resistors, caps, and neon lamps for each rectifier. I have no way to test them but I did check for shorts across each diode with a Simpson 260 VOM and none are shorted or open. $45 shipped to your door. I also have a set for 866's. They have 10 diodes each and are $30 shipped. Same deal as for checking them out.
Thanks,
Jim

Message-ID: <01c041de$a1a40500$b34c96d0@ron>
Source record: 59809

The weather was perfect,
The site was great,
The fall color of the leaves was good,
The turn out of buyers and sellers was fantastic,
All this added up to one GREAT antique radio meet.

The CC-AWA's Greensboro/Jamestown Fall Swap Meet
that took place yesterday was definitely a success.

I estimated attendance at over 150 with more than 30 vendors.
There were lots of radios and parts for sell.
The place was littered with transoceanics.

When we turned in the park at about 7:20
the drive was lined with cars long before we got to the
parking lot where the swap meet was taking place.
I was afraid that we wouldn't even find a place to park
the van.

If you were there you know what a great event it was.
If you missed it, you really missed what was probably this
best Swap (mini) Meet we've ever had.

Brad Jones did a fantastic job of organizing it,
Thanks a bunch Brad.

I found a very unusual tube at the CC-AWA Greensboro/Jamestown
Fall Swap Meet yesterday.
We looked it all the tube books we could find but didn't have much luck.
I sent photos of the tube to our own expert Lud Sibley and below is his
reply. If you would like to see the tube, click on this URL,
http://www.RadioHeaven.homestead.com/VT_31.html

Lud wrote,

Oooooh! This would be a neat capture by itself: presumably a Royal Army
VT31 ("Valve Transmitting," of the general style of the Royal Navy T.4 on
the
cover of the Dec. '99 TCA bulletin, but of later design). Marconi-Osram
Valve
Co. seems to have been the designer of this style. The 10E/xxx stock
number on
the bulb is typical of "all" WW II British tubes.

The "holy xxxx" part is that Signal Corps inspection stamp. That says "US
manufacture." I don't have the inspection-office codes memorized (SC261
was colocated with either the Ken-Rad plant or RCA-Harrison, I forget
which),
and SC798 sounds familiar. Now, American manufacture of British tubes is
no
surprise: RCA made the 1637/VT52/EL32, 1638/VR54/EB34, and
1639/VR55/EBC33,
and I have an FW4/500 rectifier made by National Union. And we supplied
them with an ocean of American types. What is surprising is that a tube of
such
uniquely British design was also made here.

As for the "whatzit" (ratings) aspect: my conversion list relating "VTs"
to "CVs" and commercial type nos. does not include the VT31. Nor does the
Fathauer "locator." Keith Thrower's two books on British tubes don't
either.

Now, God bless Al Jones and his detailed tube inventory! He has one, and
the data base says "VT31/10E/8739 . . . U. S. (manufacture) . . . Machlett
(manufacturer) . . . Tetrode . . . TX (use) . . . T(ear)-drop (bulb) . . .
4 wires (base) . . . 1 (quantity) . . . Made for England"

The lesson that comes from this cheerful episode is that we need to collect
and publish the SigC inspection codes. I'd been on the fence on this idea
-"what good will it do?" - but the answer is clear: in cases like this, we
get a valuable clue as to maker! I'd better do a quick scan of the, er,
Gold

Hill Signal Depot, and then put out a general request for more codes.

Lud

Join the armyradios discussion list via this weblink:
<http://www.egroups.com/group/armyradios>

A discussion group for those who collect,
restore and operate Army radios that are
built for use by:

Western/NATO/Eastern-Bloc/ and Asian countries.

Such radios can be portable, man-pack, mobile,
clandestine, tactical, single or multi-channel
types of any kind as long as they were originally
for ARMY ground forces.

Modes can be AM, SSB, FM, RTTY or other data
types including spread-spectrum or covert/LPI

postings are NOT moderated.

postings to armyradios@egroups.com
are done directly by subscribers.

It is recommended that replies to postings
are also sent to, or cc'd to,
armyradios@egroups.com so that information
may be shared between all subscribers.

Attachments to e-mail postings are allowed.
It is encouraged that subscribers have full
internet access from their ISP, and not
ASCII/email access such as juno.com

Please don't whine at the list owner
about attachments or file exchange if you
are a juno user!!

Current net frequencies and net times are
e-mailed to new subscribers, and also
sent bi-weekly to the mailing list.

SPAMMING of this list and flame-wars will result
in the offending subscribers being terminated
from the list.

The PRIMARY purpose of this list is
discussion. Listings of for the sale and
purchase of equipment is also encouraged.

Thanx :-)

> tubes if you want to run them on DC.

No, please don't do this without a low-value resistor in series..
The in-rush heater current into the cold heater will be far too high
and you will burn out the heater in a valuable tube fast!
This supply could give much more current than spec depending on
the response time of the current limiter (if it has one)
I would check this closely before subjecting an expensive tube to
this treatment.

If it's anything like what TRW was yesterday, if you're not part of the "flashlight brigade" you might miss out. I had people SWARMING all over my van when I pulled in. They didn't even give me a chance to unload before they were poking around looking for stuff. "Whaddya got? Whaddya got? How much for this?" was the mantra of the morning. Sold more in the first 20 minutes than I did the rest of the day!

That is a 30 amp bifilar-wound filament choke for a tube type linear amplifier. Goes in line (in series) with the filament leads to the tubes. Drive will be applied on the tube side of the choke. Good for 80 meters up.

Dick

Anyone want to part out an s-meter for an HQ-150. It's the 'standard'
Hammarlund square 'orange' background meter used on many of the older
receivers. Looks to be about 2-1/2" by 2-1/2 ". My 150 is spotless
except for what looks like a cigarette melt spot on the s-meter face.
Thanks
Brian Denley

3546. OK to replace 12 uH inductor with 15 uH inductor?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-31 03:52:22 UTC
From: n4zou@my-deja.com
Message-ID: <8tlflkrei1@nnrp1.deja.com>
Source record: 59751

I am in the process of restoring a R-390A/URR and after having reworked the AF module. Started listening to some shortwave stations when the recever quit. A quick check reveiled a blown 1/8 amp B+ fuse. I traced the problem to a shorted out 12 uH inductor L-505 in the IF module. Also connected to the inductor is a 1/2 watt 2200 ohm resistor that is "cooked". I looked around the Mouser CD-rom disk I have the best match I can find is a 15 uH inductor Mouser part # 580-1415312 . I am wondering if this will be a good replacment part. Any one else out there have this problem before? Thanks in advance for any help!

I could not find an L-505 inductor in my drawings. L-502 in the detector output is 12 uH, however. This inductor does not have a 2200 ohm resistor connected.

Another possibility is the Z-503 assembly which does have a resistor in series and which supplies B+ to V-508. The coil in this assembly is L-514 in my drawings. This assembly seems to be a problem with many R-390A's. The capacitor and inductor values are not listed in the schematic, but the capacitor is 82 pF, so at 455 kHz the inductor would need to be 1.49 millihenries.

To replace this, one possibility is to use a fixed inductor of 1.5 mH and replace the 82 pF capacitor with a 68 pF one in parallel with a small 25 pF trimmer capacitor. Another approach is to use one of the TOKO adjustable inductors. These can be ordered from Digi-Key.

I suggested three models to a friend who replaced L-514 with a TOKO inductor. I do not remember which model he finally used but it worked fine.

73, Barry L. Ornitz WA4VZQ

Digi-Key Inductance Q Toko Number Price (6/99)
TK3203-ND 1.5 mH 60 126ANS-T1096Z $3.04
TK1233-ND 1.5 mH 50 RUNS-T1029Z $1.99
TK1705-ND 1.5 mH 80 CLNS-T1020Z $3.14

For the fixed inductor, consider the following
TK4314-ND 1.5 mH 90 187LY-152J $2.05

> I could not find an L-505 inductor in my drawings. L-502 in the
detector
> output is 12 uH, however.
L-505 is in the compartment under the 4 Mechanicals filters, it feeds
B+ voltage to pin 5 of tube V-501 (5749/6BA6W) and your right, L-502 is
the very same inductor as L-505. Here is how the B+ voltage is routed
to V-501. Resistor R-508 (2200 ohm 1/2 watt) taps on the switched RF-IF
B+ line, this is then connected to L-505 (12 MH) inductor with C-511
bypass capacitor (5000) to ground. Then the other side of L-505
connects to pin 5 of V-501 and C533 (.01uF) which blocks B+ voltage
from the 4 Mechanical filters. The location on the drawings is D-12
Figure 5-13 in the NAVSHIPS 0967-063-2010 manual. I can scan and e-mail
that part of the drawing if it would help. Thanks for the help... Scott

Hi all,

My name is Alex Wiecek VE3GOP, and I'm a member of the Polish Amateur Radio Club VE3XPL here in Toronto. We are currently trying to establish a listing of all polish speaking Canadian Ham Radio Operators living either in Canada or abroad. The purpose of this activity is to present a petition to the Industry Canada to obtain a temporary special event callsign to commemorate the 75th aniversary of the Polish Ham Radio Society in Poland. We tried contacting the IC office in Ottawa but they don't seem to be responsive and as such, we have decided that the next approach would be to present them with as many e-mail petitions as possible to make our voices heard.

We need your help, if you are a polish speaking amateur or know someone who is, we would like to hear from you.

Please contact me at alexwiecek@home.com, and if you'd like to learn more about our club, please visit
http://web.ionsys.com/~magnum/ve3xpl/index.htm

your help would be greatly appreciated.

Thank you.

73's Alex VE3GOP

==========
speaker transformer matching info

==========
sourceunknown
A solution is found right at the local Radio Shack. Purchase a 70.7 volt line transformer (cat. Number 32-1031) and connect the primary terminals marked "C" and "10" to terminals 6 and 7 on the left hand terminal block located on rear of the R390A. Then, connect the secondary side of the transformer, terminals "8" and "C" to your 8 or 4 ohm speaker. This will result in an 500 to 8 ohm match which will give good performance. A closer match may be realized by using a 25 volt line transformer and using the same configuration as above save for choosing the "1" and "C" taps on the primary side of the transformer. The secondary wires as above in the 70.7 volt line transformer.
==========
5/30/99
from Rick Smedberg, WA8YLZ

70v line xfrmr taps:

PRIMARY TAPS
.31 watts 14,000 ohms
.625 7,000
1.25 4,000
2.5 2,000
5 1,000
10 500
12 360
24 180
40 110

25 Volt line xfrmrs

.31 watts 1680 ohms
.625 840
1.25 440
2.5 220
5 120

======
Hi Jim -- just an idea. You can print your own on Avery products. They make
them in many colors -- including transparent. I affixed them to a 35mm photo I
took and it becomes a QSL card. For a sample of transparent use see URL:
http://www.qrz.com/database?callsign=ac6v
The AC6V is a transparent label printed on my trusty HP 812C printer. The
reverse side is a large Avery label with the QSl info printed on it.

And Mail box etc can make decals for you as well

3582. what's the trick with those lacquer sticks?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-01 18:05:01 UTC
From: philnelson@antiqueradio.org
Message-ID: <3a00580c.64819265@wa.news.verio.net>
Source record: 59786
Cross-posted to: rec.antiques.radio+phono;,rec.radio.amateur.boatanchors

After repainting the front panel on my Hallicrafters SX-28, I got out the two lacquer sticks (red and white) which I had previously ordered to fill in the lettering.

I thought the idea was to swipe on some color into the incised lettering, rub the excess off the surrounding area, and be done with it. Sounds like doing the whole panel should take five or ten minutes, right?

Not so fast! It's not hard to get the color into the incised lettering, but if I wipe over it hard enough to remove the excess paint from the surrounding area, it lifts the paint back out of the recesses. The more you rub that area, the more the lettering comes back out. After messing with this for about 20 minutes, I cleaned everything off and gave up for the night.

Is there some magical trick for doing this neatly and quickly? (For example, should I let the stuff dry overnight before removing the excess?) The only way I can think of to use these lacquer sticks is to whittle tiny tools out of popsicle sticks, use those to carefully squoosh the claylike lacquer into each letter, and carefully clean away the excess from around each letter with things like Q-tips or toothpicks. It would probably be less work to get out the tiny paintbrushes and just hand-paint the letters.

If you are Canadian citizens, why don't you celebrate something
Canadian?
Immigrants to Canada never cease to amaze me. It's no wonder our
national pride is going down the toilet. If you ask anyone on an
American street what nationality they are, they answer American. Try
that in Canada, and you never get "I am Canadian". Now, I'm not
pro-American, in fact I really find them quite annoying, but give it a
rest already. If Poland was so great, you know where the door is.

Hi,

I'm hoping someone can help with the specs on a Hammond 2180 transformer.

It still has the ceramic plate caps connected so I assume it was used with mercury vapour rectumfryers.

It measures 1100 VAC without load.

Any info would be appreciated.

John VE3PCN

I posed this same question a few weeks ago.

"Simply do what you did, then use isopropyl alchohol to wipe the excess off." it was suggested.

The problem I had was the RBO-2 I was using it on, has a crinkle finish and I couldn't get it off of that.

I guess just keep trying things. I've heard some people use "White-Out" with a tiny brush or maybe that popsicle stick you mentioned.

Good luck!

You can also use any, small 6.3 filament transformer. 110vac primary to 600 ohm side, 6.3 to the speaker. They work just fine!!!

I agree, Fred. Unfortunately, I fail to see Allan's point and how it relates to what they're trying to do.

Allan, a lot of the guys in the Toronto group have decided to leave their mother land because of political reasons and ham radio was not something that was going to keep them there - not one of them will metion that "Poland was so great" as you have so intelligently put it. The beauty of this hobby is that they were (and are) able to keep in touch with their buddies accross the pond on a regular basis using ham radio and thus, they'd like to celebrate their roots just like any other person.
Don't get me wrong here, just like every other Canadian they do pay their taxes, they do wear the red poppies on the Rememberance day and they do celebrate the Canada Day with pride.
Unfortunately, there are individuals who still seem to live in the "stone age" thinking that all immigrants ever do is steal our jobs and overpopulate already crowded metropolies. But they seem to forget the fact that immigrants also bring in their expertise and knowledge to make this country better - be it Canada or the United States or any other country for that matter.

Phil - let it dry for a bit then moisten a paper towel with turpentine (not wet, just barely moist). VERY LIGHTLY wipe diagonally across the lettering, removing just a bit each time, until the stuff is gone from the panel.

BTW the lettering on SX-28s is not white, it is more of a silvery gray.

My experience with lacquer sticks is repairing musical instruments (my main gig) mabe this will help:
I use a alcohol lamp to heat a filling knife and apply it hot.
Then level with a felt block and leveling fluid.
The flame must be carbon free so a alcohol lamp and remember the flame is faint to see.
..... so dont burn the house down.
It also take's practice

FOR AUCTION:

Hallicrafters' first entry into the production of televisions. 1948 model, looks great and plays even better. If you have ever dreamed of having a truly vintage and collectible Hallicrafters TV, this is the one. Completely electrically restored by a trained TV repairman with a lifetime of experience. New caps and resistors as needed, NOS tubes, new speaker and much more. This is a MUST SEE.
Good luck in the bidding!

I have had this radio for God knows how long and it is in good shape all around. The wife let me get a R8B which is on backorder. I am stepping back into LW and MW DX'ing. We have moved to a place where I was able to string a wire for 800' into our woods or the counties. This radio is available for auction but the winner has the option to pick up and try out. I have no problem shipping this Boatanchor as I have the proper shipping containers and packing material. If you have any questions E-Mail me it is a fine radio hate to see it go, it also has this factory addition I have not been able to ID. Someone said it is for FM I think it is for Video. If you know e-mail me.

I have some military speakers that are 600 ohm input. They are armored aluminum boxes with 8 ohm speakers and a 600 to 8 ohm audio transformer inside. These are water proof also. You can use them as 600 ohm input or open the case and remove the transformer and use them as 8 ohm speakers. Case size is 5" X 5" X 3" inches. Some are new, never used and some are used but check good. Will ship for $25 for a new speaker and $15 for a used/checked good speaker. This is the shipped price to CONUS 48 stated, no added cost involved. If intrested you can e-mail me and I can send a picture of the speaker. Also my web page is http://n4zou.homestead.com .

Dear Phil:
How you apply and remove the material is dependant on what material in
in the sticks.
I can think of four types off hand: true lacquer sticks, often called
burn-in sticks in the furniture restoration trade (very hard, must be
melted in and removed with special solvent, as mentionned by one other
respondant); a semi-soft resin wax stick (which can be pushed into
recesses after breaking off a small piece and kneading it between the
fingertips and placing with a small wooden stick, and is then struck
off with the edge of a popsicle stick diagonally to the incision, then

after it sets for a day or two any excess is lightly polished off with a soft rag or the fingertips); a quite hard resin stick often called Beaumontage (which is handled similar to the above, but must be softened by kneading for best results); a very soft wax stick like that used to fill nail holes on wall paneling which does not really work well since it has little "stickiness". If you can give some additional info, perhaps I can help further. Regards, Oldwood.

I just discovered a whole box full of BC-610 coils, that I had forgotten, in my old storage shed.

I'd have to count them, but I think there are maybe 8 to 12. At least two are in the original sealed boxes. I know that there is some duplication as well.

Any one interested?
make an offer??

This must be the kind that I have. It's quite soft -- about the consistency of children's modeling clay, or a tube of Chapstick. When you rub it into the lettering, some is left all over the surrounding surface.

This panel has a stamped "leatherette" texture all over, except for very small smooth places surrounding the lettering. So, when you wipe away excess, it's quite difficult to avoid getting it into the nearby wrinkles.

Dear Phil:
It would seem you should be looking for a different stick - a product by Mohawk Finishing Products called "Patchall Pencils" will probably be a good bet. Break off small portions, knead it well, and place it carefully with a small wooden stick in the area to be filled. This will minimize any overages which will have to be removed. Am I correct that you are in B.C.? If so, your Mohawk dealer is Mohawk Western Finishing Supplies on Marine Road in Vancouver. If I am incorrect, check for a good finisher's supply which will probably stock Mohawk or Behlen (same thing) products. Regards, Oldwood.

Another trick is to put the front panel on the stove to warm it up to 180 degrees F or so.
Then the lacquer-stick just melts and flows into the engravings. Any extra you can rub off
with a soft cloth and just a dab of mineral spirits (once the panel has cooled).

Just In!! (10) 6LF6 Amperex Holland power/sweep tubes. This is the largest lot of NOS I've seen in a long time, and these tubes are very scarce in any brand. If you need this tube type, don't pass these up! $44.50 ea. while they last (AES gets over $55 per the latest phone call).

I also have some other scarce BA tubes, check my site.

Thank you!

If you have the cylinder containing the VFO calibrated readout - the bands - and it is intact, I am interested. Please let me know. I have a TX-1, and the only thing that needs "fixing" is the part I mention.

Phil,

If you bought the Laquer Sticks from Antique Electronics Supply (we have used them on several SX-28 panels), go to the autobody/Revy/Canadian Tire store and get a small hard-plastic squeegee that's used with Bondo. Rub the laquer stick across the letters, wait a few minutes, and strike it off level with the surface using the squeegee. Works like a charm!

Walt

Hello All,

I have a very nice Radio Shack general coverage table top receiver for sale
. Receives AM, USB, LSB and CW on all bands thru 30MHZ. I have a very
accurate calibration chart that goes with it. It is missing the upper dial
red line pointer (available from RS.) it just snaps in. Nice little
receiver. Pix available on request. Get it before it goes to ebay.

Asking $60.00 plus shipping

Russ

It worked! I whittled the lacquer stick down to a medium point and used a slow circular motion to fill the letters. I let the lacquer set up for about 10 minutes, then scraped it off with a plastic tool, which removed most of the excess and left not too much in the surrounding wrinkles.

The plastic bondo scraper came from an auto supply store. I cut a thin piece whose end was about the width of two letters. After scraping the excess from all the lettering, I went back with Q-tips lightly moistened with turpentine to remove the excess from around the letters. Cleaning up took a LOT longer than applying the lacquer, but the results are pretty nice. Squeezing excess solvent from the Q-tip and twirling its end to a point made it easier to get the small spaces.

There is still a faint haze around the letters, but I figure that will polish off easily after I let everything dry overnight.

Thanks again for all the advice!

I'm looking to buy the following: NC-183D, NC-300/303, HQ-180, SX-100, SX101, 75-A2, 3s, or 4s; Johnson Rangers, Viking ll or Valiants. These need not be working as I'll be using them for parts. They should have transformers, tank coils, tuning condensers and rotary switches intact, however. The front panels and cases can be pretty scratched up, as long as they can be repainted. I live near Philadelphia so I would prefer pickup in southeastern Pa., south Jersey or northern Delaware.
Tks

<wb0poz@prodigy.net> wrote in message

> He said on rec.audio.tubes that he'd rather sell them to audiophiles than
> for boatanchors.... wonder why?

It's simple- there are some terrific audio amps that use 6LF6s (Futterman, some Counterpoint, and others), and while the boatanchor guys can rework their gear to sub 20LF6s and such, the typical audio guy isn't as technically
qualified, and most won't be able to do it. So if an audio guy needs these tubes, I'd rather see them go there than have somebody not be able to use their audio gear at all.

Also, the Amperex tubes are generally considered to be excellent performers in audio equipment. Not that radios don't need good tubes, but to most of the
hams I know, a tube is a tube. Not so to the audio guys. So if a ham needs these tubes I'll be happy to help him out, but I would like to see classic audio
gear stay in use. That's my passion - audio gear.

So that's why I'd like to see them used in audio gear. You seemed to imply there
was something sinister or dishonest about that. Of course, that does seem to be
your style - stand off at a distance and lob grenades in. Like the way you flamed
that guy on R.A.T. not long ago who asked for assistance fixing his tube amp.
I'm sure he was helped greatly by your insulting and condescending reply to his
request for help. Unfortunately we can't all be as smart as you are. Fortunately
he did receive help from other R.A.T. regulars, and solved his problem simply
and easily. Did you see his thank you post not long ago?

In taking my comment out of context you also (conveniently) neglected to point
out that the price was identical in all the posts at $44.50 per tube. You undoubtedly also know (since you know everything) that $44.50 is a competitive price, whether you search "audio" tube sites or "boatanchor" tube sites to compare. Especially with my policy of cheap or free shipping.

My apologies to any hams/boatanchor enthusiasts who were offended, no slight was intended. And to the original poster I want to say simply this:

Mind your own business.

That's what I'm using, all right.

Yeah, maybe I'm just being too impatient (when has *that* ever happened
before :-). I was trying to wipe off the excess right after rubbing it in
the letters.

I will try the squeegee trick and see if that works better.

>
> 73, Barry WA4VZQ
Your right Barry! I have found a replacment for L-505. It's mouser
part # 434-03-123J it is a 12 mH inductor. The tech manual parts list
lists it as uH and I will need to change that. It also said that the
resistance across it should be 90 ohms but after disconnecting L-502
and checking that information found it reads 40 ohms on 3 diffrent
multimeters I have in the shack. The mouser part lists there part as 24
ohms across the terminals. As there is a 2200 ohm resistor in line with
L-505 and is rated at plus or minus 10 percent I am not going to worry
about it very much.

Dear Stewart;
I use a product called "oil bar" which comes in all sorts of colors at a local Crafts & paint store.
Initially, I had the same problems but what I do now is to use an pieces of an old cotton Tee shirt but I wrap only about one layer of it over something thats flat & NOT soft so it will only rub across the very top of the surface and NOT flow into the engraving, thus removing the paint which are trying to leave there, Hi!
You will need to keep changing and moving the cloth around otherwise it will only "schmear" the removed paint around. A little patience and it works just fine. Works fine on those White lined knobs also, providing that the Engraving is deep enough, of course.
GL.....

Source record: 59721

Hi folks,
You may have seen it on another reflector, but I think it's suitable to spread the word here;
There's a new book, "A Family Affair" - The R.L. Drake Story, written by John Loughmiller, KB9AT, and just yesterday released for sale and immediate delivery. It's over 300 pages, a history of the company gleaned from personal interviews by John with present & prior employees, and a big appendix with technical info which is about 50/50 tube and TR-7 and runs about 150 pages. Much of the TR-7 info has not been published b4.

It's priced at $29.95 plus shipping and handling, direct from the author. Take a look at http://home.fuse.net/tsg/ for more info & ordering info.

I have no monetary connection with the book, tho' I did contribute a little technical info.
73,
Al, W8UT
New Bern, NC
BoatAnchors appreciated here
anchor@coastalnet.com or anchor@ec.rr.com
(both work now, coastalnet will go away soon)

Oh, I remember those -- back in the Seventies, I worked for a business
with a Wang.

Why don't you go on the web, and try various search engines with
"Wang" or "Wang Word Processor" word combinations. You might find
somebody or some group that collects these things, then again, maybe
not. The Wang was business oriented. Other older computers, the old
Tandy's and Commodores etecetera were more consumer oriented, and
there are more collectors of those, probably. I start by searching the
web for vintage computer clubs or groups. There are plenty of those.

to
> his
> request for help.

Which guy was that? I certainly flamed nobody, but did recently point out the hazards of blindly subbing tubes to get "better sound" to some poor slob who fried a new pair of KT-88s or something - is this the guy you're talking about? Let me tell you that I've helped *many, many* people here, on r.a.p+r, and r.a.t fix problems with their radios and never have I been condescending. Just because you disagreed with my answer does not mean that I did not offer him valid advice (backed up by 25 years of experience of repairing tube and solid state electronics - professionally and recreationally).

I will, however, point out questionable practices, snake oil, etc., as I sees 'em. I'm certianly *not* accusing you of same since I've never dealt with you; however, I just found it curious that someone would rather sell to audiophiles (who generally tend to be *much* less knowledgeable about electronics than those on this group) than to hams.

Believe it or not I somewhat share your views, as my experiences with selling stuff at hamfests indicate that audiophiles just fork over the money whereas hams tend to be some of the cheapest bastards on the face of the earth and will haggle over the last nickle.

> Unfortunately we can't all be as smart as you are.
> Fortunately
> he did receive help from other R.A.T. regulars, and solved his problem

Hey, Jim!
I am a collector/restorer and hate to see history go in the garbage.
Most of the stuff I save from the landfill I dont even make money on.
I found to may ham's are cheapest grouchy of farts who will seize *any*
chance to bitch and moan.
Without doubt the most nitpicking character's around.

I had one prick bitch and bad mouth me because I got balled up with all his
nit picking cheapest way's to ship.
I mis calculated shipping, tracking tag and insurance by a $1.60 on a
Heathkit HW-100.
Another wanted a $20 reduction on a $40 NOS Tandy DSP-40 with a missing
mobile bracket,
then wanted it on COD to California with the old "Hey check out my Ebay
with 200 positives"
Guess what, Now its all going on Ebay with a high reserve !

F#*K EM, dont apologize for or explain to *some* and I mean SOME of these
pricks.
"The good guys understood exactly what you meant"
Cheers, have a good one.

3689. BoatAnchor-- not radio, but computer-- question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-04 03:58:23 UTC
From: novatech@eskimo.com
Message-ID: <8u01gv$a6a$1@eskinews.eskimo.com>
Source record: 59725

This is a question about a non-radio boatanchor. I have a complete Wang 2200C-3 computer system. This was used by my father's surveying company for years. I am guessing that it might be worth something. It was suggested that I just put it on Ebay, but first I would like to ask if anyone has pointers to someone or some place that cares about these things.

This is not a PC, but rather an old fashioned micro-coded thing.

You can see some photos (not very high quality) at:

http://www.novatech-instr.com/Ebay_Images

all the files starting with "MVC" are of this computer.

Please send me in the right direction-- must be a Wang boatanchor collector somewhere. (Cleaning out my Father's estate).

TIA,

Steve.

Do yourself a favor and when shipping do not use UPS. They are the most expensive and the most incompetent delivery service available. They find it impossible to deliver even the simplest of package without damage and on time. You do not need the trouble this company will cause.

Funny- My experience has been quite the contrary- My biggest problems
have been Fedex (gets lost when not in the city) and RPS (sends Semi on
country roads with 2lb package)

Another problem is people posting stuff like this on multi-NG addresses,
not on subject- and probably just to get revenge after a dissagreement.

Strange. Over about 5 yrs or so, I've had at least 60 or 70 pkgs delivered and sent through UPS and only two problems. One was delivered two days late and the other was a minor damage problem . They had me fill out some forms and sent me a check for the insurance money within one week. They told me to keep the goods and they didn't even want to look at it. Couldn't ask for better service. Unfortunately, it is inconvenient for me to use UPS and I end up using USPS and with them, have never had a problem.

I agree. UPS' delivery time has been ridiculous lately. I have been
shipping with the Post Office Priority Mail for items less than 5 pounds
because it is a lot cheaper and quicker. Although, I believe UPS is
cheaper on the heavier stuff than the post office but it takes longer
for UPS to deliver.

3700. What is a SG-25 vs URM-25D

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-05 00:00:00 UTC
From: Rob Dunn <dunnr@ix.netcom.com>
Message-ID: <8u43v4$5e5$1@slb0.atl.mindspring.net>
Source record: 59617

Hi All,

Quick question for the group. I had a couple of boatanchor signal generators follow me home yesterday and am trying to figure out what I have. The first one had the following markings on it:

TRAD
Standard Signal Generator
Model SG-25 S/N 778
10 KC - 50 MC
Supply: 115V 1ph 50 to 1000 cps
Winslow Electronics Inc.
Ansbury Park, New Jersey

This SG-25 looks like a URM-25D and in fact the lid is apparently from a URN-25D as it has the 5:1 attenuator, the 10:1 attenuator, the antenna simulator and an impedance adapter along with a few jumpers included in the lid and all are marked URM-25D. A very old and faded set of thermal photocopy pages with URM-25D calibration procedures was also tucked in the lid.

My question is what is the difference between the URM-25D and the SG-25? I guess a second question is what is TRAD? It is in big red letters on the metal tag above all the other nomenclature. I have a HP-606B that I use now but one can never pass up a good piece of boatanchor gear.

I also have questions about a Hickok 156 "Traceometer", a General Radio 1001-A 5 KC - 50 MC Standard Signal Generator, and an Acton Type 310B Z-Angle Meter (Some Sort of Impedance Bridge) but haven't had much of a chance to look at them.

Thanks

Rob

Hi, I have 3 heathkits for sale, two are the HW-16 CW transceivers - 1 transmits okay the last time I used it and the other received okay, both in good condition but selling as parts (all there except manuals) plus a HR-10 receiver for parts - all units could be operational with a bit of diagnosis and work. Very good project radios. Price is $75 for all three plus shipping from Anchorage, Alaska. Prefer package deal and would not like to separate. Thanks in advance.

3712. Re: What is a SG-25 vs URM-25D

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-05 00:00:00 UTC
From: "Roger D. Johnson" <n1rj@pivot.net>
Message-ID: <3A05CA44.650D40F7@pivot.net>
Source record: 59629

Hi Rob...

Military nomenclature can be confusing! Basically, a AN/URM-25 designation indicates a complete group of equipment. It consists of the SG-25 signal generator plus a bunch of accessories that store in the cover. There are pads, dummy antenna, adapters, etc. Often these are missing.

73, Roger

3713. Military URM 25d

I have a URM 25D signal generator that need a attenuator and it is all apart
the
the attenuator that is . the generator is working and I just dont have the
time to
fix it anymore so it is for sale it does have the lid no adapters condition
is ok. 25 bucks and shipping from 92869 . It does work if you put the
attenuator back to gether . the attenuator is stuck or jamed so I am sure
you will need a new one. I heard Mike at Murphys surplus has new ones. you
might give him a call if interested.

Oh, come on Phil, you didn't really expect a message relating to anything electronic in a radio newsgroup, did you? Since this is a radio newsgroup, the message had to be about United Parcal. Gee, you need to get these newsgroups figured out. Electronics related stuff is discussed in the child birth newsgroup, and I haven't found where amateur radio related topics are discussed yet. If you come across it, let me know.

I have a Heathkit SB1000 amplifier I want to sell. It has a single 3-500Z which puts out about 800 watts CW or 1000 watts peak SSB. It covers 160-10 meters; although it does not have WARC band positions, it works fine on 17 and 12 meters (using the 15/10 meter bandswitch positions).

It has the following mods:

1) Plate RF choke replaced with AL80B choke to eliminate resonance on 17 meters.

2) Vacuum antenna relay system added for smooth, quiet, QSK or VOX. Electronic cathode bias control cuts off tubes in receive.

3) Step-start added to power supply to protect tube filaments and diodes.

The amp is set up for 230v, can be strapped for 115v. 8 out of 10 appearance. It was working fine when it was taken out of service 8 months ago. Manual included.

I am sorry, but I will NOT ship it -- there's too much danger of the power transformer breaking loose, and I don't feel like removing the transformer.

I would like to get $450 for it. I have two spare 3-500Z's, which I will sell for $50 each, WITH THE AMP only!

Pick up in Fresno California, or I will meet you from Bakersfield to Modesto.

73,
Vic, K2VCO
Fresno CA

>I do not have the production dates for the 5100B
>transmitter, as well as selling price. Ditto for the 51SB-B. Anyone know
>this info?

The 5100B was manufactured from 1955 thru 1961. It originally sold for $475 but the price increased to $525 by the end of production. The 51SB-B was manufactured from 1956 thru 1961 and sold for $265. The predecessor to the 5100B was the 5100. This model was manufactured during 1954 and 1955 and sold for $442.50. The 51SB-B replaced the 51SB which was manufactured from 1954 thru 1957. It sold for $279.50 and had a built in power supply. The 51SB-B took its power from the transmitter. Hope this helps.

>radio newsgroup, the message had to be about United Parcal.

Unless your next door neighbor is selling a boatanchor to you, you have to deal with shipping it dont you? Since they're old and heavy, they're called boatanchors. Shipping small light items isn't a problem for UPS. It's the boatanchors they break. You're not really that dumb are you?

When I lived up north it was easy to find a ground for my rigs through the plumbing pipes, etc. Here in Florida however, almost everything is PVC. Here's my plan: I intend to run transmission line into the house through the wall near the station location. There will be a lightening arrestor in the line from the mast mounted vertical. (ten meter vertical, about twenty feet high, I'm starting slow.) It will be adjacent to the transmission line entrance point, connected to an 8 or 9 ft. ground rod. From the ground buss in the shack, I intend to run a bare ground wire through the line access point out to be connected to the same ground rod used for the lightening arrestor.Any comments or suggestions will be appreciated.
Thanks and 73, Jim W2JBS

Being in Florida, the best advice I can add is to set things
up where you can readily DISCONNECT the antenna and and PULL
the ac power physically. Having a good ground is a mixed
blessing if a lightning surge comes in via the power. It'll
jump right thru your gear to get to that nice ground.
Oh, and pull ur telco/modem connection too when a storm is
in the area.

Thanks Bill,
I intend to house the arrestor fitting in an outside enclosure for access to disconnect when a storm is emminent, which is often enough here. Also, we have a drill to pull telephone lines, TV and other power cords at such times.
Vieques, eh? Keep your head down.
Thanks again and 73. Jim

Selling a Galaxy external VFO. It's in relatively good condition. The main knob has several blems and the outer case appears to have been painted. Otherwise, the front panel is in excellent condition, as is the smaller knob. Tested on my GT-550 and works fine. Better stability.
For $50 shipped Priorty mail to USA zipcode. Includes attachment cables.
For you Galaxy Ham Radio fans, I have some other items like a CW filter F-3, Xtal switch XO-550, 2 complete 550 tranceivers- if anyone is interested. 73, K4GJ

I have an HW100 gathering far too much dust.
It's not pretty anymore and it's missing some tubes,
but it did work before I stole some tubs from it.

I'll sell it real cheap if someone wants it for parts.

No power supply...have an HP 23B somewhere, but can't find it right now.

I do have an HP13 DC supply that I'd also sell for about the cost
of shipping it.

Email to w0bgp@valleycomm.net

Look in your dictionary for "anchor", without the "boat". There are many meanings for "anchor" but with reference to "boats" we usually are talking about the heavy metal object dropped into the water to hold the boat in place.

The term has taken on a meaning in ham radio since the 1950's, although now it seems to be applied to any large, heavy piece of electronics. Such electronic items usually contain vacuum tubes and lots of iron transformers.

I believe the term "boatanchor" originated in CQ magazine in the 1950's, in the part of the magazine devoted to converting World War II surplus electronic equipment to ham radio (and other) uses. Readers would often send in requests for assistance with the conversions. One such request pertained to a useless piece heavy metal electronic equipment that the reader bought with the hope of converting it into something useful. The editor who responded to this request suggested that the reader get about 50 feet of rope, tie it to the heavy electronic device, and use it to anchor his boat.

I still have the magazine, but it would probably take a few hours of skimming to find the particular issue. As I recall, there was a picture of the editor on a boat dock demonstrating how the conversion should be done.

Oh.....

I thought from the title that you were relating the fact that
if one overcharges the batteries in an Uninterruptable Power
Supply (commonly called a UPS) the UPS will not deliver as much
power as compared to properly charged and conditioned batteries.

Hello Group,
I have an AT-1 and Heath VFO that I was ready to toss into the trash. The units are complete, but have problems. The AT-1 meter is broken, and the wafer switch is/was replaced. All tubes/coils are there, though.
I don't want to fix it up. It's going in the trash in a week, unless someones gets it from me. Give me $20 for both.
I live in the metro twin cities area of MN. I don't want to ship it.

Regards,
Marc

>I 2nd that. UPS will tear the hell out of stuff. I only ship via post
>office now a days.

I worked for the Post Office one summer back in my college days. We sorted packages by chunking, throwing -- hurling them to the proper canvas basket. I suspect this happens with all shipping services.

I've always had good luck with UPS, personally. Same for Fed Ex and the Post Office.

Your best bet is to simply double-pack everything carefully and tape the hell out of the package.

Robert,
Since the 6SG7 is an octal tube and the 6EH7 is a 9-pin miniature,
how did they do the mod? Was the octal socket removed and a miniature
socket put in its place, or did somebody wire up an adapter?

The 6EH7 is a 60s-vintage TV IF-amp tube and is considerably "hotter"
than the 6SG7, although the extra transconductance won't necessarily
improve things. It would seem unlikely that the tube mod would result
in one band position being dead, so I'd suspect something else is the
matter. The SX-99 is single-conversion throughout its tuning range,
so it's probably a bandswitch problem -- or you might try another
6SA7 converter tube in case yours is weak at the high end.

As for the diagram of the conversion, it's probably just a pin-for-pin
replacement. You can lookup the pinouts and specs of the two tubes
online at http://hereford.ampr.org/cgi-bin/tube .

Yes I remember that picture and article and as I recall it was with a Model 19 MKIII transmitter/receiver. The problem was that the Model 19 was way ahead of it's time and it would transmit and receive on the same frequency. Back then almost all of us that could afford surplus would hack it up anyway but we were typically using CW or AM and call CQ on one crystal controlled frequency and tune the band for a response. The Model 19 did not lend itself to that operation being essentially a transceiver so it was considered useless at the time (at least that is what I surmise). I have one I use from time to time which is totally unmodified and works great in today's environment. 73 - Mike

Hello Jim:

My advise to you is make sure you connect you grounding system to the main electrical service panel ground as per the National Electrical Code. In addition, use multiple points (several ground rods) all connected in series with your station ground which ultimately connects to your electrical service panel ground as well. My QTH is subject to lightning hits (Ive lost computers, tv's, well pumps, electric g-door openers and the like) and this is the only system Ive found that minimizes damage. Of course, nothing can stop damage from a direct lightning hit however one can try to prevent the resulting damage. Also try visiting www.polyphaser.com and look up the essay on "Multiple Point Grounds".

I hope this helps.

More specifically, USN items made during the war effort often carried the "anchor" symbol on the manufacturing label which was sympolizing property of the U.S. Navy. This is where the term "boat-anchor" was originally coined and, as I have been told many times by veterans of the war, it was a term in use by signal men during the war who had to service and work with these hefty beasts. I.e., hams are far from the first to complain about the weight and what else they could be used for :-). Hope this helps the story.

>
>

Hi Richard;
That's amazing because i've shipped with UPS over 2K times with only about 5
damaged cartons, and they were covered by insurance and only took 2-weeks
total to receive payment!
I have used US Priority also with no problems.
They both have had a few problems with tardy deliveries but only a very few.
This problem that you mention might be a localized condition in certain areas.
I Have tried them all and UPS is the cheapest and best for the heavy items
providing you pack the stuff correctly.

Hi,

For some odd reason all the dust, grime and cigarette smoke that my boatanchors were exposed to, over their long lives, seems to end up stuck on the plates of various tuning caps.

Anyone got a good method to clean them up, especially without removal from the chassis!

Any advice will be appreciated.

Hi
Old problem. My solution was to carefully remove them and douse them liberally with rubbing alcohol. Then carefully put them back.
To do this without the removal requires more care, and lots of paper towels underneath to catch excess.
It really works, but of course, it's a messy job.
Maybe someone on the NG has a better way???

FS:CUSHCRAFT R7000 HF VERTICAL ANTENNA

Cushcraft 10, 12, 15, 17, 20, 30, 40 Meters HF antenna with
manual. Complete and in Good shape. Works great dx. This is a half wave
on
all above bands. 5 yrs old. Rated at 1500 watts. Has never had more than

100 watts run through it. Can roof mount etc. Has it's own radial system

built in with a small footprint. Already assembled, I broke it down into
3
sections for transport. Marked the joints with a felt marker for easy
setup.
This is a very GOOD antenna. I have too many overhead power lines to
safely
set up here at my home. Antenna is 24 ft. long.
Price is: $150.00 firm. Buyer must pick up in Escondido, Ca., North San
Diego
County. Sorry...I will not ship. Feel free to email any questions to me:

John Williams at ac6ts@n2.net or ac6ts@amsat.org

Thank you for reading.

3817. Re: Aging boat anchor owners and widows to be

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-08 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <3a0a19cc_2@news3.calweb.com>
Source record: 59404

Hi Gary and the honored group

I was pondering the question of my 40 years of electronic scrap collecting just the other day as I was also contemplating my upcoming birthday which will put me within a year of 60. A process I cannot stop although one that I, like many other mortals, seem to dread. But on the other hand the collecting of our beloved junk whether we use it or not serves many purposes (none of which come to mind at the moment). Beyond completely purging ourselves of our toys as we prepare for the old folks home, we should at least tag our junk so that whoever is forced to dispose of it will have some idea of its value both monetarily and historically. Very few of us want to take the time to do an extensive inventory of the junk and in fact there is no real need for that. Those of us hams who collect the junk by now have some idea as to its worth given the internet, newsgroups, and perhaps even the often scorned Ebay venue.

Here is my proposal:

How about buying a bunch of colored sticky circle labels that conform to the RMA color code. That's right! Black $0.0, Brown ($100), Red ($200) Orange ($300), Yellow ($400), Green ($500), Blue ($600), Violet ($700), Gray ($800), White ($900) if it's more than 900 dollars you should have sold it before your key went silent.

Each color could equal the minimum value of the unit with black as the starting point. The tolerance color Gold could be used to indicate that the item has historical or sentimental value. For example A black label and a gold label would, on an old meter would indicate a value of zip, but due to its age, it shoule be saved it from the heap, put into the "give away box." The Silver label could be used as a method to rate an item between zip and 100 dollars (Silver Green=$50) Keep it as simple as possible and make damn sure all family members have a copy of the color code. What I like about this system is that it's quite visual, not complicated, requires no records other than the color code scheme, easy to update if for some reason the bottom drops out of the SX-88 market and you have to change the colors or the inverse if the market goes even more nuts and you feel inclined to adjust your junk's value accordingly.

Just a thought.

> I was pondering the question of my 40 years of electronic scrap

Pretty clever idea, but I guess ya better figure out a big
dot where you can write all the instructions down. And
there's gonna be somebody cussing ya after you're gone if
these things leave a spot on the paint or don't peel off
easily. If they do peel easily, they won't last long
anyway. I used some of the colored dots on some equipment
for a different reason...within a year or two they had all
fallen off.
Since ya gotta write up instructions anyway, you might as
well make an inventory list of at least the major items, and
maybe go as far as incorporating that into a will if you
want to keep the kin from scrapping over the pickins.

3820. Re: Replacement Cloth-Covered Line Cord??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-08 00:00:00 UTC
From: Leith Jennings <leejen@paradise.net.nz>
Message-ID: <973675220.345086@shelley.paradise.net.nz>
Source record: 59522

Try a shop that repairs houshold irons. They will have line cords complete
with the plug on the end. You will also find that the flex will be asbestos
insulated but that's not a problem. It will look correct!

73
Lee ZL2AL - ZL7AA, ZL8RI, ZL9CI, VE3OE

If you want finite limits - Try WAS or WAZ.
If you want a challenge - Try DXCC.
The wall starts around 300!

3821. For Sale: Hallicrafters SX28.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-08 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <20001108062958.16000.00000791@ng-fi1.aol.com>
Source record: 59523

I have a Hallicrafters SX28 for sale. It is all original and complete, NO modifications have been made to this set. All of the knobs and switches (bells and whistles) are there and original. The only problem that I am aware of is that the bandspread dial cord is broken. This set has not been powered up for many years and should be brought up on a Variac. This set is in need of restoration, has some surface rust on some chassis components. I have several photos of the set for interested buyers. I am selling it because I have an SX28A and will never get around to bringing this receiver up to its full potential. Once again, this is an SX28, not the later SX28A. I am asking $250.00 plus shipping from the 07860 zip code. Please respond directly to: nc183d@aol.com if interested.
rgds,
Mark S.

3832. CQ Magazine boatanchor reference

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-08 00:00:00 UTC
From: Roger Leone <arleone@inreach.com>
Message-ID: <_IeO5.235$9U1.11292@news.inreach.com>
Source record: 59534

To all those who expressed interest in the CQ magazine reference to boatanchors, I found it after only an hour or two of skimming. And I also found that some of my recollections were a bit hazy after all those years.

The original letter to the editor (not to the "Surplus Editor" as I incorrectly recalled) appeared on page 16 of the October 1956 issue of CQ and was as follows:

Gentlemen:
I recently acquired a "Signal Corps Wireless Set. No. 19 MK II Transceiver." Are there schematics or conversion data for this rig? Any info will be appreciated.

David J. Wilke W3LSG
Pottstown, Pennsylvania

The editor replied:

The only conversion we seem to have on the files here at CQ calls for 100 feet of 1" Manila line, one end of which is to be tied securely around the MK II Transceiver. This then converts the unit into a fine anchor for a small boat. If any readers have better conversions we will be glad to hear about them.

Ed.

This letter apparently generated a lot of interest and in the February 1957 issue of CQ there was a follow-up from CQ's editor, another letter from W3LSG and several pictures.

If I find the time I will scan them and post links to them here.

The expression "boatanchor" may have originated earlier than 1956, as Doug Hensley pointed out. I found no earlier references in amateur radio than these CQ's, but there may be some. However, there was no reason to call amateur gear of that era "boatanchors" since almost all of it fit that description. It wasn't till later when smaller, lighter gear became popular that there was reason to categorize some gear as boatanchors. And it is also interesting to me that a word originally used to denote something of little value, useful only to anchor a small boat, has taken on a more affectionate meaning. We love our "boatanchors".

I remember that article, although my copy of the mag has long gone. The term boatanchor has an older history than radio. In the shipyards back in the UK, when they launch a ship, they use heavy chains tied to whatever "boatanchor" they could find, It was usually something heavy, old and of no known further use. The purpose was to slow the speed of the vessel as it slid faster & faster into the water.
Of course, If they found an old clunker of a radio, they just might have used it!!!

Sounds like a personal problem. Need to check in at a health spa so that you stay in shape. I know people in their 80 that move mountains everyday but have been doing everyday of there lives and then there are others that can hardly lift the bear bottle to their mouth. Of course there are those that do really have bad health and boatanchors are totally out of the question. I am 52 and have been a ham for 36 years and boatanchors will be in my life for many more.

If you think they are to heavy sell them and get something smaller there will be buyers for boatanchors for a long time to come but I would expect that their price might come down a little as we all get older.

Ron

I have had good success with a pre-amplified mic such as the D-104
ceramic. If you use the crystal it will be higher pitched. Which may
be what you want.

I am presently using the Astatic 10-D4 head on the pre-amp stand.
Seems to work just fine. (This is the bullet head design).

It requires a high impedence mic, BTW.

I feel your pain. I am only 62, but have a modest collection of vacuum tube gear. My concern was what would happen to it when I passed on. I've seen the feeding frenzy at a couple of hamfests when an "estate" from a silent key was brought in. I can't bear the thought of this, or even worse, to have my beloved SX-28 end up in a dumpster or on E-bay as just a commodity to sit in someone's collection. This stuff needs to be used to be appreciated.

My solution was to find a young ham who expressed an interest in what has gone before, and who promised to cherish the rigs as much as I have. To him I have left most of my gear. I hope it works out.

> "bigger, heavier" and "the heaviest receiver yet". Bulk was associated with
> stability.

Well, when it comes to that claim...
Bulk is one thing - but weight counts as well. Never seen it myself, but
I heard several stories about latter days Philips electronics, say round
the seventies, that had small sandbags inside. Silicon as in the way one
finds it on beaches. Just to give the customer the idea he/she was
really buying good stuff...

Being Dutch myself I should not slight one of our national prides, but
the story is too good not to tell. I'd love to actually see one of those
jobs!

Wammes - weight helps - Witkop

3846. FS: new roller inductor

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-08 01:16:01 UTC
From: k9sqg@aol.com
Message-ID: <20001107201601.18625.00000342@ng-fk1.aol.com>
Source record: 59515

Circumstances make available a roller inductor listed previously. It is brand new, edgewound, silver plated, 24 uH, 20 Amps, 3 KW ++. Sells for $240 at Surplus Sales of Nebraska. Has a shaft at both ends. Double wiper so there are no "skips" causing the swr meter to spike while the inductor is being rotated. Has a geared potentiometer for a position indicator if you remote tune the coil. Has an end of rotation limit switch if you choose to remote control the coil. Price is $75 plus UPS, will not ship overseas.

Thanks for reading the posting.

73s,

Evan

Doug,

I've never thoght that Boatanchor has such a profound meaning.
Could I find them with anchor mark in the web?

By the way, I told those who are responsible to maintain a dictionary
on-line that they should add the word.

3852. Replacement Cloth-Covered Line Cord??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-08 06:07:14 UTC
From: Sandy Gerli <angerli@home.com>
Message-ID: <3A08ED8C.88C893@home.com>
Source record: 59521

Hi, folks,

REstoring several older receivers, and I'd like to find about 50
feet of recent-manufacture, cloth-covered line cord with 18ga
wires. Would really like a brown "tweed" cloth covering, but
either plain brown or black would do.

Anybody know of a source?

73,

From: Doug_Hensley@GENERALHEALTH.ORG
Message-ID: <00087B15.C22279@GENERALHEALTH.ORG>
Source record: 59416

Good morning everyone,

If anyone has any Jones plugs in a box and can assist, please contact me:
(or know where to get these, just advise)

To construct the cable between an old power supply and its unit, and keep
the installation original, I need a male and female jones plug with this
pattern:

```
-- -- -- -- --

o o

-- -- -- -- --
```

Not a perfect drawing, but it is close. The pins are 1/4" wide, 5 to a row.
The rows are separated by about 5/8 - 3/4", whatever was the standard.
There are two 1/8" indexing posts as shown. Set your brouser to
"Courier New" font for most accurate view of locating pins.

Thanks in advance for any leads.

D.H.

YUP - that or something similar should do the job - we've all heard the stories about the unknowing widow who disposed of her ham husband's stuff for pennies on the dollar - or the guy who bought that 75A4 and KWS1 in perfect condition for $50... Not very fair to the widow, who MAY have been in desperate financial need at the time...

BUT, my gripe was aimed more at the guys with virtual WAREHOUSES of old ham gear lining shelves that stretch for several hundred feet - more stuff than Henry Radio used to display in their stores... What do they DO with the stuff? Why, they BRAG about it on the ham bands - in between pondering about the "lack of AM activity" on the bands.... YEAH, I know, it's their stuff to do with as they please...

Jack, I once owned an Alda 103, nice rig.. mine also used the RIT on xmtr and rcvr at same time. I figure there must have been a recommended change in its earlier life.. the rig drifted pretty bad , the main tuning was critical ,by using dual RIT you should be able to keep both rec and xmtr on frequency better and have a fine tune control to do that. good luck Harold W4PQW

OK. here it is again.

Two restorable Hammarlund BC-779/SP-400 WWII super-pro receivers. With Power supplies, most tubes, Cruddy, but certainly restorable. One has original Knobs, the other one has what looks like National metal skirted knobs. They are in Sacramento and I will bring them into my work for pickup. Other than setting up a time for the pickup, I will NOT answer any more questions. They were given to me some time back and I do not have the time to putter with them. So for those boat anchor fans out there who do not yet have an old Hammarlund in their shack, here is your chance to have one. Remember, one receiver and power supply to a request, No cherry picking. Hey! They're free! No phone calls either. Hey! they're free.

A corresponding problem to all the above, is the tendency for so many of us "old farts" to collect FAR more old boatanchors than we could EVER use - then moan loudly at the lack of old gear to be heard in operation on the bands... HELL GUYS, there just MIGHT be more of the old stuff in evidence on the bands if YOU would stop HOARDING the stuff, keeping others from being able to appreciate and get actual USE out of it, insted of just gathering dust on some shelf so you can *look* at it occasionally...

As this continues, interest, availability and actual USE of that fine old stuff will die nearly out as fast as their owners kick the bucket... Why not keep a few of the pieces you especially value, and pass some of the stuff off to others looking for something of their own from those happy golden (glowing!) years of the past...

3873. Help Trouble info on an ALDA 103 xcvr

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-09 04:00:36 UTC
From: 31mike@my-deja.com
Message-ID: <8ud7h2$u00$1@nnrp1.deja.com>
Source record: 59408
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have a question for the group.

I have been working on an old ALDA 103 Ham tranceiver. It works
just fine except the RIT is on all the time no matter which position the
on/off RIT switch is in.
I have verified that the switch itself is good and not broken.
The manual refers that when the switch is operated it grounds one
of a pair of diodes and causes the RIT capacitor to go in or out of the
vfo circuit and visa versa. The two diodes that it refers to are D601
and D602. I can not find these in the schematics (for the vfo board) or
other associated circuits and schematics.
When I physically look at the vfo board itself it appears that
there is a small reed relay on the board and when this switch is
operated this relay is operated to switch the RIT cap in and out? visa
versa.
Is it possible that there was a mod to this transceiver to add this
relay and not use diodes? Or were the reed relays first and they removed
them and added the diodes?? It would be nice to get this guy running
properly.
Thanks for any trouble shooting suggestions or pointing me in the
right direction.

Jack

Any help is appreciated.

3875. Johnson Ranger Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-09 05:27:33 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <9BqO5.110586$i5.8322@news2.mts.net>
Source record: 59410

I own two Johnson Rangers, both of which have been totally restored and operate perfectly. However, one of the units has always had a problem which concerns me. The problem is arcing at the "OPERATE" switch whenever one is going in or coming out of the "PHONE" and "CW" positions - in other words, whenever B+ voltage is applied to the tubes.

This "spitting", which can be heard (and seen when it is dark), always occurred with the one Ranger, even after it was totally restored. However, the other unit is and always has been absolutely void of this problem. Both units have the CW Keyer board and PTT modifications - and are identical, as best I can tell, in every way.

Does anyone have anything to suggest with respect to the cause of this arcing and what might be done to extinguish it?

Being that you are not responding to me anymore I have to assume you are not going to go through with our deal. I expect that someone gave you a higher bid after you told me it was mine and even asked me for my address.

This is the one reason I hate trying to make deals on the newsgroups. Very few people will stand behind there word when more money comes their way.

3888. BC779 For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-10 00:55:05 UTC
From: Marc Hildebrant <hildebrantfamily@worldnet.att.net>
Message-ID: <JHHO5.6041$%%1.391240@bgtnsc05-news.ops.worldnet.att.net>
Source record: 59431

BC779(WW2 Super Pro 200X) for sale. Very good condition. No mods, with original moisture/fungus spray. Radio works and is complete with a manual from 1947. The radio was built in 1943.
The radio works and was recently aligned.

Minor blemishes:
1. Power Supply front painted Black
2. Shaft on XTAL Phasing control broke, and repaired.
3. Detent on CW/AM switch weak.
4. Power harness insulation brittle.

Radio is in the metro area of the Twin Cities in MN. With the weight at 100 lbs, I would prefer local pickup.

I'm looking for $160. Also, I have a real nice equipment rack that it's in that I'll sell for $25.

Marc

As an antique radio collector, with a few SX42 and SX28 sets thrown in for
good measure,
I must comment on your statements.

When tube technology was on the way out, you couldn't give these "precious"
boatanchors
away. Thanks to those who DID hoard the equipment, many thousands of sets
have probably
been saved from the dumpster or from rotting away in cellars. Both of my
SX28s came from
garages and cellars, and neither was something anyone would want to own,
let alone use.

Most of my sets are displayed and are seldom played... But, they are
displayed on shelves,
dusted, and kept polished, in an climatized controlled room. They are
kept warm in the
winter, and cool and dry in the summer. Maybe I am doing a "diservice" to
someone like you
who feels they are more deserving of the set than some collector. But,
where were you guys when
the set was offered for sale, when the radios needed many, many hours of
restoration and
repairs to bring them back to new condition; let alone the 100 dollar
packing and shipping
charges for sending one of these beasts cross-country?

Peter, K1ZJH

3902. Vacuum Variables FS High Current

3911. FA: Tube Checker/Continuity Tester - eBay

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-11 00:00:00 UTC
From: arcaxis@aol.comjunkbloc
Message-ID: <20001111080130.27801.00000664@ng-cv1.aol.com>
Source record: 59478

This is a Tube Checker that checks continuity of a tubes filament. If the filament is open the Tube Checker lamp will not light and the tube will not work. If the filament is good the lamp will light - simple. It will check most common tubes used in guitar amplifiers (12AX7's, 6L6's, 5U4's, 5Y3's, 5881's.....) tube radios, old phonographs, and if you're unfortunate enough to still have a tube type television, it will do those as well. This little Tube Checker also has a set of attached test leads that can be used to check circuit continuity. A guitarist/musician may find this feature a handy addition to the gig bag for checking guitar or audio cables, fuses, etc.

3912. RADIO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-11 00:00:00 UTC
From: Kenneth McKenzie <tennek@home.com>
Message-ID: <JkcP5.607217$8u4.8810700@news1.rdc1.bc.home.com>
Source record: 59479

Thomas Edison describes in his patent application for the wireless telegraph in May of 1885 as follows;
For receiving signals I locate in said circuit between condensing surface and the ground a diaphragm sounder which is preferably one of my electro motograph telephone receivers.

The first wireless telegraph picked up the telegraph signals with a loud speaking telephone. De Forest patented his triode in 1907 twenty two years later. For his first radio he used an Edison loud speaking telephone.

Edison's Patent and an essay about wireless transmission can be seen on my site at www.geocities.com/starapex Click on the radio

Cheers
Ken McKenzie

Unfortunately it also contains silicone oils. If you ever expect to
repaint in the future, avoid silicone oils and waxes.

I have two of the transmitters, one of the receivers for sale, and two a/c power suplies (MS4, I think). I have at least one copy of the manuals, and almost a complete set of replacement tubes, including a matched pair of finals bought from Drake way way back.

One of the transmitters was modified by a previous owner to put a fan on the amplifier compartment (and made substantial noise), and I modified it back to without the fan. Some of the knobs have been changed (from the original Drake "slot" knobs to cylindrical knobs).

I used to run this equipment back 15 years ago before the wife and I moved into a development where we had antena restrictions (Its hard to find places where you don't these days, even out in the country all lots that are for sale in subdivisions have been coming with increasingly restrictive provisions [the country is not "free" anymore!]). We are in the process of finishing a retirement home now and I'm realizing I don't really have room for this equipment. I have not tested the gear since it went mostly out of service back 15 years ago but at the time it was working on most if not all the bands; I have used the rubber pensil eraser trick on the rotary switches and usually everything comes back to being just fine. There is only a tinge of rust/corrosion anywhere; otherwise a teeny bit of dust, but otherwise no dings, dents, etc. There are SO-239s on a couple of the units, I'll look for specific details if you ask. Can't say about the electrolytics which I'm told go downhill slowly. Last time I looked and if my memory serves me, there were no cracks in the rubber insulation on the power cables.

I'm negotiable on the price.

You'll get a faster answer if you email to me your interests (I don't check the newsgroup very often and the messages on my ISP have been expiring sooner recently so I could miss a response posted on the NG)

Mario - unless you are concerned for some reason with "authenticity", dump the 4H4 and use an old 6V6 instead. The 4H4 was meant to adjust for fluctuations in line current - a problem in the 50-'s but not a problem now. Even so, its response was MUCH too slow. National published a service bulletin in the 60s suggesting the 6V6 sub. Have done so in my SX-88 and my HRO-60 with no problems whatsoever.

Bill:
There are 4 terminals. One will probably measure open to the other three. There is a 1% chance it will measure short instead. That is the pulse contact which moves the pointer. The other three are a split-phase motor winding, and will reflect a few dozen ohms. The center will measure approximately the same resistance to the other two. Apply 28 volts AC from the center to one end of the winding directly, and through a 85 MFD, 100VAC non-polar capacitor to the other end. The motor should run, and the open contact close to the common about once per second. Swapping the direct and capacitor connections should reverse the motor. There are mechanical stops, so be sure it is not jammed if it doesn't run at first. Perhaps someone with a better index will provide a URL with the schematic.

Source record: 59361

This is the latest version of the Drake TR-4 series of rigs. Includes the hard to find noise blanker. Also included is AC-4 power supply and MS-4 speaker. Front panels are beautiful. Transciever has a serial number above 44K, power supply above 60K. Tried it on 40 SSB, almost the only operating I do, and got good audio reports. $500 plus shipping via UPS. Cannot ship outside continental US. Thanks for reading the posting.

73s,

Evan

3983. vacuum tube rectifier solid state equivalents

Newsgroup: rec.radio.amateur.boatanchors

From: scpmiller@aol.com
Message-ID: <20001112024500.02448.00001115@ng-fo1.aol.com>
Source record: 59362

I have been given several solid state replacements for vacuum tube rectifiers but have no data to determine exactly which rectifiers they replace. Some are octal socketed, 4 pin based and even some which are in fact labeled as being for a 6X4. Does anyone have cross-reference data for these things? Thanks in advance!

From: David Nyberg <eng4hire@gci.net>
Message-ID: <3A0FEF39.53325448@gci.net>
Source record: 59295

I had a piece of test equipment given to me. It seems to work but I have no clue what it is, what it does or how to use it. Best guess is its a BIG data/logic analyzer of some kind. Made by LORAL Instrumentaion Model# d/pad mark II. Wish I could find someone who knew what this is before I rip to pieces for scap parts! Lots of BNC connectors on the back labeled analog out CH 1-12 above several DB25 connectors. Green CRT for display works well! Front telephone looking keypad for input below tape drive for storage. No date stamps that I can see but it was decommisioned late 70's early 80's. Thing weighs a ton! Lots of circuit cards plugged in it with mass TTL logic on the boards. Z8080 based. The last three boards have 4 ea. Analog Devices 12 bit D/A converter IC's on them (hence the 12 BNC connectors on the back that say ANALOG OUT 1-12)

I can send pictures of the face and inside or capture shots of the screens if you want to see more.

HELP!

Dean,

You can use the schematic for the IM-18 for troubleshooting. The meters were electrically identical, just placed in different cases with a larger meter movement in the IM-25.

Hello folks...just been offered a Yaesu FT200 at what seems like a reasonable price (£40). I would appreciate any info on the set, especially if anyone could supply a copy of the manual for the unit I would be especially greatful!
It came with a mic but with no plug attached so any info on the wiring of the mic to whatever plug is also needed.
I am hoping to use the set as my entry into Ham radio here in Scotland and would look forward to contacting helpful parties with the set when its up and running...Thanks in advance!

Hi All,
I now have good copies of the National RDF66 (radio direction finder) available for free. This accessory was for use with the NC66 portable receiver and was basically for marine use. If you have an NC66 and/or an RDF, you may just want one of these copies. It is all of 6 pages long, but explains how to use the unit and has a simple schematic diagram. As with all of my copies, this is free of charge. If interested, please contact me directly at: nc183d@aol.com
rgds,
Mark S.

As a young ham, let me say that this is a wonderful idea. It has been one of my greatest joys since becoming a ham to get to know some of the guys that have been doing this stuff since before I was born. I am a member of a small East Texas club, and I was afraid at the beginning that I was going to be pretty well on my own when it came to learning the ins and outs of ham radio, but there have been two members of the club that have gone above and beyond the call of duty. They have 'taken me under their wing' as it were, and gone out of their way to make me feel like a part of the collective ham radio family. The older of the two, Bill, just happened to have a 'spare' hf rig that he never used anymore. I was 'lucky' enough to find out about the rig just a few weeks before I got my General class ticket. We talked, agreed on a price (all he wanted was enough to put some more ram and a webcam on his computer), and I had a new radio (I did the work on his computer). I have seen this same model radio listed on newsgroups and want ads for more than twice what I paid him for it. To top it all off, he 'threw in' several mobile antennas and almost 200 feet of RG-8 coax. So, sir, I applaud you for doing something that will not only help keep our hobby alive, but will help someone just starting out. That is what being a ham is all about... brotherhood. Thank you for brightening my day.

Well thank you, and I'm glad you found a couple of "Elmers" to help you. Needless to say, I went through the same thing in the mid 1950's, when I first got interested. Two local guys took me under their wing, let me sit with them while they operated, helped me put my first station together, and one even gave me my Novice and Tech exam.

I'd also have to give credit to my High School Radio Club, which a few years later, taught me more about comraderie. We had a reunion last year, and I saw some people I hadn't seen in 43 years. It was a real blast. Some of them still had the same gear!

So enjoy the fellowship. Get into some public service activities like ARES or RACES. Go to a Field Day. There's nothing quite like it.

73,

Doug Moore KB9TMY (Formerly K6HWY)

Hi All,
I need to know where I can buy a bulk supply of #47 bayonet type pilot bulbs. I have a growing family of Nationals that use these and I don't want to buy them 5 at a time from Radio Shack. I would like the name/email address of a supplier that has them in bulk lots of, say 50. Any leads would be greatly appreciated... Please reply directly to: nc183d@aol.com

Source record: 59339

I think I remember seeing them in the All Electronics catalog, but not real cheap. Incandescent lamps of all sizes keep going up in price. Remember you can also use #1847 long life, and #755 really long life, both the same ratings, as well as #130, and #51, round bulb, the 51 is slightly dimmer (7.5V), if any of these show up cheaper. I'm waiting for the white LED bulb technology to mature myself.

I wasn't trying to be snippy, John, and your response seems
to indicate that you felt so. The tubes are available and I
can't imagine any reason to 'personalize' a KWM2A that
already has problems unless you're experimenting or
something. As for direct equivalents, I don't know of any.
Regards,
Bill WX4A

" As for direct equivalents, I don't know of any. "

Thanks, that question was just for a possible "Plan B".
I'm told that apparently good 6AZ8s can in fact give trouble with ALC
so I guess I'll try that first.

Message-ID: <PLxQ5.3291$pw2.310466@typhoon.mn.mediaone.net>
Source record: 59263

I've found UPS to be rough on heavy things.

I think this is because their people are reluctant to strain their backs
when unloading heavy packages.

They probably would rather drop your package off the back of the
delivery truck, rather than risk hurting their back.

If you ship UPS, you should assume your package is going to be
dropped at least 3 feet, once or twice.

Pack accordingly.

With boatanchors especially, you need at least 3 inches of crush-room on all
sides.

Hello All !

I have a Yaesu Ft101e with speech processor, AM filter, xtals for 160 thru 10 -- plus 17 meters !!!!!!
Also have the SPECTRONICS DIGITAL READOUT and the FT650B 6 meter transverter . Copies of all manuals AND the FT101E FACTORY SERVICE MANUAL. Some FOX TANGO articles. No manual for the readout (IT works great -- I like it better than the FC601 - it has the built in sideband offset) I do not wish to break the rig it up !!! It is in very good condition and EVERYTHING works fine. Make an offer before it goes to e-bay.

Russ

Source record: 59276

You might wanna look at the TX audio chain.

Keep in mind that the KWM-2 makes "CW" by injecting a tone from the Wein bridge oscillator. Feeds it into the first mic amp then to the second mic amp. The second mic amp is then grid block keyed.

(If I remember correctly....)

But then... if you can't zero the ALC......you may be right.
I'll have to look at my print when I get home....

FS: I have a second (backup) Johnson Viking II and 122 matching VFO
that I have decided needs a new
home. I sold my first one that I listed about a month ago. This
particular one looks nice on the front panel
also and includes a manual. This one hasn't been on since 1993 but
was working when last on. I want $250
for it. If interested call Mike at (979) 693-1461. By the way, I
sold the last one the same day I listed it and
sold it because the guy called me on the phone for the details and
then took it. Everyone else was waiting
for a reply via e-mail. I check my e-mail pretty regularly but the
phone gets it every time......

Date: 2000-11-15 00:00:00 UTC
From: yardleyite@aol.com
Message-ID: <20001115180740.16560.00001821@ng-bd1.aol.com>
Source record: 59278

Hello and thanks for reading my listing. I have a Yaesu FL-2100-F amp that is in excellent condition. It uses 2 ea. 572-B tubes which are plentiful and inexpensive.
Power output is about 500-600 on 15 meters and about 700 or so on 80. This amp does not have the 10 meter modification installed.
It has the original plastic on the front panel and it's original shipping box/manual.

I'm asking $350.00 plus shipping.

I have an ITT/Mackay 3031A HF receiver for sale.
It covers .015 - 30 Mhz and has a built in preselector.

Modes are USB, RTTY, AM, CW Fixed, CW Var and CW Preset.
Since it was meant for the maritime industry, it does not have the
LSB mode, but LSB may be tuned in via the CW Var mode.

IF bandwidths include 0.4, 1.0, 2.0 and 8.0 khz.

Unit is in very good shape and includes the operation/service manual.

Price is $800 plus shipping from zip 07737.

Thanks,

Mike N2MS

From: pspercy@my-deja.com
Message-ID: <8ussi0$6lh$1@nnrp1.deja.com>
Source record: 59247

Anyone know if there's a direct replacement for tube types 6AZ8 and
6BN8 ?

I'm trying to resurrect a KWM2A, suspect ALC problem(s).
Symptoms:

Receive: OK.
Transmit: TUNE, OK, 100w out; All other modes (LSB, USB, CW), zero
output, ALC meter reading at full scale+.

Any ideas welcome. I have already trawled the Collins "List" archive.

Tnx,73

Hi,
These appeared in mid/late 60s. First sold in UK as "Sommerkamp FT200"
and in US under TEMPO brand (Henry Radio)as the TEMPO-ONE so a manual
for any should be good. Sweep tube finals (quick-melt). Seem to
remember it was a good basic rig.
Good luck, 73

Harris RF3200 HF commercial solid state transceiver, 1.6 to 29.999 MHz continuous RX & TX tuning in 10Hz steps with clarifier, can be quickly programmed for Marine ITU channels if required, RX works down to 500kHz. There are 120 user programmable channels plus full VFO coverage. Modes AM, LSB, USB, CW, ARQ, DATA & ALE. Power out 150 Watts PEP continuous when used with blower unit provided. Operator's quick start card, operating manual & programming manual, I also have the full security codes for programming functions. Microphone included although not the original (any modern Icom fist or desk mic with 8-pin plug will work with this rig). In good condition and fully working.

Price 375 UKL ono plus carriage.

I have a fleet of the Johnson Challenger VHF radios in the 150 to 160 mHz range. The mobiles are 40 watt. Johnson's new models have different size mounting brackets and connectors.

I am looking for some Johnson Challenger Plus 7152 or Challenger VHF 7164 VHF Mobil Radios. These wouild have to operate in the 150 to 160 mHz range. Mainly, I need them to fit existing brackets in the mobiles and the connectors to be the same. Also, the same programmer we have will work

Any places on the web to check??

My Desk KW has the following serial number:
100-101. I was told by a friend that I may have the first unit off the
production line. He said that he "thought" that the 100 meant the actual
product and that the company started the sequential numbering at 101.

Anyone have any knowledge of this matter?

From: "Mike, KA9RQW" <ka9rqw@qsl.net>
Message-ID: <1cYQ5.660$VF3.953@news.more.net>
Source record: 59209

I'm working on completing construction of a Heathkit HW101 and need to find one part that I know of to make this radio complete. I seem to be missing one of the air variable capacitors (Heathkit part # 26-122) needed for the RF driver board. I already had to locate a complete set of tubes (which I think I've managed to do) and a panel meter, but I think I've got everything else I need to finish this rig. In fact, I think I've only got a few pages of steps (10-20) left to complete before I'm ready to power up and attempt to tune it. Anyone got any suggestions on where to find this cap? Thanks!

I am looking for the schematics of a TRC77.
The TRC-77 is a small 6 channel HF manpack and I have one with a defective transmitter, most likely the TX switched power supply. I'm also interested in a battery box BB-447A for this set.

4111. Dow Key Bug

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-17 00:00:00 UTC
From: TLNixon@home.com
Message-ID: <3a154db1.66106825@news.moline1.il.home.com>
Source record: 59224

Does anyone have a drawing or a working Dow Key Bug? I recently obtained one and it is missing the small plastic, bakelite etc pads that one's finger and thumb actually contact. I need to know the type of material and need a drawing to make these pads.

I have corresponded with Dow Key Co, and they cannot find any record whatsoever that they ever made such an item, although in their company history page they talk about the company being established in 1946 by Mr. Dow to build the bugs.

I have found vibroplex's web site and have downloaded drawings and arts lists of one of their models that is almost the same as the Dow Key.

Perhaps even an old QST, CQ, Ham Radio, or '73 magazine ad showing the key would work.

Thanks-
Terry WB0VQP

4126. Need Manual and/or info on Demco Super Satellite

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-17 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8v4vev$v26$1@slb3.atl.mindspring.net>
Source record: 59239
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.cb,rec.radio.swap

Looking for a Manual and service info on a Demco Super Satellite setup.
I am trying to restore the following mid 70's vintage CB setup to original operating condition for a collection.

I need info on the following pieces:

CB Transmitter
Receiver
Speaker with modulator
stand-alone modulator
CAP (Business Band ?) Transmitter
25 - 30 MC Amplifier (Pre Mhz)
Wavalyzer

This is the Super Satellite, not the satellite.

Any pointers to Demco collector sites appreciated.

TIA,

David

4135. G5RV Misteries Unravelled at Last

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-17 04:54:50 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <8v2dmn$n58$3@plutonium.btinternet.com>
Source record: 59222

Computer program VARNEY.exe is now available:

Entertain yourself!

It models:-

Tuner+
Coax+
Balun+
BalancedLine+
Dipole&
Ground.

If you don't need the coax or the twin line just set the
appropriate length to zero.

Enter details/dimensions of each component in the system.

Obtain input impedance R+jX (as measured on your antenna
analyser) of each component, transmission efficiency, swr,
etc. Then overall efficiency.

Plus L-network tuner L and C component values. Also which
end to connect the capacitor. Or is no capacitor required ?

Vary frequency from 1.5 to 35 MHz. Vary coax length and Zo,
balanced line length and Zo, dipole length and height,
balun ratio.

Find those elusive resonant frequencies in a few seconds.
Even the ones which are not of much use. Special on-screen
facilities to assist the user to find resonances.

Force resonance and low swr at any frequency by varing line
lengths and/or Zo. Find optimum Zo for mult-band working.
If there is one.

Just watch the tuner micro-henrys and picofarads whizzing
round as you vary the feeder length.

Avoid inconvenient component values in the tuner.

Which way round should you connect the tuner ?

Can you make the tuner redundant on your favourite band. ?

How long must the coax be to render the tuner unnecessary ?
;o)

Check the swr bandwidth. But in fact there's no need to know any swr's - the impedance R+jX actually presented to the transmitter without the tuner is continuously available.

For the G5RV admirer, enter Louis' full set of antenna data ready for analysis by hitting a single key. Depart from the specification and immediately see the results.

Educate yourself on dipole behaviour. Do some indoor armchair experimenting while the weather is bad. When the sun comes out go into your back yard and start erecting with confidence and vigour.

Download VARNEY.exe in a few seconds. Not zipped-up. Run immediately. Read operating notes and off you go!

Has anyone had any experience with a Drake T4XB modified to use 6146s?

How complex / reversable is the mod?

Any difficulties with a T4XB modified to use 6146s?

Was this covered in any of the ham magazines? When?

Tnx,
Niel - W0VLZ

4144. FS: Heathkit APACHE, TX-1 and MOHAWK, RX-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-18 00:00:00 UTC
From: tubepwr813@aol.com
Message-ID: <20001118130753.06869.00000290@ng-mj1.aol.com>
Source record: 59155

Rigs are in very good condition. Very clean, front panels and cabinets are excellent. All original to my knowledge, no mods are evident.

Dial drum for the Apache has a few small cracks at edge, but is intact and barely noticable at all. Dial drum alignment is a bit off and needs to be reset. These rigs have not been on the air for about 3 years.

I am parting with them, due to another project. They are "pickup only" in the Northwestern corner of PA . Not able to ship.

Original manuals will be included.

$425.00 cash and carry (they are heavy too!)

Thanks

Hi ....
I have a Kenwood TS-940 that I would like to change the AM modulator
circuit. It has the normal inferior unbalanced SSB circuit for AM transmit.
Does anyone have or know of any design's for a high performance low level
modulator ?? The new circuit would have to operate at 8.830mhz that's the
IF of the radio. All info would be appreciated

Thanks John, KI4NR

Good Day - For Sale a Gonset SUPER SIX mobile converter. This is a tunable tube converter that covered 10, 11, 15, 19, 20, 40, 49, and 75 meters when operated into the car's radio. Got its power from the car radio and was great for AM operation. Was very popular in the mid and later 1950s.

Unable to try so sold as is. Looks complete and all the controls operate freely. But has a couple scratches on the gray box and a cracked knob.. The extruded aluminum case is good but has a couple small dents that can easily be repaired.

Manual and drawing is on BAMA

$35 plus postage from zip 98837.

Have a very clean Electro-Voice Model 664 Desk Mic for sale.
It is a older Mic that was sought after in the broadcast Industry.
It is unmodified other then I have replaced the cord with a
coiled one. Serial # 171172, It works very well. This mic is built
to last and is very heavy 4 1/2 lbs. It was bought new and used
on a set of Drakes and have used it on a KWM-2A, I am currently
using it on a Kenwood TS-520S.

William those are SP-210 LX Circa 1939-45 I think? Freq coverage was .1-20 mhz. In the LX series the broadcast band was replaced with low freq band. There was many forms of this receiver and originated from the first receiver produced which was the SP-10 in 1936. Great receivers and many were produced and is essentially Hammarlunds claim to fame and procuring a large contract with the military during the war because of its great design.

Hi Rob these are only prices Ive seen things go for in the past and from looking in my reference material. your mileage may vary. It depends greatly on condition,mood,weather,attitude etc..... 73 Brian

Hallicrafters S-76 w/speaker- $125-300
Johnson Viking I- $200-500 (Ive seen very nice ones in excellent collector quality condition go for $650)
RME DB-22A RF Amplifier/preselector- $25-100
Heathkit VF-1 VFO- $25-75
Barker & Williamson 380B- Im not familar with this?
Rider Manual Volume XII- $12-20
Hallicrafters S-22- $50-250
Hallicrafters S-29- $100-250
Hallicrafters S-30 (The S-30 is a radio compass. If thats what you got it is rare so price is hard to determine?)
HQ-120-X- $100-300
SP-200-SX- $75-200

Where can I look to determine the value of these items? I plan to clean them up, determine their condition, and offer them for sale or trade for a modern rig.

>In case John doesn't see your question, the DX40 is an early 1960's
>CW only transmitter.

Actually, it has an AM screen modulator built-in. Conventional screen modulation is quite inefficient - a single screen-modulated 6146 can only put out about 12 watts of carrier when operated within ratings.

> It uses a single 6146 in the final and runs
>about 90 watts input. I don't think you would be able to reduce the
>drive enought to work QRP.

90 watts input on CW results in about 60 watts output with that rig. The 12 watts of AM almost qualifies as QRP...

> It is also only a transmitter. A separate
>receiver would be necessary.

Yup - plus it requires crystals or an external VFO to work. It's vintage 1958 or so - it replaced the earlier DX-35, and was in turn replaced by the DX-60, all of which ran about the same power and had the same CW/screen modulated AM setup.

I wish to sell 2 old relays for open feed lines. These go way back but they
are in pretty good shape.

One is a dpdt Advance with 6 VDC coil. The ceramic base is about 3 by 3-1/2
and the contact spacing is about 2-1/2 inches. The contacts are heavy duty.

The second one is a dpdt Meridian with 115 VAC coil. The base is not ceramic
but of a very hard gray material and it is about 3 inches square. Contact
spacing is 2 inches.

I will sell either for $9 or the pair for $13 plus shipping.

4172. (Help) Trans - Oceanic 1000

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-19 00:00:00 UTC
From: revdavek@webtv.net
Message-ID: <17025-3A184EA7-47@storefull-223.iap.bryant.webtv.net>
Source record: 59100

I need help with an old Trans Oceanic model 1000 chassis # 9ct40z2

It seems the pin that is the "+" is grounded. I checked this with my meter and there is continuity to ground. I opened the set up and removed it from the cabinet to have a look around and see nothing that might have smoked. Can anyone please help me out as to what next to look for. With 12 volts to the radio all you get is a very slight crackle when you hook power to it from the speaker.

Thanks,
Dave.

The BK is back for sale again
Here is the pix http://joeamp.home.mindspring.com/TTester.jpg
BK 10-15 I replaced the rotted cord and on off switch with NOS Carling
Tested several tubes, 6L6, 1B3 12AX7's it works fine.
I found the extra scroll it is brownish looks like some water damage but
intact.
I have used this till getting my Hickoc 2 years ago but went over it real
well:
It's going to need some failing looking series shunt resistors on the
filament voltage selector rotary (1 watt's) in the future.
several pin head size rust dots where finish was chipped, chrome is good
Price: $130 OBO (price does not include shipping on this tank)
Seen em on ebay go for $200 +

Joe,

In case John doesn't see your question, the DX40 is an early 1960's CW only transmitter. It uses a single 6146 in the final and runs about 90 watts input. I don't think you would be able to reduce the drive enought to work QRP. It is also only a transmitter. A separate receiver would be necessary.

4187. HQ-180A for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-19 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20001119075248.18444.00000505@ng-mc1.aol.com>
Source record: 59180

I have an HQ180A with the crystal calibrator. Good condition, but has one mod and one problem:
The mod is that the AC power switch has been moved to a toggle switch to the right of the tuning dials.
The problem is that sensitivity is reduced on the upper freqs, and above 15 Mhz I can't hear anything, not even the calibrator. Proably needs re-alignment, but sold as-is because I don't have time. Great on broadcast band where I do 99% of my DXing.
$325 + shipping from Long Island, NY

I offer a National NC-125 communications receiver in fair/good condition... All original knobs, meter and paint. Front panel in good shape with all controls working OK... Cabinet is OK and original. All tubes light and the receiver works with rich audio on 31 meter SWB... Needs an alignment to bring the main tuning and bandspread (set) point in line. The chassis is good and original with no rework attempts observed... A nice receiver for a winter project... $125.00 plus half ship from 97006, thanks... Pat, AA7FG - Oregon...

4200. WTB: Operation/Service Manual for Motorola R1201A S.G.

Date: 2000-11-19 00:00:00 UTC
From: bowenb@best.com
Message-ID: <3a1819be.132908406@news.ncal.verio.com>
Source record: 59193

Greetings,

I recently acquired a Motorola R1201A Signal Generator. It is a great generator but has developed a problem with the built-in AF modulation system that I need to repair. Unfortunately, the former owner did not have the Operations/Service Manual for the generator.

I've contacted Motorola with no results regarding getting a replacement manual. I'd like to get this manual: either an original or a decent copy would be fine.

If one of you has this manual, you can contact me directly via email or post your reply to the newsgroup.

Regards,
Bill Bowen
bowenb@best.com

I agree To buy or Auction of Any items decribed in the heading of this new group is ok with me..
I remember when I use to use this newgroup a couple years ago there were sell adds and FA : adds that were all over . now we have 1 ass that i know off keeps e-mailing anyone who post an For Sale or Auction..
This place is no where near as friendly when i use to trade radios here

4208. Old Ham Gear Value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-19 05:30:58 UTC
From: rodstree@usenm.net
Message-ID: <8v7oij$o6e$1@nnrp1.deja.com>
Source record: 59177

I have a Hallicrafters S-76 receiver with matching speaker, Johnson Viking I transmitter, RME DB-22A RF Amplifier/preselector all with original manuals. I have a Heathkit VF-1 VFO and a Barker & Williamson model 380B TR Switch without manuals. In addition I have a John F. Rider Perpetual Trouble Shooter's Manual Volume XII from 1941. It includes the Hallicrafters S-22,S-29, and S-30 receivers as well as the Hammarlund HQ-120-X and SP-200-SX.

Where can I look to determine the value of these items? I plan to clean them up, determine their condition, and offer them for sale or trade for a modern rig.

Thanks in advance for any help you can offer.

Hi,

I am interested in your Heathkit station. Do you have the manuals?
What Zip do you live in so w can calculate UPS shipping? You said it
included a SWR meter, but that was not in your picture. Is it in as
good of condition also?

Thanks

Larry

4216. Pan Adapter REB on USS Oceanus (ARB-2)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-20 00:00:00 UTC
From: novatech@eskimo.com
Message-ID: <8vbfsoejb1@eskinews.eskimo.com>
Source record: 59124

In the continuing effort to clean out my heap, I came across
a manual for Navy Model REB Panoramic Radio Adapter. This
is not so special in itself, but the manual is stamped:

"(ARB-2) U.S.S. OCEANUS (50328)"

The ARB-2 was a repair ship that spent time in the Pacific Theatre
during WWII.

The question then is there any newsgroup for Oceanus Alums. If there
is a place that would want this as part of a "museum piece" I would
gladly pass it on.

I couldn't find a group on the web.

Any ARB-2 alums reading this group?

Thanks,

Steve.

I didn't see your question till tonight, Its best to respond by email and not the NG.
Not all the gear was in the photo anyway, the station was sold immediately. Several bitched and moaned about the age and UPS shipping cost then wanted it for nothing and lost out.
However thanks to the dozens of *nice* people who responded for her, "you know who you are"
She has a good home and will not be pimped off "over there"

Actually there is a web page about this radio.

Also known as the TEMP ONE in the USA and sold by Henry Radio here.

You can find it via the links at
http://dmoz.org

Search for "boatanchors" and take it from there!

Dave,

What you found is perfectly normal: the Zenith 1000 and 3000 series
are POSITIVE ground radios. This was not uncommon in the early days of
transistor radios, since most of them in those days used PNP
transistors.

If all you are getting is a crackling noise, remove each transistor
and clean the leads. Then insert and remove the transistor from the
socket 4 or 5 times to burnish the contacts in the socket. If that
does not solve it, CAREFULLY clean the bandswitch with some electronic
contact cleaner - I've had good luck with the tuner cleaner sold by
Radio Shack.

Try those two items put and if you still have a problem, post a
message to the group.

Hi and thanks for reading this post

I recently acquired a General Electric 40ch CB radio Model A3-5825B (twin board model) with the view of putting it on 10m.

Has anyone got the schematic diagram for this radio as I don't have one and the rig has been tampered with by someone. Currently the lights come on but there is no-one at home (no RX/TX). It appears that components have been added and subtracted but I don't know what the correct ones should be.

Any help would be appreciated. Scanned schematics are OK but please email me direct and don't forget to remove the SPAMJAM

Thanks in advance

4237. Re: Zenith radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-21 00:00:00 UTC
From: "Chas. Bullett" <bullett@dlois.com>
Message-ID: <cpsS5.379$r7.631@harpo>
Source record: 59009

Rob;

According to John H. Bryant and Harold N. Cones's publication "The Zenith Trans-Oceanic", the G503 originally sold for $49.95, and is not included in their price list(s). Details appear on page 76. It was available in two versions, the tradiontal black model - model #5G40, and "Oxblood version", model 5G41. While physically unique, it was not remarkable electrically, and was a fairly typical radio.

This radio's big brother, the G500, originally sold for $99.95, and is now regarded somewhat rare, averaging a price of $130, depending on condition of course. I've seen it ranging from 60-or so dollars to $160 at hamfests... quite a spread. Bryant and Cones confirm this in their book from Schiffer Publishing Company, 77 Lower Valley Road, Atglen, PA 19310.

The G503 was last offered in 1951. From a deco-art perspective, it may be worth more to collectors of period pieces from that era, rather than to radio affectionado's who are also looking for that ever-elusive "good-deal".

My opinion? $35-to-$70, depending on overall condition. I have studied the Trans-Oceanic line, and now regard "The Zenith TRANS-OCEANIC" as the definitive bible for this line.

I hope that this was helpful. Buy the book... the photographs and restoration suggestions are fabulous, and I think enhance the value of any Trans-Oceanic you wish to sell.

Message-ID: <3A1A8769.36525656@snet.net>
Source record: 59014

Hi,
The National HFS was introduced to replace the earlier 1-10 and 1-10A receivers for VHF work. They were never really sensitive or stable radios for these bands. They also require a seperate power supply to get proper voltages for the B+ and filaments. National called these power supplies Doghouse supplies as they were kind of shaped that way. Do you have the power supply? Also taking one of those dial assemblies apart to repair is challenging. It's not impossible, but mechanical skill is needed to accomplish this. The dial is refered to as a PW dial and instructions to remove and repair can be found on a web site called Radio Bay. The address is:
www.io.com/~nielw/index.htm
Hope this helps you determine if it is worth your time to restore. Also if you decide to sell the Eldico station I would be interested in it. I never had a Collins S line because they were too expensive, but this sounds interesting. 73 and good luck. Gary WA1EWQ

4273. Eldico T-102 / R-104 Tx/Rx pair?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-21 03:43:54 UTC
From: tomrscott@sterlink.net
Message-ID: <8vcr1p$k14$1@nnrp1.deja.com>
Source record: 59000

Our school ham club -- for which I am the sponsor -- recently received the donation of an Eldico transmitter and receiver pair with full documentation from the family of a silent key ham. These were apparently manufactured by "Radio Engineering Laboratories Inc. of 29-01 Borden Avenue, Long Island N.Y." The set is named "Type S-119" and consists of the "T-102 Transmitter" and the "R-104 Receiver". The full set also included a power supply and control unit, but this set comes with a home-brewed power supply and control accessories. This appears to be a poor-man's Collins S-Line look alike (no claim from me that they're comparable technically!). Is anyone familiar with these radios? Are they worth putting some work into getting them operating? Do they have any collectable value? Please reply by email.

4276. National HFS questions...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-21 04:48:14 UTC
From: thriscott@my-deja.com
Message-ID: <8vcuqd$n66$1@nnrp1.deja.com>
Source record: 59005

Our high school amateur radio club has received a donation from the family of a silent key ham of a "National HFS" receiver. The unit only contains the plug in crystals for the 2m band, and we don't have any documentation for the radio. First can we get more coils and the documentation for this radio, or specs for reproducing the coils? Second, the tuning knob seems to be frozen on its shaft. It tunes fine, but there are numbers showing through little windows in the knob skirt that look like they should rotate behind the knob skirt, but they are stuck partly covered up. It looks like maybe the button in the middle of the knob should push into the knob and allow the skirt to rotate separately, but if that's how it works, the button is frozen. In either case, can someone give me a trick for freeing this up or tell me how it should work? Thanks and 73!

4278. FS: APS-104 radar modulator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-21 07:02:37 UTC
From: 02worley@snowhill.com
Message-ID: <3A1A1E1E.B125DB06@snowhill.com>
Source record: 59006

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. Please REMOVE the"02" to reply or call 334-347-5281 day/eve.

4284. Re: Looking for a Drake L4 Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-22 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <20001122150354.21786.00001004@ng-fj1.aol.com>
Source record: 59042

After I test it out, I'm going to be selling an L4B, which is the next variant after the L4. Will likely go on Ebay. This particular one I got as part of an estate of the original owner. It is wired for 110v, but could be changed to 220v; it is my understanding that it was wired this way and only used on low power. It has the original boxes for the rf deck and power supply. Original manual. Have to test it first and see how it performs. So you might want to watch Ebay in the next few weeks.

73s,

Evan

Two days ago I ordered 10 pieces of paper money from 10 different countries from a company called Perth Numismatics. Lo and behold they arrived today and they are very nice and colourful. They even have a bill from Antarctica. I didn't even know they existed. These are perfect for stocking stuffers or people who are hard to buy for. The website address is www.perthmoney.com
Good luck and Merry Christmas

4288. FS: DRAKE SW-4A with matching MS-4 loudspeaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-22 00:00:00 UTC
From: Richard Links <richard.links@ucop.edu>
Message-ID: <8vhjvt$9cj$1@agate.berkeley.edu>
Source record: 59046

For Sale:

Drake SW-4A general coverage short wave receiver with matching model MS-4 loudspeaker. These pieces date from about 1968.

This set is a hybrid of tubes and transistors. The example I offer for sale is working, but the set has been somewhat exposed to dust and moisture over the years. The copper-clad chassis shows some pitting, but the front panel, knobs and the dials are in good condition. There is some wear on the metallic outer skirt of the main tuning knob, however.

I recently refinished both cabinets with satin black lacquer, so they actually look fairly good, considering that there was some rust on them both when I first obtained the two units.

Offering the pair of units for $225.00 firm. This does not include shipping costs, however.

Located in Berkeley, CA

Thanks

Richard Links

I didn't know that demco made a business band transmitter for the satellite?
That is verry interesting. The old business band was above channel 23. I
can't remember how far up though. Don't have a schamatic for that one, think
I have one for the browning mark II around here somewhere.

Newsgroups: rec.radio.amateur.boatanchors,rec.radio.cb,rec.radio.
swap
Looking for a Manual and service info on a Demco Super Satellite
setup. I am trying to restore the following mid 70's vintage CB
setup to original operating condition for a collection.
I need info on the following pieces:
CB Transmitter
Receiver
Speaker with modulator
stand-alone modulator
CAP (Business Band ?) Transmitter
25 - 30 MC Amplifier (Pre Mhz)
Wavalyzer
This is the Super Satellite, not the satellite.
Any pointers to Demco collector sites appreciated.
TIA,
David

You can try
http://bama.sbc.edu/
Dunno if its there but its the most complete site around.
If not, try www.topclick.com and try a search. That engine
gets into a lot of personal webpages.

I have a transformer with an open secondary. I can see the copper has been zapped off the terminal post and the open end is too far down next to the core.

How rro I remove the metal C or H metal slices in order to get to and rewind the primary? Varnish remover or a hammer?

Thanks, Joe

4308. Help on Collins VFO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-23 00:00:00 UTC
From: Walter Treftz <boomer1@hitter.net>
Message-ID: <3A1D750B.E808D342@hitter.net>
Source record: 59066

Maybe some of you military collectors can help me!!!

Have an obviously oscillator subassembly that would
like to consider using for the VFO on the new WARC
ham bands with an old Viking II-CDC that I have
(could use conventional old ham VFO for the older
bands but need something for the 10/18/24 mhz bands.

This unit appears to have "maybe" come out of an
AN/ART-13, Navy TDH (big 5kw jobbie) transmitter
(as that is the only places I have seen these knobs)

All I know is;
1) Has "Colling Part Number 344E" embossed in
top of the subassy.
2) Uses an 837 tube
3) Knob on front (with small revolution counter)
like on ART-13 or TDH
4) Size: 12" deep x 4" wide x 4.5" high.

Does this ring any bells??? Can anyone supply data
(schematic, freq output, etc) or anything at all
on it??

Any/all help/info/input will be greatly appreciated.

I may be from the R-105/ARR-15. The '15 has a smaller autotune knob
than the ART-13. The '15 (and the ARC-2) has a little dogbone lock in
the center of the knob. The ART-13 doesn't have a PTO, per se. That is
to say, its a housing full of components, rather than one of the sealed
"tin-can" type, al la S-line, R-390, R-392, et al.

I guess you know AES sells them, all sizes. If you need a
big quantity maybe they can get off of the catalog price.

> except for filament voltage.
>
> Were fewer of them made? Is there something wrong with a BC-224?

Yes, and no. The AAC and later the AAF ordered comms equipment based on the numbers and types of aircraft being provisioned. Toward the end of the 1930s, the growing avionics load forced designers to rapidly begin the shift to today's 28 volt primary systems, and away from the original 14 volt systems (except in light aircraft.) By 1942 the shift had largely been made. The huge numbers of 28v aircraft built in WWII resulted in many more 348s than 224s for simply that reason. Other than a change in the filament wiring and dynamotor, there is no substantial performance difference between any 348/224 pair of a given letter suffix.

Source record: 59090

It's not very often that you see a Twoer in really good shape, one that remains unmodified without the front panel all hacked up. This unit is in really good shape, unmodified except that the original owner drilled three small holes in the case (two on top, one on the right side) to accomodate a mounting bracket. The holes were placed and drilled neatly and do not distract from the overall appearance of the unit. Excellent front panel with original knobs, no scratches and only one small wear mark on the top edge. Unit is being sold with the proper AC cord, a proper 12-volt Heathkit vibrator power supply and cord, an original microphone and two (hard-to-find) extra microphones. In a few days, will be able to e-mail a picture on request. Asking price: $65 US.

Just an advance notice. Within the next week I'm going to be auctioning on Ebay a Drake C4 console, complete with AC outlet box and remote coax switch that was never used outside, including original manual. The L4B is complete with power supply and original manual. Bought from previous "owner". Each item is about an 8.5 to 9 on a 10 point scale. Awaiting digital pictures before I post them. If I can't get the pictures, I'll post them without.

Thanks for reading the posting.

About once a month I post the availability of this font that I had
modified by a commercial font designer. It is a true slashed-zero Andale
Mono fixed-width font extremely suitable for DXBase 2000 / 2001 and really
any logging software. It's advantages are two-fold

1. It allows for easy discernment between O's and 0's with the slashed zero

2. Because it is a fixed width font it provides perfectly aligned columns in
the DX cluster windows.

Available as a 47K zip file download with installation instructions.
Last month there were over 230 downloads of this font.
It is on the Software Download Page of my site directly beneath the text
that describes DXBase 2001. Enjoy.....it's FREE.

I never have figured out how to make that thing work.
I have their software and followed the directions, but usually end up at
some dead end.

Doesn't almost every font have a slashed zero (ï¿½) as one of the characters? I just checked a few of my fonts and all of the ones I checked did.

Yep, but an Apple computer, for instance, won't display that zero
correctly if it was typed on an IBM/Microsoft machine.

Source record: 58969

I found a new Swan meter in a box of meter stuff. It is part number 260 14028.
It reads to 800 ma on the bottom scale and the top is an S meter.

Anyone have a clue as to what Swan rig it belongs in?

Thanks!

Ya, but...

Just because _you_ can type a slashed zero with your font, and just
because _you_ can see it's rendering on _your_ screen, means *nothing*
for the hundreds of thousands of usenet users out here.

I suppose your font is proprietary to the operating system from
from the convicted monopolist from Redmond, Washington -- nicht wahr?

Hi,

Been restoring a Heath Mohawk and found I am missing the dial pointer. Would like to find one out of a Heath Mohawk or Heath Apache. The orginal part number is 463-15.
Let me know what you would want for the pointer.

Would also consider a Mohawk that is suitable for parts only as well.

Thanks & 73,
Michael

Is there anybody out there who cannot see the slashed zero in the parenthesis above, or in the parenthesis here (ï¿½)? I was under the impression that this character was included in standard ASCII, and therefore should be visible on all computers using western character sets. Perhaps I'm wrong.

> I suppose your font is proprietary to the

Okay, it looked like a slashed zero to me. But, I suppose in a spreadsheet program it won't act like a slashed zero.

You're wrong. I see a question mark in the parenthesis when reading the
post, and backslash three three zero in writting this followup.

The default character set here is US-ASCII; I had to change it to
ISO-8859-1 to even get this thing to post.

That is not slashed zero, it is a vowel in at least Norwegian and
Danish, the uppercase ï¿½ is at U+00D8 and the lower case ï¿½ at U+00F8.

>Yep, but an Apple computer, for instance, won't display that zero
>correctly if it was typed on an IBM/Microsoft machine.

These characters are in the same positions in Unicode, ISO-8859-1 or
Latin1 (as used by most modern unixes), Windows code page 1252 etc.

MS-DOS and Apple have both their own incompatible code pages for
Western European languages. HP-UX had their own incompatible code
pages and of course all big IBM machines use EBCDIC, which is
completely incompatible with anything else.

Yes, but it's *not* a zero...it's <Option><Shift><o> Hex 'AF' which
may not display the same in other fonts or operating systems. As far
as I know, codes above 127 are not part of the ASCII standard, which
is 7-bit, and they will vary from implentation to implementaion.

An ascii zero is 30 hex. Other codes will display what looks like a slashed zero on some machines. Software, such as logging programs and call sign capture functions in terminal programs, are not likely to recognize these other characters as a zero. Sending anything other than 30 hex should be avoided. If you want to see a slashed zero, the correct way to do it is to install a font that displays a slashed zero on the screen for 30 hex.

If I remember correctly, the ASR-33 had a slash through the zero.

What I see is an equal sign ("=") with a vertical bar ("|").
It be one of the "IBM Graphical Characters" for drawing boxes: x'D8'.

>I was under the
>impression that this character was included in standard ASCII,

Standard ASCII !!! LOL !! At best ASCII is 'standard' up through
x'7F' -- and is wide open for (re)intrepretation from x'80' - x'FF'.

According to the news headers, you are using linux and slrn and your character set is declared as iso-8859-1 and the original message also contained an explicit code page declaration of 8859-1. How on earth did you manage to display the original text in MS-DOS (OEM) US code page 437 :-). There is definitely some problems with your configuration.

Hi Mates.

More free cats:

1 Pile of GE hybrid Moblie Radios. Mostly transistors, with tube driver and final. don't know whether they are high band low band or UHF and I'm not going to figure it out either. They were free to me and God only knows why I drug 'em home. Seems at the time I was going to use the Transistor HVPS for something..But now they are just taking up space. No control heads and docs. There may be 6 units or more in the pile. Free to a HAM and pickup only in Sacramento. The big Flying Saucer power transistors are worth the trip I would think....

2. One Hammarlund BC 779 with power supply still available free. Unit is cruddy but can be restored. with tubes, no documents and it has not been powered up nor will it. Same conditions as above. Free to a HAM and pickup only in Sacramento.

This makes me curious. In the US, is it legal to operate a CB that has been converted to 10 meter Ham operation, assuming of course you are a legally licensed ham with privileges on 10m? I'm not sure how this would be different from building your own radio from scratch, which is legal.

If it is illegal, I'm wondering how other countries view this kind of thing.

Just curious,

Robert / KG4FGN

Never say never. Almost all of the older home PCs had the slashed zero. My trs-80 does. I just fired up my Commodore 64 and my 128, both of them have the zero slashed (heck they even have the zero slashed on the keyboard).

A slashed zero font with it really being the zero and not a special character is a cool addition. Being Monospace helps, there aren't that many monospace character sets out there that are easy to read.

> Almost all of the older home PCs had the slashed zero.

Many early PCs displayed the ASCII zero with a slash on the screen.
The ASCII character however was 30 hex, the same character that
displays a non-slashed zero on most fonts. 30 hex is and always has
been the *only* valid ASCII code for zero. It is up to the receiving
terminal design to determine if the displayed zero character has a
slash or not. Any other character will fail in software analysis even
though it may "look" like a zero on the screen. The only proper way to
display a slashed zero is to have the receiving machine display a
special slashed zero font in response to receiving a 30 hex or to have
the receiving software send a slash zero "look alike" to the screen in
response to receiving a 30 hex.

Hello--
Also, IIRC many of the late-1970s-vintage "dumb terminals" (e.g., Televideo 910, ADM xx, etc.) either included a permanent slashed zero in their character-display ROMs or had a switchable option to display either a slashed zero (or one with a dot in the center?). Can anyone confirm this?

Never expect a character typed using the Option key on a Mac to come out the same on a Windows machine. Never expect a character typed using the Alt key on a Windows machine to come out the same on a Mac.

> > I suppose your font is proprietary to the
> > operating system from from the convicted

> > -- nicht wahr?
>
>
> Nope, I have the Cupertino operating system, with a whole lot of fonts
> (some proprietary and some not).

The character in parentheses looked somewhat like a slashed zero on this Macintosh, but it really is not. It was typed by holding down both the Shift and Option keys while typing the letter "o". If a Windows user typed what looks like a slashed zero, when I looked at it on this Mac I have no idea what it would look like, but I'll bet it would look different (unless he typed an ordinary zero; then it _WOULD_ look like a slashed zero to me).

This is one reason why Mac users should never use the Option key in e-mail or newsgroup posts, and likewise Windows users should never use the Alt key. I figured out from context some time ago that the lower and upper case Pi characters I occasionally see on this newsgroup really were intended to be 1/4 and 1/2. I can get those Pi characters by using the Option key, or both the Shift and the Option keys, with the letter "p" (easy to remember) but I have no idea what they would look like to a Windows user. Let's find out: Here's the one with Option alone: ø. And here's the one with both Shift and Option: ø.

By the way, the current versions of the Monaco and Mishawaka fonts (both monospaced), and the Chicago font (not monospaced) on the Mac give a slashed zero just by typing the ordinary zero. Since I use Mishawaka as the screen font for my e-mail program (Eudora) and my newsreader (NewsWatcher) I see lots of those slashed zeros onscreen.

>sets. Perhaps I'm wrong.

Standard US-ASCII (ANSI_X3.4-1968) is that obsolete 7 bit character
encoding containing 0..9, A..Z, a..z and 24 punctuation characters
and 32 control characters. Standard US-ASCII and its international 7
versions (ISO-646, in which a few punctuation marks were replaced with
non-English vowels and consonants) were used in most non-IBM computers
into 1980's. For instance the mechanical Teletype or the VT-100
terminal supported only US-ASCII or other international 7 bit
variants.

The only way to display the (ï¿½) character on these systems is to use
a Danish or Norwegian terminal and send the 0x5C code to the terminal,
which on the US-ASCII terminal would be displayed as the backslash (\)
character.

In 1983 the VT-220 terminal supported an 8 bit with some modifications
became the ISO-8859-1 (Latin1) in 1987 supporting most Western
languages at the same time, includes the (ï¿½) character.

Thus, if you are using 7 bit devices, such as VT-100 terminals, you
will not see that character.

>> I suppose your font is proprietary to the
>> operating system from from the convicted
>> monopolist from Redmond, Washington
>> -- nicht wahr?

Western Windows variants use code page 1252, which is superset of
ISO-8859-1, so the ï¿½ is in exactly the same position.

However, in MS-DOS, the US code page 437 does not contain the ï¿½
character at all and the Western European code page 850 keeps it in a
different position, thus, some transcoding is required to display it.

The Mac Roman character set has the ï¿½ character in yet an other
position, so some transcoding is still required.

>The character in parentheses looked somewhat like a slashed zero on this
>Macintosh, but it really is not.

As far as I can figure out, there has never been any slashed zero characters in any computer character sets. However, there has been a large number of font variations that displayed the ordinary digit zero in somewhat different ways. Some used a completely round glyph, other used an elongated glyph, some a truly elliptical glyph, some a zero with a right facing slash, some with a left facing slash, some used a centre dot and some even some kind of underscore to distinguish from the letter O. All these are simply glyph variations of the ordinary zero digit.

On hard copy devices you could use overprint by sending the digit 0, backspace and slash. In Unicode a slashed zero could even be constructed by using U+0030 U+0336 (digit zero and combining long stroke overlay).

All the talks about slashed zero appearing in all fonts is a misunderstanding, by people who think that Norwegian and Danish uppercase vowel (ï¿½) U+00D8 and lover case vowel (ï¿½) U+00F8 look like a slashed zero. I am writing this on a Norwegian keyboard layout and that vowel is immediately to the right of the L-key. This paragraph should be correctly displayed on any system supporting ISO-8859-1 (Latin1).

Ann Arbor terminals had a slashed zero as did all of our competitors. The
IBM 3270 and compatibles had a dot in the center. The early computers did
not have video displays, they used ASR33's and other Teletype Corporation
products as I/O. The early computers that used Video terminals carried over
the slash zero as they were called "glass TTY's".

Almost as much as we Model 15 freaks....I don't remember what
model "TeleType" my father had in his office at the NY
Mercantile Exchange but it was in 1947.....and there was a live
"operator" on the other end of the line to chat with while
waiting for real traffic.

My old Qume QVT-103 has a permanent slash-zero - the terminal is still
in use with a PDP-11 emulator running on a 486!

Both examples use the extended ASCII character sets associated with your particular code page. A true slash zero will display with the normal ASCII zero in the 128 character code set (030)

Amateurs have a very privileged status in the U.S. Every other service may only operate type accepted equipment. We can operate any piece of junk that we can buy, build, modify or cobble together, as long as it meets the technical standards of the service. As technically skilled operators, we are expected to understand that our equipment does meet those standards.

The only limitation applies to external power amplifiers below 144, and specifically between 24 and 35MHz, where there are some restrictions on what we can build/cobble together.

>>
>> ... and you have a "lower case slashed zero".
>>
>>
>
>
On my machine you get a 'ï¿½' like this...
Turn on the 'num lock'.
While holding down 'alt' type 0, then 2, then 1, then 6 ON THE NUMERIC
KEYBOARD (or whatever you call it - you know what I mean - the one which
has the 'home', 'pg up', 'end' etc). After you have typed the '6',
release the 'alt' key.. and up pops the 'ï¿½'.

Note: the 'top row' numbers DO NOT work.

Cecil (W6RCA) did post (some time ago) a list of the interesting
characters which he had found between 'alt0130' and 'alt0255', although
I find that mine seem to start at 'alt0161' (I only get 'ï¿½' before
that). 'Alt0181' is a useful one - it's 'ï¿½'.

There are two problems...
1. I believe that everybody may not receive the 'correct' character -
eg, the 'alt0181' should be a Greek 'mu' - who didn't get this?
2. I haven't worked out how to do this on a laptop where there is no
numeric keyboard.

ï¿½ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½w!

Ian.

4442. Robyn Prototype for SBE-36

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-27 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8vv72l$646$1@nntp9.atl.mindspring.net>
Source record: 58861

Hi,

I have a Robyn Digital 500 SSB Transceiver made by Robyn International. It is the prototype for the SBE-36 HF rig, and was produced in limited numbers. I have the matching power supply with speaker and the original manual. The rig is not 100% functional at this time due to linkage missing between plate/load dual concentric controls leading to 2 tuning caps. I have no doubt that it will load up, but never have tried it, as I got it for the collector value. Receive works, and nixie display/vfo track after a warm-up period. It is not a "driven daily" rig, but is in above average condition for it's age and in very presentable form as a collector's piece. I recently say a SBE-36 go through eBay for $350.00 to a SBE collector (I contacted him after the auction close) and wondered if there was any demand for this rig in collector circles. I have been weeding out my old rigs, and keep looking over at this one trying to determine if it will go or stay.

Any idea of worth, value, collector appeal (or whatever term applies to this type of commodity)?

I also have 2 Gonset Communicator II AM rigs for 2 meters that fire up without incident, a Lafayette HA-35 6m AM rig (has non stock meter), Hammarlund FM50a, Hammarlund FM60a and Ameco TX62 Transmitter that I may be tempted to part with if there is any demand or interest.

I am trying to make some room around here, and would like to get an idea of current going prices on these. I would like to get a good quality 6m vintage AM rig that is good to go on air with to work occasional band enhancements.

Also, having a history of not always exercising reason or displaying good sense, would entertain trades of other interesting vintage gear to fill the void after dusting the empty spaces that these may possibly vacate.

4451. Where to locate what value of loading coil ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-27 02:50:17 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <8vsieqddf2@plutonium.btinternet.com>
Source record: 58931

NOW AVAILABLE, Program "LOADCOIL.exe"

COIL LOADED VERTICAL OR SLANTING ANTENNAS

This program does a job similar to program Vertload. In some respects it is a more accurate model. It is easier to use - input data is entered in a more logical form and requires less thinking about. Assistance with coil design and performance prediction are the principal features.

In particular, coil height is entered as a percentage of overall antenna height and there are facilities to 'slide' the coil up and down the antenna when searching for the height of maximum efficiency. Overall height, coil length, coil diameter and frequency can also be continuously and rapidly varied in fine incrememts via the keyboard.

Output data is in a more interesting form. The effects of the coil's self-capacitance on self-resonant frequency and on Q when the coil is mounted too high up the antenna are also shown.

The program covers a wide range of antenna proportions, from VHF via 10 to 160 metres, vehicle mounted or at base stations. Anywhere where a vertical or slanting (or perhaps even an inverted L antenna) is appreciably shorter than 1/4 wavelength and performance would benefit from insertion of a loading coil somewhere along its length.

A detailed description of how the location of the coil affects operation is included. Data is provided to assist users to crudely estimate input resistance of a set of buried radials.

One small binary file: 52 kilobytes. Download from website below in a few seconds.

Howdy all.....Am in the (slow) process of resurrecting a Hammarlund HX500 transmitter.....Seems the OEM power transformer may have been replaced with a custom Hammond P/N 71465. Immediate problem is that I have way too much HV and was wondering if anyone had the original specs for the HX500's transformer kicking around. Wouldn't mind having the specs on that Hammond P/N either (seems to have an unbalanced tap but with no smell or other "bad" signs.....seems unnatural for this typical full wave rectifier setup.

Any help (or war stories of the HX500) appreciated.

Today we would call it a font or glyph variation. It was printed, when
0x30 was sent to the terminal (or 0xB0 if odd parity was used). There
was not a separate character code for slashed zero.

The print cylinder (or whatever it was called on ASR-33) did not
contain _both_ the ordinary zero and the slashed zero.

Thus, the slashed zero did not appear in the character set as a
separate entity but rather as a glyph variation. The same applies to
the early home computer character generators with _only_ the slashed
zero (but not ordinary zero) in the character set that others have
commented in this thread.

Today, would you considered a zero printed in italics to be a
different character when printed in boldface :-).

Paul

On a Windows machine hold down "alt" key and type 0248, like this ï¿½

... and you have a "lower case slashed zero".

I just wonder why you all are so interested in writing Norwegian or
Danish characters :-), unless you speak either language. Those
characters are useless for numeric entry into any programs requiring
numeric input, such as spreadsheets.

How many still use a stand-alone VFO? (for fun!)
I had my novice when the rules changed allowing us to
break free of crystal control.
I have been fooling around with my old Drake 2NT/2C
set up. I have 3 VFOs I have been trying, but looks like I have to pop the
lids on them.
The Hallicrafters HA5 has a bit of a wobble to its' frequency. No drift, but
bounces up and down, now and then as I transmit.
The Globe V-10 very slowly drifts. A dx-type QSO with "599 Tnx Qso...73"
would not even notice, but in a chatting qso, the other op will have to
follow me with his RIT.
The Lafayette HA90 (Kenwood??) seems to need a normally closed contact on
the VFO key jack (opposite of the other two)
What have been your experiences???
...Dave

Source record: 58873

Preliminary notice - several complete sets of 618T module extenders available. These are the extenders as used in the Collins 678Y-1 Maint Kit - it's nearly impossible to repair (or perform some alignment functions on) a 618T without them. Circuit diagrams, documentation available. Most items brand new in original sealed packs, with Collins inspection tags. More info available - email me.

I'm in Australia.

Interesting reading. I was especially interested in the paragraph below,
which says this group is primarily for discussion. Over the last two to
three years it has deteriorated totally into a place where sellers post ads.
What a shame. And it's especially ironic considering that there already is a
special group (rec.radio.swap) specifically created for buying & selling.

Phil
philnelson@antiqueradio.org

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew,
and .space are for more specialized areas of ham radio: discussions about
antennas, the older tube based amateur, military, and commercial gear,
commercially-made equipment, homebrewing, and amateur radio space
operations.
The .equipment group is not the place for buying or selling equipment;
that's
what rec.radio.swap is for.

[This followup was posted to alt.ham-radio.am and a copy was sent to the cited author.]

Well, sort of! I asked the fellow at QRZ.COM to restart the e-mail list, "HAMTRANS". Some of you (like me) may remember it. I never was able to take advantage of it, apparently because it was poorly moderated, and some W7 something-or-other ripped off a bunch of folks. Well- I'm not here to rip anyone off- and I hope there are others who, like me, enjoy buying, selling, trading, swapping, whatever, amateur-radio related items, some of which are too large, too heavy, or bulky, and it is unreasonable to ship these items. Maybe it's a small item, but perhaps you can can't afford the shipping due to fixed income, but want it, and the shipping just pushed you over the edge of being able to afford it? Well, we all need to help each other!

When you plan a trip, please try to post your itenerary to the list if you don't mind transporting an item along your drive path. If someone is buying an item, and lives along your drive path, they will contact you and ask for your assistance. In return, other list members will make offers to transport items for you sometime (we hope this is the way it's going to work).

Now- some VERY simple rules:

1. Don't expect the transporter of your item to box it up for you. Your seller should have your item ready to transport, JUST AS IF IT WERE GOING TO BE SHIPPED UPS. This will offer some protection against scratches and damage during the shipment, and will help your driver not get muck all over his/her vehicle or ruin the interior (we hope). If damage occurs to your driver's vehicle by your package, you should voluntarily pay for the damage. I sincerely hope that any damage claimed would be so obvious so as not to leave any room to debate cause and effect so as to avoid a lawsuit, but any problems are between YOU AND YOUR DRIVER.

2. Don't expect your driver to make a side-trip off of his/her anticipated drive path. Have your seller meet them along the interstate.

3. Get your seller and driver together on a sked utilizing whatever means possible so that nobody has to sit at a gas station waiting for someone to show up that never does, or is an hour or so late. If your shipper misses his drop to your driver- you may not get a second chance! If your seller fails to meet the driver on sked or can't make the drop, it's up

to *you* to make other arrangements. We in amateur radio work on an honor system. Don't screw it up for everybody!

4. Meet your driver delivering your goods to correlate with his/her drive plan. Don't make him/her go out of the way to meet you! You're the one in the shipping predicament, *NOT* your driver! If your driver is going one state away from your location, perhaps you at least got the item from the "other" coast, and YOU will have to drive to meet them!

5. Understand that this list is in no way responsible if you trust the "wrong" person. There are schmucks in every walk of life. If they rip you off, you should seek help from the police, NOT FROM THIS LIST! (Except to inform the rest of us not to trust the jerk that ripped you off!)

6. Mis-scheduling on your part does NOT constitute you being ripped off! You should be willing and able to pay shipping for your item from your drivers destination back to your location if your paths fail to cross as scheduled. And keep in mind that you will be paying for UPS (or whomever) to come out to your drivers location with a "call tag" so it doesn't inconvenience your driver by having him locate and drop your package at a UPS drop point.

7. IN BIG CAPITAL LETTERS! THIS LIST IS IN NO WAY RESPONSIBLE FOR ANYTHING RELATED TO WHAT HAPPENS TO YOU AND IN NO WAY GUARANTEES THAT YOU WILL HAVE A PLEASURABLE EXPERIENCE WITH SHIPPING A PACKAGE OR THAT YOUR PACKAGE WILL EVEN ARRIVE VIA THE HAMTRANS NETWORK!!! IF YOU RECEIVE A BOX OF BRICKS INSTEAD OF THE RADIO YOU PAID FOR, THEY WILL BE YOUR BRICKS!!! THIS LIST IS NOT YOUR PERSONAL BABYSITTER! YOU ARE PRESUMED TO BE AN ADULT AND IT IS PRESUMED THAT YOU CAN TAKE CARE OF YOUR OWN PERSONAL AFFAIRS!

8. If you are dis-satisfied, SEE RULE NUMBER 7!!!

If you find this e-mail list interesting, you may subscribe to:

HamTrans@qth.net

As I am not well-versed in e-mail lists, even though I requested the creation of the list, I believe that to subscribe, you send an e-mail to:

majordomo@qth.net

with a subject line of:

SUBSCRIBE HAMTRANS

If someone else knows better, they can correct me. If you have comments, suggestions, or whatever, please remove the NO before the @ and the SPAM after the @ in my e-mail address to reply. E-mails sent without taking care of these two minor details will be bounced. If you can't figure out how to click and use your backspace key in the address box, you probably don't need to be reading this in the first place. Comments to the newsgroup may or may not be read by me. I'm a busy person.

73 all, and I wish you each a Happy Holiday Season!

Really!...not in Canada, one can guess why the restriction though...I think it's the Clipperton linear amp that has a choke in the final to prevent transmission around 10 meters somewheres (maybe the whole band?...)

Yes, it will, but it depends on your antenna, and the matching needs.
Just don't try to run a 10mtr dipole on 160 with it, at least not at a
KW or more.

Go back over your laptop's docs. If there *is* a NUMLOCK key,
there's some sort of 'weird' assignment of keytops.

On mine it is the 'stagger' of

7 8 9 7 8 9
U I O for: 4 5 6
J K L 1 2 3
M 0

Not very convenient, I'll grant you!

Jonesy

Source record: 58868

Hammarlund HQ-180A. Pay $609 for one on EBAY (3 days left!) or buy mine for $550.00 plus shipping.

This radio is cosmetically perfect with the following exceptions:

1. There is a very slight crease on the top left of the cabinet. It is perhaps .05 or .06" deep. It is virtually imperceptible upon casual observation. I became aware of it only upon running my hand along the edge of the radio.
2. There is a hairline scratch on the right side - perhaps 1.5 inches long.
3, There is a small scratch on the underside of the meter (not the face)

Electrically, the radio appears to play perfectly. The clock does not work. It may just need lubrication. The manual has been 3-hole punched, but is original. An original promotional flyer is included.

This radio looks brand new. Pictures available via email (large files!).

Thank you,
Jeff

Source record: 58803

In the old days I had to finally quit using my Heath VF-1 because of the OO notices. (Got a Knight VFO after that.)

I now have another VF-1, and I've settled it down a bit. Built it a regulated PS. Found a wire that had gone unsoldered for 40 years. Even found that a wire to the bandswitch for the 11 meter position was very sensitive to vibration, so I took it out. (Don't work much 11 ...)

Anyway, to answer your question, I'd say jumpy ones are bad, but slow drift ain't all that bad. Re-zero the other guy each time he makes a transmission. Let your VFO warm up a long time befor getting on. One thing I haven't tried--some guys say that using a much lower plate voltage helps a lot. Like on the VF-1, use 150 volts instead of 250. Of course if your VFO has a built in PS, that could be a hassle.

I use the VF-1 with my HT-40 and DX-35 (but not often enough). I also have a Drake 2NT, but haven't tried to VFO it.

Source record: 58805

First, I'm assuming the 75A-4 works sort of the same as the 51J-4.

If I remember correctly you have to apply a voltage to the mute terminals.
These terminals I think are connected to the coil of a relay inside the
receiver,
which pulls in and mutes the receiver. Or else it turns the AGC on hard.
Frankly, I don't remember.

You could use a set of auxiliary contacts on a dow key relay, or probably the
DX-100 gives you a dry set of relay contacts, to switch maybe 12 vdc or so.
Again I don't remember quite what voltage it takes to actually mute the
receiver.
If 12 vdc is enough, you could get it from small p/s, maybe even a wall wart.

Personally, I prefer to wear a pair of cans and listen to my transmitter
so I've not bothered to mute the receiver.

Hallicrafters model HT-37 SSB/AM/CW transmitter from the 1960's in good condition. All tubes check good. The 6146 finals and some capacitors were changed recently and it's getting full output. The front panel is very good. No dents, dings, mods, etc. It comes with a copy of the manual & schematic. The only problem to report is that it works on USB; but not LSB. Ask me for a picture! $250 plus s & h from Schenectady, NY

Pricing is very subjective. A lot depends on condition, accessories,
etc.. A good place to look is:

BONEYARD: Bry's Boneyard Radio Pricing Guide by AF4K

http://home.cfl.rr.com/happysurfer/ham/boneyard.htm

They show a listing for lots of rigs. Multiple prices are listed
because this data is just extracted from the actual selling prices.

SB-104A $125, 200
SB-104A w/SB-60A ps/spkr $100
SB-104A w/PS & VFO $275
SB-104A w/SB-604, SB-614, SB-634, SB-644 $500, 575

SX-117 $125, 150

An interesting note for the SB-104A is that there is one on EBay
right now that going for $750!!

I have a lot of REALLY GOOD USED TEST EQUIPMENT for sale, VERY reasonably priced, at

http://www.fullnet.com/u/tomg/gooteesu.htm

I have lots of Tektronix oscilloscopes of all types (JUST GOT 33 MORE!), lots of 7000 and 500 series plug-ins (JUST GOT 50 MORE!) and mainframes, Tek manuals, lots of Hewlett Packard (HP) equipment, General Radio items, and many other manufacturers' test equipment and accessories, including some tube tester units, curve tracers, spectrum analyzers, noise/distortion testers, signal generators, meters, power supplies, etc. I also have a varied selection of new electronic components and used vacuum tubes/valves.

The equipment is all inspected and tested (by an electrical engineer (me)) in detail, and working, before being sold. Cleaning and minor repairs may also be done. ALL EQUIPMENT HAS A MONEY-BACK, RIGHT-OF-RETURN GUARANTEE. Any defects or problems that I can find will be noted in each item's description.

I accept credit cards (through Paypal (it's free)), money orders, personal or company checks, cash, gold, ...

Don't like my prices? NO REASONABLE OFFERS WILL BE REFUSED! Please, take a look, right now.

Thanks, very much.

4516. "Hubcaps" for National Velvet Vernier dials?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-29 00:00:00 UTC
From: Richard Ferranti <ferranti@erg.sri.com>
Message-ID: <3A258831.BEEECE5D@erg.sri.com>
Source record: 58824
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Folks:

Seems that every time I run across an otherwise nice 1930's National Velvet Vernier dial (you know, the ones with the variable reduction ratio and an 0 -100 calibration like on an SW-3), the little decorative chrome "hubcap" that's pressed over the shaft bushing is missing. To compound matters, National made a larger and a smaller version of these dials (the larger one is on the SW-3; the smaller one is about 2/3 its size and lacks the variable reduction feature), and the hubcaps on both, of correspondingly different sizes, are inevitably gone. Like missing radio cabinet screws, knobs, tube shields, and socks, these little hubcaps seem to have disappeared into a black hole.

Any ideas on acceptable substitutes (using stuff from a hobby shop, hardware store, or even a sewing center?) or ideas on how to make a reproduction hubcap?

Thanks,

Rick WA6NCX

4517. Racal RA-17 panel refinishing available

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-11-29 00:00:00 UTC
From: Walt Novinger <wnovinger@nc.rr.com>
Message-ID: <zIfV5.6196$88.667657@typhoon.southeast.rr.com>
Source record: 58825
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Several months ago, I posted a note on the NGs indicating that a friend was developing a process to refinish front panels for the Racal RA-17 receiver. It took a couple of months to locate a source for the paint and to get an exact match for the Light Admiralty Gray color used on these receivers; it took another bit of time to get the silkscreen done to his satisfaction. I have just received the first refinished Racal RA-17 front panel, and can only say that the wait was definitely worth it! The panel looks like I imagine it did the day it left the factory. If you have a prized RA-17 that would benefit from a "face lift," I highly recommend this approach.

If you are interested, please contact Howard Mills (W3HM) at w3hm@nfis.com. The price that each panel will cost will be determined by the number of orders that Howard gets. Those of you who have had Howard work on your radios (he did an R-388 for me) know that he is meticulous and a perfectionist...you'll not be disappointed with his work. I have no interest in this service other than as a very satisfied customer and the very happy owner of the "guinea pig" first front panel :) Please contact Howard via email or on 304.876.6483 (0900-2200ET) with any questions.

Walt

FS: I have decided to sell both my HRO-50 receivers. Both are very
clean table models. One was on just a
year ago and works quite well and the other hasn't been on for 6
years and has been in dry storage. I have
6 coils between the two radios, including the bradcast band coil
AA. I also have a manual. Front panels on
both look very good, unmodified. I want $525 for the whole
lot..............Mike, WA5MOE, (979) 693-1461

The Johnson 122 VFO is one of the best I've used. They are very stable, key nicely and cover 160 meters. They do require an external power supply. The Knight VFO is much better than the VF-1 which is one of the poorest while the Heath HG-10 is quite stable. That Globe V10 really put out a strong signal. Once, I connected mine to the antenna via the tuner and had many good qso's. With a built in power supply and key jack it's really a complete transmitter minus the pi network output. Like you said, it is a drifter. 73

The other option is to bring up the Character Map application (in Accessories). You can then search for the character you want. Click on the character, then click on Select, then Copy. The character is now on the clipboard, and you can paste into your main application. Slower, but works fine.

Another comment on the VF-1. When I started working on mine, I found that when I adjusted the ceramic trimmers, the frequency hardly changed at all. On closer inspection, I saw that the silver stuff on the top wafer had changed into a black powder through some kind of chemical reaction. Maybe it was the solder the guy had used or maybe just reaction with the air. Replaced those trimmers and my ability to adjust came back.

It was kind of interesting going through that VFO, touching various points and applying gentle pressure with an insulated stick--to see where the really sensitive (mechanically) places were.

Message-ID: <905p3makg1@mailint03.im.hou.compaq.com>
Source record: 58747

I have for sale or trade a R106 HRO receiver and a Larkspur B70 radio-link installation.

The receiver has the original HRO tag and an additional English R-106 MKII tag on the front
The receiver is working fine and in good physical and electrical condition.
I have 2 coil packs for it, one for 80 and one for 40 meter.
Two negative remarks, the little bezel with around the AVC switch indicating AVC on/off is missing and the knob for the AF volume reads RF volume. Price 225US$. Price is including a homebrew power supply with build in speaker. If you don't want the power supply it will save on shipping cost.

The B70 is a Larkspur radio-link installation of the 1950's working in the GHz frequency range. The TRX is a small unit mounted on a tripod together with 2 small dishes. The set is complete in transit cases and with tripod, remote control unit, tester and cabling. Price 225US$.
prices excl. shipping cost

If interested in the above, I can email pictures.

I'm interested in swapping for Military H.F. manpack equipment.

I followed a link in the Hammarlund Historian web page to a manuals
link on this web page. It lead a web page
(http://www.qsl.net/hammarlund/hammanu.html) that indicated that
Charles Jedlicka is the source for manuals and included a list of
manuals available along with prices. I placed an order for a complete
set of manuals for $58.00. About a week later, I received my money
order along with a note form Mr. Jedlicka indicating that he no longer
has manuals for sale.

I have a HQ-180AC for which I have a copy of a manual for the HQ-180. The
HQ-180 doesn't have an octal connector on the rear of the chassis, so I have
no documentation to tell me what the pin connections are to various
functions. I would really like to be able to purchase a complete set
of manuals as advertised on the above web page, but I will gladly
settle for a copy of the schematic of the HQ-180AC. Does anyone know
where I can get a copy of the HQ-180AC manual? If not, can anyone tell
me where I can get a schematic for the HQ-180AC?

Thank you.

Looking for a Johnson Thunderbolt in the Albany, NY area. Would like the amp in working condition. Also any comments about this amp are more than welcome. I remember hearing these amps in the 60's and 70's and liked the way they "sounded".

Thanks,
Bill

Hi,
Boy, am I familiar with that rig. Used to work for SBE in the mid 70's, and repaired, and modified many of these. I at one time had 6-7 of the 36. Even had a matching VFO, and of course the power supply/speaker. I can remember buying them from SBE at $50.00 a piece. Once, I had located one of the only 2 existing amplifiers that matched these rigs. Was, more or less a copy of SB220 and Henry 5KD2. Today, the only SBE I have left, is a prototype SB3LA, linear. It was built in our engineering department, but never marketed. It is, a copy of the SB220, with some modifications to the ALC circuits. That was done to accomodate the SB35, that, also, was not ever put on the market.

Just thought you might be interested!

I picked up a VF-1 at a hamfest. Opened it up and realized I'd better start over. I basically disassembled it and rebuilt the thing from the schematic. It was fun - sort of like building a Heathkit. I ended up using a few more terminal strips than Heath did - I think my version ended up being a bit more mechanically stable. I used the thing with a DX-60B on 40 and 10 AM from Virginia. Haven't fired it up from this QTH (Azores) yet. I also used an old AMECO VFO when I was a kid. There were a lot of those things around. 73 Bill N2CQR CU2JL

I downloaded the font and installed it. Now my zero's are slashed!

Unfortunately, I have lost the ability to distinguish between

0 and ï¿½

They are exactly the same! I will never be able to read Norwegian
again! However, I couldn't read Norwegian before, so the impact
will probably be minimal.

Interestingly, some of the other programs I run that insist on using
fixed-width fonts, notably Not-GNU, don't recognize the font as having
that characteristic. I wonder if that's a Windows setup thing or is
there a bit set in the font file itself that tells everybody it is
is that way?

Cleaning out Excess BoatAnchors..
All prices plus shipping from ZIP 31523
Trades considered on all

E-Mail: dalite01@sprynet.com

==========

Lafayette HA-35 6m AM Transceiver, non-stock Meter, Stock Mic. Not Airchecked, appears to work. $40.00

==========

(2) Gonset Communicator III 2m AM. No Mics. Both appear functional, Not Air Checked $50.00 each

==========

Hammarlund FM-50a VHF High band FM Transceiver with Collins Hand Mic (PTT Knob Missing) and Power cord. Appears to work, Not Air Checked. Above Average Cosmetics. $110.00

==========

Hammarlund FM-60a VHF Low Band FM Transceiver. No Mic or Power Cord. Tested and to find bad Filter Cap (plenty of smoke helped isolate part, electrolyte leakage, considered repairable) $50.00

Willing to negotiate sale/trade on both units

==========

Ameco TX62 2/6m Transmitter. AM/CW. Internal fan added, needs cosmetic cleanup around hole in case top for fan. Hole is a clean cut, but fan blades are visible). Loads up and passes modulation on AM. Includes Manual Reprint. Fairly Clean with good paint and front panel, panel labeling. Overall Above Average cosmetics. Includes Radio Shack non amplified desk mic wired for use. $65.00

==========

CEI 901-2 VHF/UHF Receiver. Purchased needing repair. Found tuning linkage to be broken and a previous attempt to repair had allowed the linkage to short against selector switch. Replaced 5 of the 7587 Nuvistors (Replaces with NOS, not used) and restored operation. Needs proper linkage from one knob to VFO. Performance still not to specs, but rig appears to be worth repair and return to use. All stock appearing, with working metering. Original linkage damage appears to be from trauma to front panel, as the mount on the panel rear to the chassis is broken. It is a rack mount, and

the structure is still intact and functional, but will require some attention if it is to be subjected to rough handling or mounted in a rack and reliant on the front panel to chassis bond for the entire support. $100.00 (I paid $60.00 plus s/h for the Nuvistors; will include the old ones and a few new spares)

==========

Hallicrafters S-38E Receiver. Functional. Recently replaced caps to remove hum, no additional work done, other than to clean switches and controls. Bottom plate and back missing. Was stored in damp area and shows rust on chassis.
Case in average to below average shape. Receives on all bands. $35.00

==========

Also have a number of Tube CB rigs, vintage and collectable.

Trades invited on any Receivers, Scanners, VHF/UHF transceivers of current or recent vintage.

==========

Looking for:

Vintage 6m AM rig in good working condition
2m All Mode Transceiver
dual band mobile with crossband repeat

Willing to pay difference on more expensive items (within limits of my "Mad Money")

4568. TMC GPR-90 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-01 00:00:00 UTC
From: Larry <net1@netohio.com>
Message-ID: <dTRV5.35056$nh5.2341769@newsread1.prod.itd.earthlink.net>
Source record: 58779

As a wee tyke I remember seeing ads for the TMC GPR90 receiver. I always looked at them as the next step beyond Hammarlund and yet I'm not really sure if that's true. It appears that there is an outboard SSB adapter, so maybe it wasn't so hot as a SSB receiver but it sure looks neat.

Does any body have any experience with one or any feedback about them? How would they stack up to some of the Hammarlunds or possibly a 75A4?

Thanks,
Larry W9MDX

> is that way?

It's a property of the font, which a program has access to. For example, some of the outputs in EZNEC, like the tabular far field output, require a fixed font to be displayed properly. So when you open the "Set Font" dialog in this window, the program gives you only the fixed width fonts on your system to choose from. The property is surely embedded in the font file in some manner.

You're thinking of the TMC GSB-1 SSB adapter.
:
: Does any body have any experience with one or any feedback about them? How
: would they stack up to some of the Hammarlunds or possibly a 75A4?

My opinion:

I've used all three over the years. For general coverage AM/CW, get
the GPR90. For hamband only, the 75A4 with 3.1, 2.1, 0.5 KHz filters
is an excellent choice for SSB and CW. Both Collins and TMC gear are
built like brick outhouses. Never much cared for the Hammarlund stuff,
always thought it was just a notch above the stuff National sold - like
K-Mart vs Mervyn's.

If you can find one reasonably, I'd go for a Collins 51J-4 with all
mechanical filters.

See the TMC stuff at:
http://www.geocities.com/tmcvintage/index.html

Collins stuff at:
http://www.wa3key.com/collins.html

I imagine there's a Hammarlund site somewhere, but don't know the URL.

In my military days, a crazy 1Lt and I cranked up the base's TMC GPT-40K
transmitter up on 20M SSB into a rhombic pointed at Europe. The DL guy
in Germany refused to believe we were in the USA, we were so strong.
Needless to say, we didn't hang around long.

4578. Re: TMC GPR-90 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-01 00:00:00 UTC
From: wb0poz@prodigy.net
Message-ID: <909noi$116s$1@newssvr06-en0.news.prodigy.com>
Source record: 58789

Having had 5 or 6 GPR-90s and 91s over the years, I offer the following:

THe GPR-90 is a great performer as well as a real looker. Some radios just look *right*, the GPR-90 certainly has it. Some complain of cross-modulation problems but I haven't experienced that (certainly, just as many complain about cross-modulation on 75A4s). The GPR-90 won't have quite the stability of the 75A4 but it *does* have general coverage.

The GSB-1 SSB adaptor is rare and expensive (but not nearly as overvalued as the grossly overrated 75A4). It works well in SSB and offers nice bandspread. Caveat: see design flaw below.

Problems: The GPR-90's built in BFO is tacked into one of the IF amp tubes. Consequently, the IF signal feeds into the BFO oscillator which tries to phase lock itself to the incoming signal. So it's hard to get nice, smooth BFO adjustment near zero beat. Thought this was a dirty/sticky BFO variable cap 'til I looked at the workings with a scope.

The GSB-1's ANL tube creates a boatload of distortion even with the ANL off. Cure is to yank the 6AL5 ANL tube. AVC is a JS deal whereby a single tube feeds back on itself. Doesn't work too well.

Strengths: TMC's brick shithouse construction, while retaining relatively light weight. Extremely easy to service and get to all components. Never EVER seen a bypass crapacitor fail. In fact I don't remember replacing ANYTHING in any of the TMC receivers I've ever had.

Zeuss fasteners enable easy access to the innards. Audio is MUCH, MUCH better than any Collins ever made (Collins radios have their plusses but audio is definitely NOT one of them). Stabililty is great except near the top of 10 meters (and even then it's a hell of a lot better than any Hammarlund ever made). Super smooth tuning controls and velvety pots and shaft bearings.

All in all, an outstanding radio. If you don't mind paying the coin, you'll never be sorry. The only Hammarlund that comes within a lightyear of the GPR-90 is the SP-400 (and possibly the 600, but its weaknesses are many). HRO-60, *maybe* in the same league. Hallicrafters, only the SX-88 is in the ballpark. I like the GPR-90s a hell of a lot better than the Collins 51J series (again, the most irritating audio known to man).

Hope this helps. 73 John

I have a Jewell Set Analyzer for auction on ebay. Not only is it in wonderful condition, even the velvet liner looks great! It also WORKS!! Good for taking measurements on old tube rigs, take a look and see if you're interested.

here is the link:

Everything has been sold, EXCEPT for the Heath HP-23A

I also have a SWAN 117XC power supply for $65.00
(Needs paint but works OK.)

Heath HP-23A power supply in excellent shape. Works great with Heath
and even Collins rigs. Will sell for... $85.00
((This is the one which works right with the Collins gear!))

New Terminal Boards for sale - great for homebrewing,
radio & amplifier repairs etc.

These have turrets on phenolic boards with 4 mounting holes.

I have the terminal board pictures on a web page:

http://home.cfl.rr.com/happysurfer/boards.htm

There are three different sizes available.

Single sections are $1.00 each plus shipping.

Remove the 'NOSPAM' to e-mail me!

4597. Octal socket for end of cable

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-02 00:00:00 UTC
From: Frank Grigaliunas <fgrig@iea.com>
Message-ID: <B4aW5.597$T02.29485@sjc-read.news.verio.net>
Source record: 58708

Anybody know where I can get the female version of this:
http://www.iea.com/~fgrig/plug.JPG ?
I have an Elmac transmitter, and has essentially the base of a tube sticking out of the side of it for a power input. I got the plug in the picture to use on the power supply side of the cable, but I need a female version for the transmitter side.
I'm ready to use a regular octal socket and some epoxy, but it would look nicer if I could find a real plug designed for the job.

Thanks for any help

Frank, AB7YT

Message-ID: <3A295705.4FACAC63@email.sps.mot.com>
Source record: 58716

I am looking for very old crystals (or unusual types of crystals).
The frequencies do NOT need to be in the amatuer radio bands.

Of particular interest are:

pre-WWII crystals

German, Japanese, French, and British crystals from WWII

the following WWII U.S. military types
DC-1, DC-2, DC-3, DC-4, DC-13, DC-14, DC-17, DC-19, DC-21, CR-6

anything made by General Radio or the Bell Telephone Laboratories

crystals made by the following manufacturers
Bangor Electronics Industries, H. P. Brake Inc.,
California Electronics Corp., Chicago Crystal Products Co.,
Commercial Crystal Co., Commercial Equipment Co.,
Connecticut Telephone & Electric Corp., Crystal Engineering Co.,
Dallons Laboratories, L. A. Dow, Eidsonís, Electrical Products Corp.,
Electronic Industries, Federal Engineering Co., Federal Tele. & Radio,
Florida Aircraft Radio Corp., Franklin Transformer Manufacturing Co.,
Frequency Measuring Service, General Crystal Corp.,
General Electronics Co., General Piezo Co., Hearing Aid Laboratory,
Hollister Crystal Co., Kemlite Laboratories, Midwest Crystal Co.,
August E. Miller, National Scientific Products Co.,
National Technical Laboratory, R. N. Nebel, Laboratory,
Pacific Radio Crystal Co., Pennsylvania Crystal Co.,
Quartz Crystal Corporation of America, Quartz Products of New York,
Radell Corp., Reeves Sound Laboratories, Inc., Sepp-Eastwood Corp.,
Standard Coil Products Co., V-Precision Instrument Co.,
Wenkstern-Hasley, White Equipment Co., Wilcox Electric,
Wynne Precision Co.,

very low frequency crystals (i.e. < 5 kHz)

crystals that were built for broadcast radio/TV stations

very high precision crystals (usually in a glass enclosure)

special purpose (i.e. mechanical stress transducer, etc.)

non-quartz crystals (ADT, KDT, tourmaline, Rochelle Salts)

I already own most of the more common types (FT-243, HC-6/U, etc.) so I am
only looking for those which are unusually old, unique, or non-U.S. made.

One particular crystal/holder of interest is the General Radio 276-A crystal and the 356 holder.

I am also looking for old books, manuals, early crystal documentation (manufacturer□s catalogs, etc.), etc. Again, I have most of the more common materials (QST, Buchannan□s book, Bliley EB6, etc.), but items published before 1945 could be of interest.

Of particular interest are the 62 (or so) mimeographed bulletins, entitled "The Crystal Round Table", which were published by the Galvin Manufacturing Company of Chicago, Illinois during WWII.

Source record: 58717

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=508118378

Too many radios, too little time. I picked this radio up at a hamfest about three years ago, and I just haven't gotten around to working on it. I really liked the styling of the radio, and I found out that it didn't work too badly, either. I've used it on AM phone on 80 and 40, and SSB on all bands except 6 meters. But the bench has to be cleared off, so this radio has to go.

"This efficient Amateur band receiver provides outstanding reception on the 80, 40, 20, 15, 10, and 6 meter Ham bands. Has excellent sensitivity and signal-to-noise ratio on all bands, including 6 meters. Each of the bands covered are separately viewable on a large, drum-type scale.

'The G-63 features dual conversion for high image rejection. Multiple-bandpass tuned circuits in the second IF provide optimum shaping of the selectivity curve. A new peaking-type "Q" multiplier provides variable bandwidth down to near 100 cycles. Has tow second detectors - a diode detector for AM, and a product detector for SSB and CW reception. High-frequency and beat oscillators are temperature-compensated to assure extremely high stability.

'Other features include: automatic noise limiter; AVC; and "S" meter. Tube complement: 6BZ6 RF Amplifier; 6U8A 1st converter/HF oscillator; 6BE6 2nd converter; 2-6BA6 IF amplifiers; 6AL5 AM detector/AVC/ANL; 6BE6 product detector/BFO; 12AX7 AF/"Q" multiplier; 6AQ5 output; 5Y3GT rectifier; and OB2 voltage regulator.

'In gun-metal finish with aluminum panel. 8 x 16 1/4 x 10 1/2 ".

Message-ID: <20001201203919.08022.00000058@nso-mg.aol.com>
Source record: 58694

In article <9020vl$i87$1@ostrich.cybercomm.net>, "David Edwards"
<ham@cybercomm.net> writes:

>What have been your experiences???

(with VFOs)

Well....

First one I ever had was the VF-1. It was mint (this was 30 years ago!) but setting it was tough and it drifted, even on 80 meters. It was also affected by varying loads - I had to build a buffer stage to keep it from chirping!

Used various modified Command Set (ARC-5) transmitters as VFOs for a while. They worked well, but required lots of conversion.

The HG-10B is about the best of the bunch, but they are expensive and use an odd tube.

The EFJ 122 is really good, too. Stable (if the resistors are good), nice dial, lots of drive. Used one with a Viking 2 for my first and only 160 meter QSO back in 1996 (but that's a different story...)

The best solution I've found to the VFO problem is to build one. The best simple design is one by Lew McCoy, W1ICP, in the article "An Easy To Build VFO" (QST, February 1962). It's, based on an earlier article by George Hanchett, W2YM.
The Hanchett 12AU7A VFO circuit is extremely stable if built correctly - it's what I use in my current rigs. I first built a copy of this VFO about 20 years ago, and it sold me on the circuit.

The W1ICP design uses a 12AU7A Colpitts/cathode follower, feeding a 6AU6 buffer/multiplier. Plenty of drive and no hard-to-get parts except maybe the Miniductor - and there are lots of subs for that. The original design was for 80 meters, but by doubling all of the tuning L's and C's you can hit 160 easy. Reduce by 80% for 5 MHz. Bandspread can be whatever you want. Dial is linear with a straight-line-capacitance variable.

If you can dig up an ARC-5 xmtr tuing cap, try this trick: Make the main tuning range 1.75 - 2.540 Mc., and the 6AU6 output tank 1.75 - 5.1 or so. You can cover 160 thru 30 with good bandspread and stability.

If you don't like the 12AU7/6AU6 combo, 6SN7 and 6SJ7 should do the job.

--
Also had great success with a simple 6SK7 as a Hartley. I use junker ARC-5 txs, cutting the chassis just in front of the oscillator compartment and bolting on the front panel. (Purists are screaming in horror, but I only did this to txs

that were beyond restoration). The trick is to run the grid circuit at half frequency, and the plate circuit at the desired frequency. I used BC-457s and BC-458s, padding the grid circuit down to 2.5 Mc. with lots of silver-mica uufds to get a 5 Mc. VFO for a heterodyne rig. Used the original oscillator coil and padder, and the amplifier tuning cap. Circuit is just like the original 1626, except it's the classic electron-coupled pentode with tuned plate circuit. Even ran the heater juice through the coil, like in the ARC-5 circuit. Suppressor is grounded, not connected to the cathode. Screen at 105 or 150 regulated and plate at 200-250 does the trick.

Sure, you need some VR tubes, but only a few. Properly cared for, they last almost forever.

btw, DON'T pull plates from those precious breadslicers to get more bandspread. Just use a series silver-mica to cut down the delta-C.

I gave up xtals when I got my upgraded from Novice in 1968. With a few exceptions, the inexpensive BA VFOs aren't worth the grief. A decent glowbug VFO for HF is so easy I'm not going back!

Source record: 58644

Hello,
Name here is Joe, in Pa. Could anyone tell me the jumper connections on
the 11 terminal strip for a CE 20A TX? I have a manual for it but can't make
sense of the terminal strip information.
I can get the TX to key the relay, all tubes test good, but the "magic eye"
tube won't indicate RF and I get no RF output from the transmitter.

Any information will be greatly appreciated. Please send all replies directly
to my email address: yardleyite@aol.com.

Thank you for reading this and 73 de Joe Cro N3IBX

From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <90ekb5lcv2@plutonium.btinternet.com>
Source record: 58656

Dear NewsGroup Readers,

Now available for the use and entertainment of armchair PA linear designers. To professionals and amateurs alike, all at the same ridiculous low price.

******** Program PI_TANK.exe ********

Input data : Frequency, RF power output, peak RF plate volts, external load resistance, phase shift through network, Q of coil.

Output data : Values of C1, C2 and L, reactances of C1 and C2, resistance of plate load, efficiency, watts lost in coil, network Q, Bandwidths at the 1dB and 3dB points, network rejection in dB of 2nd, 3rd and 4th harmonics.

Usual facilities available for sweeping input data over wide ranges in fine increments.

Will unbelievers please note that the internal resistance of the PA device is not needed.

Program PI_TANK proves that the ARRL Handbook table of C1, C2, L values for PA pi-match networks are accurate to within +/- 10% or better.

Fully tested before issue. No beta testing in this house.

Only 44 Kilobytes. Download PI_TANK in a few seconds from website below. Run immediately.

From: RttyMan <jlockett@onemain.com>
Message-ID: <xdEW5.830$hG6.368155@nntp2.onemain.com>
Source record: 58659

Approximately two and a half sets of 'tubsters' for the Collins S-line. These are solid state tube replacements for the tubes in the S-line both receiver and transmitters.. They just plug in, no modifications to the rig required. They come with a full set of documentation. These were all removed from a couple sets of 75S3C's that I had and sold. There are enough spares to outfit most of the tubes in a receiver and matching transmitter except for the driver and finals.. I never used them in my transmitters but they worked perfect in my receivers..They were all working when I changed the rigs back to tubes before I sold them..These units allowed instant on, almost no heat, and did away with most all the alignment problems that come after running tubes for some time..

I will ship these 'solid state tubes' qty. 34, and the documentation for $225.00 anywhere in the USA...

4642. Racal RA17L Help Required

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-03 00:00:00 UTC
From: Adrian <adrian.j.reynolds@lineone.net>
Message-ID: <3a2a5199@news-uk.onetel.net.uk>
Source record: 58664

Dear All

Is there anyone who has had experience of the audio output on an RA17 (or any tube driven kit - I suspect this is not confined to Racal) of the audio output suddenly dropping after about an hour of use?

In my case - the volume drops to about half its usual level. Happens every time after about the same time so I suspect something is getting hot and changing its value.

Any ideas, pointers help etc much appreciated.

Adrian

To answer a number of inquiries I'd like to add the following.

The panels are in excellent condition. I hate to use the words "mint" or "pristine" but there are no scratches, gouges, dings, dents, scrapes, etc. Even though I have bi-focals, I looked closely at the panels and shined a flashlight on them at various angles.

If the highest bid is not above the reserve price, I will not sell them for that price, which is in accordance with Ebay policies. In such a case I'm going to leave them covered on my shelf, and peek every now and then to admire them, hi.

Also, the reserve prices on these items, while not "give-away", are below what the selling prices for similar items have been on Ebay plus my units are in much better cosmetic condition.

So if you or your XYL would like to treat you to a present you won't forget, just go to Ebay and look up L4B, C4, etc.

Thanks again for all the inquiries and nice comments that have been sent.

73s,

Evan

Greetings!

I am upgrading to an SB-220 and am offering up my ol' SB-201 for sale or trade. Amp needs work. It was working fine and putting out 650 watts when something 'popped' last week towards the bottom of the amp and she stopped working. Still showing 2,100 on the HV meter, and I think the tubes are still good. I truly believe it is a simple problem for someone more adept than me. I haven't even taken the cover off and looked. I would prefer a local pickup or will deliver within a reasonable distance for a decent offer. Would take older HF gear in trade or sell for ??? This one has been modified for 10 meter operation. E-mail me with any offers, whether trade or cash.

According to Sibley's "Tube Lore", the SS-501 is an "Argon U-shaped
control
tube", AKA R7061. No idea as to it's intended application--perhaps a
thyratron
driver for radar or something?

This is the second one of these I have seen on Ebay in as many days.
Someone
else has a NOS one available, and he has a photo of what it looks like
when
energized from a tesla coil--pretty neat!

4676. SP-600 found. What kind lf value are we talking?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-04 00:00:00 UTC
From: Steve M <steve4810@seeyouonline.com>
Message-ID: <4AYW5.97$7M1.1779@newsfeed.slurp.net>
Source record: 58685

Got around to cleaning my garage a few months ago and ran across an SP-600 I forgot I had. Picked it up at a surplus sale back in the mid 60's while I was shipping out of the 32nd St Naval Station in San Diego (I was an FTM, not any kind or RM or ET but enjoyed SWL as a kid and teen).

I used it a few times just after I got it and once or twice again six or seven years later when it surfaced during a move.

Now I'm afraid the tuning gear train is somewhat corroded and turning the tuning knob won't move the condensers or the dial.

Q1. What kind of value are we talking, as is? What about if it's cleaned up and verified in working order?

Q2. Can anyone give a a tip or two on how to crack open the gear train so I can clean the rust (on the gears only, I'm not THAT dumb!) and lubricate it so it tunes like it used to?

Q3. Does everybody hate me for admitting to letting a totally choice anchor like this rust away in my garage for so many years?

I'm torn between cleaning it up,running a long wire across the backyard and firing it up -OR- taking bids on ebay or where ever and turning it into cash for getting some of my newer hobby's stuff like an equatorial mount telescope or an P4 CPU and motherboard. I've got a lot more interests and time than money (And that's putting it mildly!)

Steve in San Diego

In your history of the R.L. Drake company, you say Drake got out of
the amateur radio business in 1984 because "the bottom fell out of the
market" or something to that effect.

Could you amplify on that thought? Did a bunch of hams suddenly die?
Did Drake's sales simply fall into nothingness? Just curious...

We are a nautical shop in Spain.We have all type of items about sea world: clothes, decoration, nautical accesories, etc...You can see this in our online catalogue, that it was actualized one or two times for week. We have out of catalogue nautical antiquitys coming from shipwrecks (binnacles, portholes, etc..). We also can offer ship models at scale from a big quality, excelent scale reproductions of trade ships (containers, tugs, etc..). We can make proform invoice of a ship you want. We only need planes, photos and at what scale you wish it.
You can send your mesajes or suggestion to.
Sorry for our english, but we do not speak it so well. If you see a defect of traslation in our web, you can tell to us indicatmy the reference of the item, and the conect form to write.
thanks

To those interested in who I am referring to in my mention of the crystal supplier I recommend in the above posting it is Petersen Radio Co., Inc. 2735 Avenue "A" Council Bluffs, IA 51501. (712) 323-7539. He prefers you email him your order and he will send you a bill with the crystals. (Just like the good 'ol days before we all became so paranoid about things !!!). Every time I have ordered crystals from him I have had the crystals IN MY HAND within three days (no kiddin') of sending him my email. One more thing, although he no longer does FT-243s, he does do HC6/U with a 0.093 inch sleeve on the pins. Be sure to request that if you are fitting into an old '243 socket. Good luck and see you on 3550 X!

For Sale:

Heath HW100 Parts rig...missing 6CB6, 6GW8, meter cover.
Finals ARE in place (don't know how good they are anymore..hasn't been
on air in over 10 years.)
It's not pretty, and it's dusty, but it's otherwise complete I think.

Also have an HP23B power supply also.
Just checked it. Does about 775 no load on the HV
-130 is OK, LV is about 260 and 320 no load. Filament supply
works too. Lights the tubes that are left. HI.

And and HP13A that has been used in the past and I believe to work.

No guarantees on any of this stuff, but I think the power supplies are
both fine. I've used them both quite a bit in the past.

Ideally, I'd like an offer on the whole lot, but will
seperate if I can find buyers.
Shipping will be actual cost via method of your choice.

I posted this about a month ago, had a few responses and
and had a hard drive crash, so I don't know who responded.

If it was you, please get back to me. I apologize.

Make me an offer. Looking for a good home.
Email with any questions.

Source record: 58596

Hi Guys;
This Drake TR-7 transceiver is got to be one of the best rigs ever made here in the USA. Please be advised that this is for TR-7 ONLY, the supply has been sold. It covers from 160 to 10 meters, although the warc bands have not been activated yet, the S/N is 2190. Maybe this means that it has'nt been "fiddled" with yet? It also has general coverage receive from 1.5 to 30 mhz. It comes with the original manual and I have tested it and it seems fine with full output! Works on USB, LSB, CW, AM, RTTY modes. Here is a list of the Options:
300 hz CW Filter #5.645-300/8.
500 hz CW Filter #5.645-500/8.
6 KHZ AM filter #5.645-6khz/8.
All by Network Sceinces Inc.
AUX-7 Board.
It is in Excellent condition except for the early "Gummy" type of cover that Drake supplied.
I have heard other TR-7's operate on AM and I must say, they have the best AM of any Solid State rig that i've ever heard.
Price $450 plus UPS!
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

standard.

... I'm sorry but I really have to take issue with this. The typical oscillator can used in digital/computer systems has, at best, a 50ppm tolerance. I would certainly not call that a "good" standard. I assume the 8640B/opt323 at least has a counter, and the timebase for that counter is undoubtedly capable of quite a bit better than 50ppm when it's warmed up. If I remember correctly, the opt323 deletes the phase locking, and if that's the case, of course the osc will drift some. I've heard of folk adding the circuits to do the phase locking, and that seems worthwhile if you want good stability over time.

If receiving WWV is a problem, one might consider seeing if Douglas Dwyer (who has posted here in the past, I believe, or at least over on sci.electronics.design) still has inexpensive surplus high quality oscillators available. A "deja" search should find him easily. According to what NIST publishes, you shouldn't count on doing better than about 0.1ppm with WWV, but my experience with an 8640M (with oven-controlled oscillator) is that it's not stable to much better than that anyway.

Cheers,
Tom

Message-ID: <3a2e9e2b.441365149@news.tamu.edu>
Source record: 58556

FS: I have a 6' tall shipboard Navy WWII transmitter for sale. Built
by Federal Telephone and Telegraph it
covers 2-24 Mhz and uses a couple of 813's for final output tubes.
There is a slot in the middle of the
transmitter for a 10 1/2" tall 19" rackmount receiver. I currently
have my SP-600JX in that slot but the
receiver is not for sale. I can let the original receiver (untested
SP-200) go with the transmitter for a
nominal additional cost. There is a little desk on the front of the
transmitter to copy CW messages, etc. The
transmitter was in service when I took it out of service about 1
1/2 years ago. The power supplies in the
bottom of the transmitter are nice homebrew supplies that replaced
the original shipboard dynamotor
supplies. I have a pix that I can e-mail to serious inquiries only.
There is a manual for the transmitter also. I
want $550 for the transmitter. Mike, (979) 693-1461 eves and
weekends or email to: gspubl@tca.net

4735. FS: FT101 160 - 6 Package !!!

I have a Yaesu Ft101ex with speech processor, AM filter, xtals for 160 thru
10 -- plus 17 meters (I used 10C for the custom 17 meter xtals) !!!!!!
Also have the SPECTRONICS DIGITAL READOUT and the FTV650B 6 meter
transverter with a 2201 (6146B) final . Copies of all manuals AND the FT101
FACTORY SERVICE MANUAL. Some FOX TANGO articles. No manual for the readout
(IT works great -- I
like it better than the FC601 - it has the built in sideband offset) I do
not wish to break the rig it up !!! Everything is in very good condition
and
EVERYTHING works fine. The leather handle on the 101 is dry
and the cord on the readout has a piece of tape on it.
Asking $ 430.00 for everything --- buyer pays shipping.

Get it before it goes on EBAY !!

Pics available -- about 1 megs worth. !!

Hi,

I found a strange valve in a large box with valves I got from the from
the Army.
It is about 9 cm long, the base is 2 cm diameter. It has a very small
4-pin base which looks like the heater connection.
The coding is BT 860 Beam Tube Corp. Made in USA 7246 B5593
Looks like a small power UHF/SHF triode.
I can't find it in my books. Can anyone help?

Regards,

Arnold Goks&#65533;yr

I too have an 8640B-323. Do you have any idea where I can find info
on adding the phase-lock ciruit used in the commercial version?

Does anyone have a manual for the commercial 8640B who could copy the
schematic(s) of the phase-lock circuit? That might be a good starting
point.

It sounds as if your 1st conversion oscillator is intermittent. It could be a dirty bandswitch. Another thing you might check would be the bypass caps; sometimes they get old, and don't put things at AC ground, the way they are supposed to. I don't know if your 1st oscillator is taking the output off the plate or the cathode.

Message-ID: <90ldfe$8d$1@news.dpc.net>
Source record: 58638

Hi everyone here is our plan for tonight's First Wednesday CCA AM night on 3885kcs. We are trying this approach since we had problems hearing the coast's from the Midwest last time. Ncs does not have to be in your region for you to checkin. Everyone is welcome no matter what gear you are using.

Please direct any and all comments directly to wa9vrh@ocslink.com

We will have 4 main ncs. One on the East coast, Midwest, Mountain area, and West coast. The main ncs will have others in their area helping with their hour. (Please note ONE HOUR). At the end of their hour the main ncs for that region will contact the next regions ncs and turn ncs over to them etc. etc. etc.

Each ncs will start at 08:00pm in their time zone.

Starting at 8:00pm EST (0100 UTC) East coast ncs will start the net
At 02:00 UTC East coast ncs will turn ncs to Midwest ncs
At 03:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 04:00 UTC Mountain ncs will turn ncs to West coast ncs

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

Since the tarnish on sliver is usually silver sulfide - if you can get an aluminum pan & fully immerse the coil in it with a water/baking soda (sodium bicarbonate) mixture, it will reduce the silver sulfide to metallic silver (no loss for your coil!).

Evan, try a teaspoon of salt mixed with the juice of a lemon, wipe it on
with a cotton ball and rinse thoroughly with warm water. It's dilute
hydrochloric acid. I've used it on brass, copper and silver and it works
pretty good but you have to get it all off when you're finished.

Scotts suggestion is a good one to use as a standard.

The 4 pin oscillators used on computer system boards are a good standard. Digikey and Mouser have test circuits in their catalog listings. you can use a rolled collet IC socket with the un-needed pins removed and a zif socket to make a quick change frequency standard generator.

Old loran C units usually have a very accurate 10 mHz oscillator, and it can be easily used by taking a hacksaw blade and cutting the section of the circuit board loose, mounting some rubber feet, supplying input voltage and output connector.

I also have a 8640b Opt 323. It is a good unit, but doesn't have the high stability option, and can drift until warmed up. Ambient temperature in the operating environment can extend the warm up time. Even after warm-up it may still have a tendency to drift.

Component aging could be a factor, and will call for continued "correction" until they fail completely. Replacing the failing component may result in no alignment needed, and would be the best approach if isolation is possible for replacement.

How big is the manual (in terms of pages), and where did you get it? I may have to undertake the same process you are looking to one of these days.....

I have decided to sell out right my Heath SB200 previously listed
for trade only. The amp works well, no scratches with manual.
$300 plus shipping, prefer PU in Michigan.
Consider partial or full trade for a Hallicrafters SX16,SX17, SX23 or
similar pre-war rx in good working condition

I do have a manual...don't recall if it's for the 8640B or 8640M, but I believe the M is essentially just a repackage of the full-blown B. There's almost certainly a B manual around here, too. I contacted a friend who I thought had added phase locking to his 8640Bopt323, but turns out he had found non-braindead 8640B's so never did it. I'm willing to do some manual photocopying, and if there are several folk interested, the copying could be a lot more efficient than if it's just one-off.

Cheers,
Tom

4772. funky S-meter in Hallicrafters SX-28?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-07 00:00:00 UTC
From: Phil Nelson <philnelson@antiqueradio.org>
Message-ID: <GRUX5.143255$w61.105636@dfw-read.news.verio.net>
Source record: 58581
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I'm working on my second SX-28, and its S-meter looks different than my first one.

Here's the meter in my restored SX-28:

http://www.accessone.com/~philn/art/28meter1.jpg

Here's the second one:

http://www.accessone.com/~philn/art/28meter2.jpg

The numbers and hash marks are bigger on the second meter, and it has a big letter "S" over the words "carrier level." Someone also wound friction tape around the case behind the panel, making me suspect monkeybusiness in mounting it. (Haven't gotten around to peeling the tape off yet.)

It also doesn't work correctly yet, but since I am reading around 260 (!) volts at the meter terminals rather than the expected 17 or so, that would probably be the case even with the right meter. Haven't gotten very far in investigating this anomaly, other than checking the 27K dropping resistor R30 and meter adjust pot R29, both of which are fine.

Do you think this is a substitute meter (possibly hotwired to make work)? Or were there cosmetic changes in the SX-28 meter dial?

Cheers.

Phil - dunno about the SX-28, but I have seen different meters in various samples of the SX-42. Had 2 - one a parts radio, the other nice except the meter scale was buggered up. I forget now what was different about them but IIRC the scales were no interchangeable, nor were the meters (?).

Good luck on that old buzzard radio... 73 John

Phil,
If you pull that tape off I bet you will find the pot metal meter case has split about every half inch. I found this with a sx28a I restored a couple years ago. IIRC I found a similar meter and swapped out the movement.

Heck, if that's the problem, it sounds like a job for duct tape! Wind on
another two or three layers and she should be good for another fifty years
at least :-)

Seriously, thx for the suggestion about swapping movements. Wouldn't have
thought of that. (Now, when's that next swap meet scheduled?)

Cheers.

Source record: 58572

I have a couple of BC-342-N that have the same problem. R11 burns up with power applied. C37 checks out fine, so I think it is C39 inside the 1st Det can. Checking the power input lead to the can shows 0 ohms. There's the problem.

How do I get to C39 inside the can? After looking at it for too long, I convinced myself that I pretty much have to disassemble the "whole" radio to get at this cap.

Anyone know a short cut way of getting to this cap?

My Christmas project is to get all my 342s back on the air.

TIA,

Steve.

Rene:

We have the same problem in some of the digital modes used in ham radio, like AMTOR, where the @ symbol is not defined in the character set. In those cases we just spell it out (at) and assume the people who read the e-mail address will know to use the symbol instead of the word. Perhaps someone will come up with something better.

Phil, both meter cases in my SX28 and my SX28A looked like someone dropped a cherry bomb in them. I learned on the boatanchor group that this was a very common problem in these radios. Still looking for a good way to seal up the meters since having dust or metal filings get in is asking for trouble.

Can someone tell me what the voltage should be, on the first plate of the first stage of the speech amp in a B&W 5100B? This would be pin 1 of the triode section of the 6U8.

The overall modulation level output is low, and the plate voltage in the 6U8 is reading 39 volts in the triode (V401A) and about 250 VDC on the plate in the pentode section, V401B.
Also, would anyone have a voltage chart for this rig?

Thanks.

4818. Re: funky S-meter in Hallicrafters SX-28?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-09 02:59:08 UTC
From: Phil Nelson <philnelson@antiqueradio.org>
Message-ID: <ydhY5.148226$w61.111182@dfw-read.news.verio.net>
Source record: 58521
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Just to close the loop, a couple of SX-28A owners have emailed me to advise that the 2nd ("funky") meter is exactly what they have in their sets. So I guess I can quit worrying about whether the meter is kosher, and start worrying about how to permanently seal its friction-taped case.

Thanks as usual for the timely & expert advice.

Happy holidays.

I have (more or less) the following parts from a Racal RA-117. Prices
are entirely negotiable, if you need several parts.
Top cover ($20)
S-meter ($25)
Knobs (usable, main tuning/band $9 ea. , smaller ones, $4 ea.)
Front panel (entirely usable, some fading of color, markings OK, but 2
spots of surf. corr., inquire) ($20)
Dial Tape ($30)
Power Transformer ($40)
Choke ($20)
Output Transformer(s) ($15)
"Modules" (?)
"Cans" (?)
Function Switch ($10 not cleaned up, though)
Toggle Switches ($3)
Mechanical contrivances (whatever)
Side panel (1 only) (?)

The cast chassis, itself, is not available.

Bob,

I have lots of coils for the older HRO's, black wrinkle with handles

I have an extra JB and JD coil. In a week or so when I get my
"new" HRO I will have an extra set of 50-100, 100-180, 180-430 and
0.9-2.05
coils.

I would like $30 for the JD or JB coils, $50 for the LF coils and $80
for the 0.9-2.05 mhz
coils, plus postage.

Thanks

George

Source record: 58536
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is a very nice, clean original Johnson Matchbox, model 250-23.
It has a couple of minor scratches on the side of the cabinet but the
front is unscratched. This model does not have the built-in SWR meter
and coupler. It is strictly as original - no modifications! As
designed the "Matchbox" was for tuning balanced feed lines like open
wire line or a random long wire antenna. There was no coaxial cable
output. Many of these Matchboxes were modified to accomodate an
unbalanced output (coaxial cable).

I am asking $125.00 plus UPS for this fine piece. If interested
please reply by e-mail.

This is an oldie but a goodie from the 1960s! Mobile hams of the era liked these continuously tunable helically wound HF antennas as they were easily tuned to any frequency between 3.5 and 30.00 MHz. They are pretty scarce these days. Today's "screwdriver" antennas work the same way (and cost a lot more) except the Band Spanner is manually operated. This ine is in excellent condition and should be cleaned as it is a bit stiff from the years in storage. I have some documentation with it.

I am asking $150.00 plus shipping for it. If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

This is another project that I'll probably never get to......

This radio is quite clean and will probably take little effort to bring back into useful service. Cosmetically it is very good but the hinged cover needs a bit of TLC. Electrically it is unknown as I do not have the facilities to test it. For an external 12VDC power supply to be usable it requires a 3/16" tip telephone plug which I don't have so I cannot power it up. I don't know much about this radio and so I feel it would be better off in the hands of someone who does.

I would like to get $100.00 plus shipping for it. I have seen other examples sell for $200 and up on ePay and other auction sites. If interested please reply by e-mail.

Coredially,

Michael Crestohl
mc@sover.net

True, the bandspanners were and are *good* antennas. However, the
screwdrivers will outperform the bandspanner because of its ability
to be adjusted easily to compensate for its surroundings. You are saying
that the screwdrivers are *more* expensive. I make 'em for about $50
more than you are asking for the bandspanner--and that includes shipping
to lower 48 states! Surely that $50 is worth the extra performance and
not having to stop everytime you want to change bands. Try putting
700 watts on a bandspanner--mine will handle that and more.

I wish you success in your sale. The Bandspanner IS a good antenna--
I just sold one for far less. I had many years of use out of one.

Best 73

Message-ID: <20001210003556.03259.00001309@ng-ma1.aol.com>
Source record: 58452

Oddly enough, even the B&W manual doesn't have a voltage chart for the 5100-B (although it does for the matching 51SB-B SSB generator.

However, the Service Manual says the following for low modulation percentage:

"Transmitter operates normal with adequate drive on AM and CW. Loads properly, but reports indicate lack of modulation on signal. Check capacitor (C516) located on underside of chassis inside of shield covering the terminal leads on TB501. Capacitor C516 is electrically connected across secondary of modulation transformer (T2), but physically connected to terminals 4 and 7 of TB501 terminal strip. Remove and replace this unit with two 100K 2-watt composite type resistors connected in parallel to form an assembly of 50,000 ohms in value at a rating of 4 watts. This assembly to be connected in place of C516."

I hope that's helpful.

Hi!

The thing is that my father has an old Hammarlund Super Pro SP-400X from 1948 that someone has made an offer to buy. I just want to make sure that he does not sell it for less than it is worth.

All dials are in good/mint condition and the whole receiver is fully operational including meters. The paintwork on the front is intact and original, but the sides, back, top and bottom has been repainted due to wear and tear.

So the question is, how much is it worth? An educated guess will work fine.

Many thanks in advance =)

What current rating on the coil?

You are more likely to find 500 ohms at 10 watts.

Hi All,
A few weeks ago someone posted a want for dead, but intact 3-500 Z tubes,
probably for display or lamps.

I have 7 3-500Z tubes, all in good cosmetic shape.

The person who wanted them, please contact me at my email below.

Regards,
Jeff Weinberg

4872. Gonset GSB-100 low output on 20M

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-11 04:28:59 UTC
From: George Curtis <gdcurtis@home.net>
Message-ID: <fKYY5.13567$M5.552539@news1.frmt1.sfba.home.com>
Source record: 58476

Anyone have any experience working on the GSB-100 transmitter. I am restoring one and it seems to have low power output on 20M. I suspect that it has to do with the VFO (a 12AU7A). Bringing up the VFO's oscillators plate voltage from 54V to around 95V seems to correct it, but I am wondering why Gonset spec-ed it a 54V.

4873. Wanted: Manual for Heath SA-2060A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-11 13:37:48 UTC
From: k5dh@raytheon.com
Message-ID: <MM4Z5.47$mz3.661@dfw-service2.ext.raytheon.com>

Looking for a manual for a Heath SA-2060A antenna tuner.
A good photocopy would be fine. Yes, I'm aware of the
various manual vendors (W7FG, HI Manuals, Ray Sarrio,
and so on). I was hoping that one of my fellow hams
would be willing to share his manual, as I am always
willing to share my manuals.

I have finished restoring one SX-28A and about to start on a second one. The S-meter cases on both of the meters had cracks in the case shell. I suspect that the tape is holding the case together where it has cracked.

Good luck and enjoy the SX-28.

Burt Pratt, K4PRF

Greetings from Texas!

I am selling the following equipment on behalf of its owner, who is an inactive ham and a co-worker of mine. None of this gear has been used in quite some time. It was working when it was last used. He is the original owner and builder of the Heathkit gear. His father owned the Swan gear before him. Everything needs a good cleaning, however, none of it is beat up. I have not powered up any of the equipment. Assume that the Heathkit and Swan gear will likely need some freshening up and alignment, and perhaps some tubes. The buyer will pay shipping charges, or come pick up the equipment at my home (in Lake Dallas, TX, which is just north of Dallas).

Heathkit station ..... $250.00 plus shipping
SB-300 receiver w/ 400 Hz CW filter (does not have AM filter)
SB-400 transmitter w/ crystal pack
SB-600 speaker
All interconnection cables
Manuals for all three pieces (SB-600 manual is a photocopy)

Swan station ..... $200.00 plus shipping
Model 400 transceiver
Model 420 VFO
Model 117B power supply
All interconnection cables
Manuals for the 400 and 420 in GIF format on diskettes
No manual for the power supply

Miscellaneous:
Homebrew low-pass filter ..... $ 10.00 plus shipping
(SO-239 input/output connections)
MFJ 949D antenna tuner ..... $ 75.00 plus shipping
(300 Watt model, w/ balun, dummy load,
lighted cross-needle meter, dual range)
Knight desk mic, looks like Turner 254C .. $ 20.00 plus shipping
(has driver's license number engraved on
front but should be easily restorable)

Contact ME if you need to buy any of these goodies!

Misc for Sale: I have pictures I can send by email if you like.

1989 International Callbook
1989 United States Callbook
both in excellent condition, $10 plus postage for the pair.

Knight Model KG-687 Sweep / Marker Generator, very good
condition but missing the handle on the top. Still has the plastic
over the front dials.
$30 plus shipping.

Panasonic KX-P1124 printer, excellent condition with owner's
manual, power cable and "six" brand new ribbons. This takes the
small ribbons like the Okidata type printers.
$25 plus shipping.

IBM Proprinter II printer, very good condition, with owner's manual,
power cable and 2 new ribbons.
$20 plus shipping.

Approximately 30 foot roll of "real" ladder line. This is not homebrew
and has plastic spacers installed. Bare copper wire. You need to see
the picture on this one.
Make offer.

Military style phone plugs with the numeration:

ADC PJ051R M642 / 2 - 2 one each
KINGS PJ-055B one each
KINGS PJ-054R one each
JK-26 one each - this one is the
matching in-line jack
for the PJ-054R
Make offer on all, please.

Again, I have pictures I can send to interested parties.
Thanks, Randy N&#65533;SAH

From: jwodell@provide.net
Message-ID: <3a360dd3.867465@news.provide.net>
Source record: 58399

I have an FT243 7.035 crystal, which is in a DX60. Alas, it is rather sluggish in starting.

Wonder if there is a way to increase the feedback through the crystal. Been a long time since I used such a rig. The crystals I got from International work just fine.

They don't make FT243 sorts any more, sigh. Same spacing but little wires.

Please e-mail at jwodell@provide.net

I have soldered a couple of pin on a HC-6 socket to make an adapter,
seemed to work fine. Also, I think there is a HC equiv. to a ft-243,
call peterson crystal in in Nebraska, I beleive they still carry them.

You could try to disassemble and clean it. Use alcohol or
something that would leave no residue. Nothing abrasive!

What you have might be a Navy set, but only if it had a Txx tag on the transmitter. The manual would also say Txx or something like that. What it most likely actually is is a standard Merchant Marine HF console set (by Federal/Mackay/RMCA usually) as was used on things like Liberty and Victory ships. The Navy used a few of them, but, they should have a Txx or AN/SRT-xx designator on them if so, and they would have been used in transport vessels most likely (Navy borrowed merchantmen).

I am curious as to what the manual designation is and what it actually calls the transmitter, and what vessel/class-of-vessel it came out of.

If you still have the mg set for it, make sure that goes along with it, if possible, since someday, someone may actually want to run it as original. They were designed to operate at slightly reduced plate voltage in marine service for longevity and to prevent arcing.

I have been running its RMCA equivalent for the past 25 years, and they make very nice sets, properly run on HF CW. Depending upon which actual model it is, it may or may not require additional RF filtering at the antenna to meet spurious requirements. The direct plate feed on my set required conversion to Pi-M to meet specs. The 813's, run in marine service specs, have lasted me for 15 years, and are still barely used up.

Other than that, it should make someone a fine OT CW set. IF it were closer, I might even be interested. Whomever gets it, I would like to QSO on the air.....

It could be corrosion. XTAL blank is held in place by two shiny steel pieces with raised corners. These, in turn, are connected to copper squares attached to the lead prongs. A Spring holds everything in place.

You can try taking apart the FT-243 holder and cleaning everything with rubbing alcohol (I used after shave lotion - 98% alcohol). Just remember the shiny steel square pieces with the raised corners go TOWARD the XTAL blank.

My link has a small article on how I converted a HC/9 XTAL to FT-243 which will show you how these things are put together.

4921. FS: Drake crystals, mike plug, dust cover

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-13 18:01:16 UTC
From: Steve Huss <steven.e.huss@TEK.COM>
Message-ID: <LPOZ5.839$kW2.153621@dfiatx1-snr1.gtei.net>
Source record: 58424

Drake 4 line crystals:

(1) 40.1 29.0 &#65533; 29.5 MHz $7
(2) 40.6 29.5 &#65533; 30.0 MHz $7

Dust Cover for 4 Line $5

Right angle mike plug for T4 $10

Prefer to make a partial trade for a 28.6 crystal or sell all items for $25
and that would include shipping.

Thanks,

Steve

first try cleaning the crystals.
Take them out and wash them in soap and water.&#65533; Then wash them in plain water and dry them off with a paper towel.&#65533; Careful about getting your fingers all over them however.&#65533; Put the crystal back in the holder and try it.&#65533; Many crystals go soft after all these years.&#65533; A cleaning is usually what it takes to stop the sluggishness.

Drake 2B on Short wave Broadcast Bands (cheaply)?

Well a few days ago, I was waiting for the 40M Old BA traders net to start up. It was about 10 minutes away and I had my ï¿½ol trusty Drake 2B tuned up and ready. Not really enough time to slide down 40M to call CQ and start a nice rag chew on CW.

I sat there waiting and waiting and thought "It sure would be nice if I could listen to the BBC till then". Like most hams, Iï¿½m an avid SWLiï¿½er but all my receivers are BA tube types and it would take 15 minutes just to warmï¿½em up good and proper.

The Drake 2B was warmed up and ready to go NOW.

Sure would be nice if this Drake 2B could pickup the SWL BC bands!

Turns out it can. The 2B is basically an 80M receiver with a XTAL converter in the front end. Just pop an XTAL and youï¿½re there. But, hereï¿½s the rub, new XTALS cost $19.99 PLUS shipping!

Well it turns out ï¿½ Common low cost (i.e. cheap) computer clock xtals just happen to fall on the right freqs to turn the Drake 2B into a SWL rig. The big W-I-D-E 6 Khz AM BC signals are easy to tune with the 2B. Now, mind you, itï¿½s not the best hi-fi audio because the lil Drake is still very narrow on the 3.6 Kc selectivity setting, still itï¿½s good enough to listen to BBC news on the top of the hour.

I went to Tanner's Electronics (Valwood Shopping Center ï¿½ Carrollton Texas USA) and purchased 3 XTALS for $1.59 each.

The 13.5056 Mc XTAL was placed in Socket "B" to give me tuning around 9.500 to 10.000 Megacycles. 31M Short wave band (BBC on 9740 - very nice!)

A 13.970 MC was placed in Socket "C" To give a tuning range from 9.8 something Mc to 10.4 something. (WWV, Some Utes and 30M Ham band covered)

A 24.000 Mc was placed in Socket "D" giving tuning 15.1 Mc to 16.1 Mc.(19M Short wave) Thatï¿½s pretty strange since it doesnï¿½t show a 24.0 freq in the chart inside the 2B manual ï¿½It DOES show a 12.00 mc rock tuning that range, so it must be using 1/2 Harmonic??? (Hey, it's working, watdahell!)

Problems ï¿½

First - Tune pre-selector for MAX background noise. You will notice Pre-Selector band markings markings are way off. Live with it - Not a big deal.

Second ï¿½ Those computer clock XTALS are very small. Once I found they would work on the Drake 2B with jumpers, no matter how I bent and soldered the pigtail leads, they still fit very loosely in the sockets. I finally gave up and pull out the chassis and soldered the XTALS to the bottom of the socket board underneath the chassis on the correct socket leads.

For just $4.77, I now have another short wave receiver. The only problem I have now is keeping track of the time.

Missed quite a few nets just listening to the BBC!

4925. Power Xformer pri. question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-14 00:56:26 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3A381ABA.5FBD4EFE@erols.com>
Source record: 58428

I just bought a one-of-a-kind power transformer from Fair Radio. Its quite nice and "should" do the job I bought it for. However, upon looking at the winding schematic (printed on it) I now have a quandary of sorts. The primary has dual windings. Normally, I would have expected to see either a single 110 or 220 winding or a split/dual winding, phased to accommodate either 120 or 220v. This one has dual windings but are not symmetrical. One winding is marked 0 and 115v, with 2 terminals. No problem. The second winding, however, is marked 0, 95, 115, 125, with appropriate terminals for each.
The question, then, is how does one wire this up for 115v? Is the second winding more or less the same as the first, just tapped to "trim" for various input voltages, and wired "in phase" as one would normally do? Or is it that there's a 115v tap for an isolated output and only one real input winding? I've never seen one marked quite like this. Any thoughts out there? I'd hate to wire it up incorrectly are burn out a winding, unnecessarily.

4926. Re: Power Xformer pri. question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-14 01:39:41 UTC

Source record: 58429

D.S.,

There are a couple of possibilities and the transformer primary. One is that the 0-115 winding is an output for a bias supply or some low current source. The other is that the 0-115 windings are paralleled and the other collection of taps are used for adjusting the primary voltage. Probably the easiest way to find out is to connect the two 0 winding together and use a small light bulb such as a #47 from one 115 winding to the other. Feed the 115 winding from the power line and see if the lamp light much. If not, it is safe to connect them together. There will be a little excitation current so a little current is ok. If the bulb burns out, don't connect the windings and just use the tapped one for the input.

Regards

A.C.

One possibility would be to breadboard a new one. The six components that make it
up are readily available. I've often wondered why they put CP401 in there in the first
place. The only thing that comes to mind is tolerances.

I remember when my dad used to take all the tubes out of our TV to the drugstore in a paper bag to check them in the tester. When he found the "Bad" one, I noticed it didn't look much different from the new one, except the "Raytheon 6AU6" might be rubbed off from handling. What happened to it?

Obviously the heater was still working because it "lit up" and so electrons were flowing to the grid and to the plate. I looked, and the grid and plate elements were still in there, so why would it stop working... ever? The whole affair is permanently sealed inside the glass vacuum. It would seem to me that it SHOULD work indefinitely, so long as the heater didn't burn out. Who can tell me this mystery that has defied my logic and reason for all these years? Thanks, JJ

Aside from internal shorts caused by distortion of the metal parts or
flaking of conductive oxide coating falling between elments, the major
problem is the 'consumption' of the emission properties of the cathode
oxide. This oxide coating is heated to effective emission temperature
by the heater, but as it is used (or not) the emissivity slowly
degrades until the coating can no longer supply electrons at a
sufficient rate to meet the current needs of the circuit (low
emission). There is also a secondary situation where the cathode is
heated but no current flows for long periods and an insulating layer
apparently forms, preventing proper emission when flow is needed--this
was noted with tube flip-flops which had been in one state for long
periods and would not flip when triggered. A less common failing is ion
poisoning of the cathode because of gas ions in the vacuum--usually
occuring only in high dissipation tubes.

It should be fine to connect the 0 and 115 points together, and then
apply the line to 0 and 115 or 0 and 125 as required for local line
voltage. This transformer is configured for 'world use' where it can
accommodate 95, 115, 125, 210, 230 and 240V with appropriate
connection. The test suggested by the other posters is still a good
idea.

All true - but there's more.

Life tests on receiving tubes indicate that small but significant
numbers of gas molecules can actually migrate through the glass and
seals of tubes. This effect is most noted in smaller tubes where the

amount of excess vacuum space is small - like miniature receiving tubes. The process is negligible at room temperature, but at high temperatures it can be significant. Miniature tubes with close-fitting shiny shields in a packed, unventilated TV cabinet can reach surprisingly high temperatures after many hours of operation. It doesn't take much gas in a receiving tube to affect the operation.

There was an article about this in Electric Radio some years back. The military tested 6AQ5s and found their life inversely related to operating temperature. Water vapor, of all things, was one of the worst contaminants.

This is why those special black IERC tube shields are so prized.

In addition, some early TV set designs were masterpieces of "pushing the envelope" and getting the most performance from the least expensive design. It was common to operate tubes at maximum ratings and make little or no allowance for aging, low line voltage, etc. Designing for maximum tube life in consumer electronics wasn't usually considered.

I've often found that tubes thought to be "bad" because they wouldn't work well in a TV set tested fine, and were perfectly usable in less-strenuous applications. 5U4 rectifiers that were inadequate for use in TVs that demanded every possible milliampere have lasted many years in equipment that wasn't so fussy.

I thought I was good on visually checking
tubes for "good" and "bad", judging from its
discoloration of the base, gas getter, as well as
plate cap oxidation.

The other day I destroyed a pair of 6LQ6
after mis-tuned my SWAN 500CX.
These tubes were destroyed in seconds.

Judging from their appearance, I could
not notice any physical damage at all.
I only noticed that filament "looked"
dimmer. I wonder which part (cathode,
I guessed) was damaged?

Any ideas? Thanks.

Jonathan

A layman like me would say that due to excessive current,
that the cathode was fried/scorched for lack of better
terminology. I too would like to hear a more precise
explanation.

Yes Bill - your right!

6LQ6's are good for about 30 - 35 watts 100% duty factor. These cheap tubes ($1.75 in the 60's) were made for the horizontal sweep circuit of tube TV sets. I have fried a few tuning up my Swans when I first started many many years ago.

Some times you can see that they are bad. One from a Swan 1200X Amp had a small crack in the glass envelope. It made a nice buzzing sound when it died. Another from a Swan Cygnet had what looked like a dark spot blasted on the side of the glass envelope. I still have them and look at them every now an then.

Interestingly enough - not all 6LQ6's are the same!!! Some have the lead going to the Plate connector bent IN instead of OUT (away from the plate). These types tend to short out when driven hard at RF Freqs. Of course they work great in TV sets and were never meant to be used in RF amps in the first place.

I've seen these types pop up at hamfests every now and then. At $40 a pop now, buying one could be an expensive mistake. BE WARNED! Look carefully.

ALSO - his 6LQ6's could STILL be good. Swan had put a power resistors (10 ohms I think) on the cathodes. These tend to open up - acting like a fuse.

Many a nice Swan was sold for $25 at hamfests when all it need was a $0.15 resistor.

4963. FS: Rare Johnson Viking Invader 2000

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-15 17:08:44 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <3A3A501C.D0157832@hamradio.org>
Source record: 58367
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Here is an E. F. Johnson collector special.

I recently acquired a rare factory original - not an upgrade - E. F. Johnson Viking Invader 2000 transmitter in very good condition with the intention of restoring it to "exellent" and using it. It was in working condition and in daily use by its previous owner when I acquired it.

I find I no longer have the time or inclination to restore it (should only require some light cleaning and slight cabinet paint scratch touch-up), and am looking for someone who has the same ambitions I had.

For the person who is not a Johnson aficionado, here is a quick operational description. This is Johnson's fine filter-type 80-10 meters SSB transmitter with a pair of 6146s driving a pair of PL-175As to 2000 watts PEP SSB, 1000 watts CW and 800 watts AM. The final amplifer stage can be switched out and the unit operated as a 100-watt only exciter. The transmitter is a complete desktop unit, with a separate floor-mounted (on casters) power supply. It is complete with some spare used tubes, and two original owner's manuals. I even have the original purchase receipt from April 15, 1963.

I am describing this as rare since, next to the Viking 6N2 Thunderbolt (285 units), it is the rarest of the Viking amateur radio equipment with only 386 of these units were produced by Johnson from its introduction in 1960 until it was discontinued in 1964. This is one of the later units - one of only 34 produced in 1963.

The firm price for the complete Invader 2000 as described is $500.00 - pickup only - or I will meet halfway up to 200 miles from Cleveland, Ohio. I will not attempt to ship it since I cannot adequately pack the heavy power supply unit.

Al - K8EUR

Those tests are all good, but they won't catch all bad tubes.
>
> The other day I destroyed a pair of 6LQ6
> after mis-tuned my SWAN 500CX.
> These tubes were destroyed in seconds.

Yup. That's why all the gear I build uses transmitting tubes.
>
> Judging from their appearance, I could
> not notice any physical damage at all.
> I only noticed that filament "looked"
> dimmer. I wonder which part (cathode,
> I guessed) was damaged?

Possibly. But there's another possibility: Screen damage.

Many high-gain screen-grid tubes exhibit all sorts of weird screen behavior while tuning. Under some conditions you can see negative screen current (!) and during underloaded conditions the screen current and dissipation can be very high. Get the screen too hot and it will vaporize a little, "poisoning" the cathode.

Also possible is a spurious oscillation (parasitic or at the operating frequency) that caused some tube ratings to be exceeded.
>
> Any ideas? Thanks.
>
Sorry about the tubes. Many ham rigs of the era (Drake, Swan, National, some Heath, early Yaesu) used "sweep tubes" because they were cheap, readily available, and would run lots of power at low plate voltages. In uncompressed SSB service they gave "acceptable life" at the time. When sweep tubes were $2 and 6146s were $8 the approach made sense.

Some folks have actually converted their sweep tube rigs to use 6146s, even if it means a little less power. I know of a conversion for the FT-101 family, and I've heard the Drake T-4 family has a similar conversion. Perhaps the same could be done to Swans.

Hi all,

to complete the R.L. DRAKE VIRTUAL MUSEUM pages, we are looking for picture or information about the following DRAKE items:
2-A Receiver, early model with curved line on the S-meter
2-C Receiver, early version with connector on the rear labeled "2CN"
587 Audio Band Pass Filter
7079 Vinyl Carrying Case for TR-33C
AN-5 Antenna Kit for SPR-4
BBLT-144D Hustler 3.4dB gain antenna. Not a Drake product, but mentioned in several Drake brochures
DC-PC DC Power Cord for SPR-4
DL-300 300W Dry Dummy Load with short cable and PL-259 plug
F-15/U Low Pass Filter made for The U.S. Army Signal Corps
HPF 100 High Pass Filter, attenuates 0-52MHz
HS-1 Headphone
IN-4 DC to DC inverter
IN-4B DC to DC inverter
L-77 Linear Amplifier, L-7 with face lift to match TR-4310
LN-4 AC Line Filter
LN-5 AC Line Filter, "Inductube"

I found an old telegraph key which has only these marks on it:

Engraved into the bakelite base: J-2
Stamped in Orange/Red ink on side: SC105A

Any ideas on its age?

TIA,

Steve.

Being a landlubber, I use mine for stabilizing the shack in a tornado....

(That is actually the truth.... by logic, after a tornado here in '88
the only thing that survived was the shack, held down by such fine
boatanchoring devices as above.....(:+}}... It must have been the
massive stabilizing device weight.....(:+}}.....)

Steve -

The J-2 is a relatively scarce key and is from the WWI era and was used by
the Signal Corps. Regards - Mike

Gee bought my DX394 B in Beaverton OR for a Tad under $200USD
Actually there might have even been a C as well, I'm not sure.
Narrow band kits are available on the net for under $30 or so
I recall.
Good investment.

4974. Need Schematics? Have many to offer via email

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-15 23:05:41 UTC
From: eighty5max@hotmail.com
Message-ID: <3a3aa2dd.972084931@news.erols.com>
Source record: 58372

Wanted to trade, purchase or whatever.

I am in need of the following schematics. One for an RCA 8PT-7010 TV (sams number 336-14). And I also need one for a Pilot TV37 TV (sams number 62-16). And one for a Hallicrafters model 506 TV (sams number 91-6)

I have most Sams Photofact folders from volume 1 to 327 (years 1947 to 1956), a few between 327 and 1000 (years 1956 to 1968) and many more above volume 1000 (1968 to the late 1980's). I also have various other TV schematics and info from the Bietman line of Most Often Needed TV Service Books.

I'm offering scanned copies of my collection to fellow tinkerers. And I would like to find copies of the two above mentioned TV's if anyone has them.

I can scan whatever you need and email them to you. Please see the following web page to see the high quality of my scans.

www.erols.com/mar10s/frntpage.jpg

So check your vintage equipment from 1946 or newer and let me know what you need. I'll check my collection to see if I have it.

Take care all

Steve

For Sale,

Radio Shack Realistic DX394 shortwave receiver. This is a european model
and is the latest B version with all the latest factory updates on it.
You will need a 12 volt adapter to power it. I took it out and used it
to make sure it works fine, other than that it is like new. You will
think you walked into Radio Shack and and bought new over the shelf.
Email for a photo or more info. $275.00 and I will pay the shipping by
U.S.P.S. Priority insured mail.

Thanks,
Rick B.

They are probably a matched quad of germanium diodes. I'd go to RadioShack,
and buy
four of their 1N34A diodes and use em. I'd guess they were 1N270's or
something similar.

4997. Re: Why do TUBES FAIL?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-16 17:03:47 UTC
From: ham_guy@webtv.net
Message-ID: <23600-3A3BA073-8@storefull-137.iap.bryant.webtv.net>
Source record: 58302

Well, gee, thanks fellows. I believe I understand a lot more about tubes now. With each answer, more questions come to mind that have to be asked:

A ham radio book I used to have told the story of some 14 year old kids in a 3rd world country that had no money to buy equipment. It said they "made their own tubes" using discarded glass, metal, etc. and evacuated the tubes using a column of mercury in a glass tube.

After what you all have to say about these exotic coatings and all, this story seems all the more incredible. If I needed to 'make' a rectifier tube, how would I determine the characteristics it would have? Just make a few dozen and pick the one that worked the best? If a tube that was scientifically designed and manufactured to specs only works for a limited time, how could anyone have possibly made one at home that would even work at all? This is mind boggling!

The next question is a bit more relevant to me: I also have a Swan 500 that I bought almost new back in the 70's. (I've been trying to learn Morse code since 1959 .. 41 years... still at it.... and hope someday to USE my Swan radio) I have never hooked up a transmitting antenna or keyed it... just use the receiver.
Now you guys have me worried. If I pass my test and get to where I can load up a dipole... I would probably do as you say... FRY the finals. If you had trouble learning to tune a SWAN, I will probably also have the same trouble. Would you care to offer some advice on this? If these tubes are that hard to get, I sure don't ever want to destroy them. So far the only problem I have with my SWAN is that it drifts off Q and it has a 60 cycle hum in the speaker... probably some leaking electrolytics in the PS.

Tell me more about what NOT to do when tuning up.... would a Cantenna dummy prevent this from happening, or could the tubes be overloaded even into a dummy? Thanks, JJ

It would be impossible to evacuate the tube to sufficient vacuum using such
a crude
pumping scheme. I wonder what they used for seals, a getter, and a
filament... Sounds
like the stuff Urban Legends are made off, although there is some
romanticism to the tale.

Drake used to supply the circuit diagram for the 2LF upon request.

I got a diagram a few years ago from them but have not had the time to build the unit.

5007. FS: Heathkit DX-100B Very nice!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-16 20:43:20 UTC
From: Ron Manfredi <wa2eio@mindspring.com>
Message-ID: <3A3BD3E8.91C5E48C@mindspring.com>
Source record: 58311

I need the room, and so I have decided to sell my heaviest boatanchor. A DX-100B in very nice conditon, some minor marks on cabinet. All original knobs. Original manual in good condition. The transmitter works perfectly. The only mod is for push to talk, along with a standard 1/4" stereo mic jack replacing the original single button connector. $175.00

Prefer pick up on Long Island; rig is over 100 lbs, so shipping will cost you near half again as much as the rig! And this reallly isn't the time to use UPS, especially with such gear. I will be available from 12/26 to 1/2 for daytime pickup. You can put it through its paces on any of its (legal) bands, and listen on a nice 75A-4. (Which is NOT for sale!)

E-mail for more details and some photos.

Ron WA2EIO

5008. FS R390A

Newsgroup: rec.radio.amateur.boatanchors

Source record: 58312
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a R390A receiver for sale.
It has a refinished front panel plus old panel
Top and bottom covers.
Extra set of knobs
This one has meters
A set of manuals.
I mounted the new panel on and didn't get around to putting the knobs
back on.
It is a Collins R390A manufactured by Motorola.
All filters are in and working fine.

If you are into AM or broadcast radio reception this is *the* receiver.

Sorry but no shipping on this behemoth. You will have to bring help to
get it into your car. Spare tubes come with it. price $425.

73,

Jim n2go (near Buffalo New York)

5009. which wires use when rewiring an old radio or a boatanchor?

I think the rubber-coated wires in an SX-28 are original. At least it looks
that way in my two SX-28's. In any case, I would use ordinary new
plastic-coated wire to replace the crumbling stuff. It's much more durable
than the old rubber coated kind.

Happy holidays.

Looking for information on the DC voltage of the optional battery that goes in the AOR 7030? Has anyone used a substitute battery? I believe the AOR unit is a Lead Acid type battery so the voltage is probably more like 13 to 14 volts rather than 12 volts?? AOR charges a hefty $200.00 for this option! Any information would be appreciated. Please email me at rlonn@home.com

That's not a boat anchor, My Realistic SX-190 is a boat anchor, the DX 394
doesn't qualify as a dinghy anchor LOL.

teflon has good aging characteristics, just do not tie any cable ties very tight - it cold flows. Kapton is also good, so long as you avoid a high vibration environment because the vibration can cause it to fracture. I also have not seen PVC insulation go bad except where exposed to chemicals (including ozone)

there is a fiberglass type that might do very well..though you might have to
pick it up
at a appliance parts/supply house and may only come in one or two colors

Hi Robert,

I had a 7030 a few years back and seem to recall the receiver needs 15VDC in order to meet its IP3 spec. I picked up a 12V-->15V converter and ran it portable that way.
It should probably be OK at reduced IP3 on 12V

Message-ID: <20001217171750.18694.00001643@ng-cm1.aol.com>
Source record: 58339

Sorry for not providing more info earlier, was in a hurry and I really didn't think I'd get this many responses so soon, hi. Let me do the best I can and feel free to ask questions.

The unit size, less the gear train, is 8 3/8 inches wide, 2 9/16 high, and 4 7/8 inches deep. Gears stick out another 1/4 to 3/8 from the front. There is an improvised crank, looks like a 6/32 or 8/32 stainless steel bolt. The entire frame and the gears are bakelite, I believe. Gears are anti-backlash. Most of the metal parts look like silver plating including the wire, rollers, connecting bar, etc.

Wire looks like #16, silver plated. Coils are about 2 inches in diameter and 4 inches long, each. I believe 35 turns each. I guess one could wire the coils in series or parallel, or independent of each other for a double balanced tuner.

Hadn't thought about a price yet but I believe I have a bit in it due to it's unique construction. Never saw anything like it before. So I'm open to offers, not sure whether I can or can't get my investment back, hi. Might go Ebay after the New Year, will have to see.

Thanks for your interest.

73s,

Evan

You should sell the 5AR4 on that "bay" place.
With the price audiophiles pay for 5AR4s, you
can get a batch of 5R4GYs.

Hi All,

Have a couple of Hallicrafters transceivers to sell:
1. SR-500 Tornado with matching PS-500A AC supply and original manual. $450
2. SR-160 with matching PS-150-12 DC supply and copy of manual. $150
3. Package deal - both for $550.

Both units are in very good to excellent condition, clean and fully
operational.

Probably not. 5R4GY takes higher voltage than 5AR4.
You can check the following web site for details.

http://hereford.ampr.org/cgi-bin/tube

<bellfamily@supernet.com> writes:

>Is a 5AR4 (rectifier) an acceptable substitute for a 5R4GY?

It depends on the application.

The 5R4GY has higher voltage rating than the 5AR4. Depending on the
application, 5R4GY may have slightly higher current capacity. 5R4GY is directly
heated, while the 5AR4 is indirectly heated.

5R4GY has PIV rating of up to 3100 volts
5AR4 has PIV rating of 1700 volts

Another issue is cost. The 5AR4 is prized by audiophiles because it is used in
many popular amplifiers. 5R4GYs are industrial/transmitting tubes, and much
cheaper. There are lots of dealers on the web who buy and sell tubes, both new
and used, who can give you an idea of the relative market prices. Maybe you can
make a trade with one..

Heck, I'll trade you two 5R4GYs for one 5AR4....;-)

(I use a Dynaco Stereo 70)

Dear Pete,

Do you know the R.L. Drake Virtual Museum.

The Drakesshop only do a copy of some of our page, but he stop now because
if not I will attack him with my lower.

The R.L. DRAKE MUSEUM is the most complete Drake site in the World. All the
Ham and commercial Drake items (except satellite items) are in those Web
Pages (More non produced items, prototypes etc...)

Do you know it, or do you don't like it ? :-)

Best regards, 73,

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For sale:

Realistic SP-150 speaker, the matching speaker for the classic DX-150 shortwave receiver. The brushed aluminum front panel is in very good shape with only a couple of TINY scratches. The paint on the cabinet shows some wear and some chipping, but is quite presentable. The original feet are in good shape. I've installed a new 6' cord and RCA plug. There are not many of these around any more, and the few that I've seen lately have been really scruffy. This one is NOT what you would consider to be "collector grade", but it's in good shape and would look fine sitting next to your DX-150. Asking $20.00 plus shipping.

Source record: 58287

I've used a SWAN 350 for years. I don't believe the tune up is
significantly different for the 500.

1) Set PA Load for "Maximum"
2) Slightly imbalance the carrier (rotate "Car Bal" no more than 10
degrees)
3) Key and hold the microphone
4) Tune PA Grid for maximum
5) Tune PA Plate for minimum
6) Tune PA Load for specified Plate current.
7) Repeat #5
8) Balance the carrier for minimum output
9) Release Microphone PTT etc.

Note: it can be easily done in 5 seconds.

I'm still on the original finals after 30+ years. But the output on 10
meters is down alightly ;)

Deacon Dave, W1MCE

PS My 350 is now in my equipment archives. Been stored there for 5
years. I've gone to solid state.

If it has the dynamotor connector removed and an "S" meter is in it's place, it might have been mine once. I modified the ugly thing severly.

I sold mine to another ham in SE AK and shipped it to him via a fishing boat going that way.

I will pay $200 plus shipping for the BC-942 receiver
in good/clean/unmodified condition.
Negotiable price for other conditions.

This unit looks like the ARC-5 VHF R-28 VHF receiver,
but has a "U.S. ARMY SIGNAL CORPS" nomenclature tag
and will have other differences that distinguish it
from the ARC-5 model.

Thanks,
Dave Stinson AB5S

I have an old Army mine detector that has no identification plate or mfgr information. Need help in identifying this thing. It is round, about six inches diameter, and about two feet long. It has a number of 1U5 and 1L4 tubes in it. It has two knobs on one end, labelled "R" and "X". Inside there's a schematic printed directly on the aluminum frame, and a date "1953" stamped on it.

Any help? Thanks in advance.

Hi All,
I have a few National NC57 cabinets free for the price of shipping.
Please note that NONE of these cabinets have the National emblem, metal speaker cover or bottom plate.
1) This one is in very good shape, has been repainted a darker grey that most Nationals that I have seen. The lettering is very good. No major scrapes or dings.
2) This one is original National color, has a few scratches on the face and lid.
3) a restoration cabinet, needs re-painting.
4) another restoration cabinet, needs re-painting.
If interested, please email me directly at: nc183d@aol.com

There's a guy on ebay thats been selling lots of knobs that
look real similar to the Swan ones...not the main tuning,
just the regular ones. Search for "texmart". He's selling
them in bulk usually, so if they don't match exactly, maybe
you could just replace all of them???.
Good luck.

I have a nice S-120 (not an A model) for sale.
It's been hanging around the house for a while. No longer need it. I fired it up this past weekend, put 40' of wire on it and listened to 11Mhz all night long. Seems to work on other bands too. Probably needs an alignment though. Not missing anything except for original telescopic antenna. Good condition cosmetically.

Asking $40 not including shipping.

A Glass-Blowing Class project I once saw was a Mercury Diffusion Pump!
All this requires is a Alcohol Lamp, Glass and a good deal of imagination.
This could easily produce the Vacuum required to run a simple Electron
Microscope or even a vacum tube. It is possible to get good vacuum without
using Ion getter pumping. It seems to me I saw several "Amateur Scientist"
columns in "Scientific American" on Vacuum Pumping techniques decades ago.
The first Cathode Ray Tube was created under very similar circumstances.

Yukio YANO VE5YS
an old EM tech.

It's a true story, but some of the details are slightly off.

The book is "200 Meters And Down" and it was a single young fellow in the early days of radio. Not a third world country, either - the USA. He built everything from "found materials" (the PC term for "old junk".

Filaments and seals came from old light bulbs. The getter was probably lime or some other early type that doesn't have to be flashed. The tubes were probably pretty "soft" by modern standards, but perfectly adequate for their intended use.

I'll look up the exact text if anybody wants.

Making tubes that work isn't outside the realm of the serious basement experimenter. Making them small, cheap, high performance, uniform and long lived is another story.

Homemade tubes? I've done it. See:

http://www.azstarnet.com/~pfriedr/transistor/gaudion.gif
http://www.azstarnet.com/~pfriedr/transistor/jtball1.jpg

These are some homemade transistors I've played with.

http://www.azstarnet.com/~pfriedr/transistor/xsist2-w.gif
http://www.azstarnet.com/~pfriedr/transistor/xsist4-w.gif

The projects will appear in a book I'm working on, a follow-up volume to
"The Voice Of The Crystal"

Yes, I agree. You can make a passable vacuum tube with a test tube for the globe and bring the leads through a rubber stopper. You need to cover the outside of the stopper with sealing wax or epoxy, and the rubber will slowly out-gas. You can pump down with a refrigerator compressor and a crude mercury diffusion pump (see Scientific American from about 15-20 years ago 'Amature Scientist; Mass Spectrometer' IIRC). You will not make a high performance tube, but you can certainly make a working one (for a while at least).

As I recall, that's the big, bifilar wound, open coil model, and mounted on a flat plate. It was 300 ohm (bal) to 50 Ohm (unbal, nom) and rated at about 300 watts.

Bill,

Here is a link to the Heath Virtual Museum. Great Site and in this case
they have a copy of the description from catalog page. Supposed to match
unbalanced lines to either 75 ohm or 300 ohm balanced line, 80-10m, 200w

Yes, you can use a mercury pump to create a useful vacuum. Construction of the pump is fairly straight forward and a fore pump might be salvaged from a retired refrigerator.

The main problem is contamination and with a mercury pump you get mercury vapors in the working space. Fine if you're making rectifiers, but for high power tubes this could be disastrous. The answer is a cold trap and generally you need dry ice to do a good job. Not out of reach for a skilled constructor, but definately not a kitchen table project.

Phil, and all the other who answered,
thank you very much for your contribution.
I think will try the wires I can find in telephony cables used for external installations . I hope they will remain intact for at least 30 years under ours chassis....An alternative being the wires you can find in Category 5 UTP or FTP cables for computer and telephony cabling..
Comments?
ciao

Look closer, Ed. It is MFP, Moisture and Fungus Proofing, and since the lifetime was limited, and the treatment had to be refreshed, the date was important.

Missed you at the Christmas party. How was hunting?

I can remember seeing "MFP" on equipment. I think this refers to Moisture and Fungus Proofing, something that was needed for equipment to be shipped to the tropics in WW2. I assume the MFP process was rated only for only a certain time period, hence the need to state the date of treatment. I remember seeing a varnish-like coating applied to some of the stuff.

It seems ancient, but it looks really cool.

Cost me 25 bucks and some solder - seems to be hitting repeater here no probs.
I have no manual and can't work out whether / how this rig is sending PL
tones - any help welcome.

Gracias

Please keep us posted on it.

There was an article in QST in the early 1960s by a guy who made his
own tubes. Pretty advanced ones, too. The main limitation he had was
miniaturization - his bottles were all pretty big.

In the early days, some tube manufacturers would take old tubes in
trade and rebuild them. Big transmitting bottles were most commonly
rebuilt.

Anyone interested in a 10M FM GE Pacer tube type commercial rig. It is a mobil unit that is hybrid with 90% tubes and 10% transistors used in the inverter power supply. The Pacer was in commercial service in the low band and tuned up for 10 FM. The Pacer works - I just played with it the other day. Reason for sale is I just don't use it anymore and it is taking up space.

Any offers??

Jim

I remember the QST article, and had intended to mention it here. I think it was in 1964, and it was by someone who was neither American or Canadian.

He had a full set of tools to make tubes, though I can't remember if he had them for other purposes, or specifically to make his own tubes. As I recall, he both copied commercial tubes, and created his own. The latter being useful because he could make just the right tube. He might have "cheated" a bit and used bases from commercial tubes in some cases.

It is worth looking up the article for those who are interested ion the topic. It wasn't a technical article, but it went into the tehnical aspects to a certain extent. I don't recall ever seeing another article in the hobby magazines about making tubes, though if someone went digging in very old QSTs, perhaps they'd find something.

I've often thought the moon would make a wonderful laboratory for tube experimentation. You wouldn't need a glass envelope. Perhaps there could be a "tube design" room in the space station? You could cobble up your design, stick it in a small test chamber, and open a valve to space. Too bad we aren't doing tube research anymore.

Nothing smaller than the "500" would run off 220
according to the 1959 catalog. My Vik II has only
a 120 volt primary. See nothing mentioned of
overseas units.

I would like to trade the following items for an excellent condition, late model Yaesu FT-1000MP (not a Mark V), preferably with filters. Will also consider selling all these items as a set but don't want to sell them individually right now (if I decide to sell them individually, they'll go on eBay).

All of these pieces came from the estate of a local neurosurgeon about 18 months ago and I've been using them on 75m AM for most of that time. Unfortunately I don't use them enough to justify their continued presence here - and would rather have a newer HF rig as my main interest is in contesting.

1. Collins 75A-4 - CCA Very Good to Excellent condition. Very early model, Serial #871.

Does not have the 4:1 spinner knob. Very clean inside and out. Slight wear around the main tuning knob but otherwise spotless outside. Has had Service Bulletin 2A applied (S-Meter Sensitivity and Zero potentiometer replacement) as well as the K7CMS mods. Was serviced by Warren Hall K0ZQD about a year ago, which is when most mods were applied. Line cord was replaced with a heavy 3-conductor grounded cord for obvious reasons. Includes stock 3.1KHz SSB mechanical filter as well as 4KHZ and 8KHZ mechanical filters from an R-390A (wired via a 9-pin plug so can be removed easily). This receiver works great and is electrically 100% operational. Absolutely no problems and is one of the nicest looking 75A-4's I've ever seen. Includes the original instruction manual.

2. Collins 270G-2 Speaker - CCA Excellent condition.

Grill was replaced with a reproduction flocked grill from Mort Jones W6KLG. Speaker works fine, is in excellent condition and has original cord. A couple of very minor scratches on the top front edge - barely noticeable.

3. Collins 32V-3 - CCA Very Good condition. Very early model, Serial #119

Excellent condition on the outside - only a few minor scratches on the edges here and there, almost undetectable. Loads to around 120 watts carrier on all bands, but I primarily use it on 75 meters and occasionally on 10m. Always excellent audio reports and very nice looking modulation on the monitor scope. Tube complement was recently replaced and the line cord was replaced with a 3-conductor grounded one, but no other maintenance has been done since I've owned it. This

rig transmits great and I don't know of any problems with it, but I haven't used it extensively (probably about 3 hours total transmit time in the last 18 months) - so don't be surprised if it needs a few internal components replaced and/or to be aligned for optimum performance. Will also include 2 spare 4D32 tubes (one is a pull from this rig, the other is NIB). Includes the original instruction manual.

If you're in the midwest reasonably close to Kansas City, I can put the 32V-3 on 75m for you to hear (I've got a low inverted-V so can't get out too far); 10m is also an option if you're a little farther away.

I'll also include a nice D-104 microphone and DowKey T/R switch with the package. All you'd need to do is hook up power and an antenna and you'd be on the air.

My preference is to trade straight up for a nice FT-1000MP with a full complement of InRad filters, but would consider selling all 3 pieces for $2250 FIRM. I'm not interested in selling the items individually right now, so please don't ask!

I prefer pick up at my house in Kansas City where you can try everything out, but would also be willing to drive a "reasonable" distance to meet the buyer for delivery for a fee of $25 (by reasonable I mean Oklahoma City / Des Moines / St. Louis / Paducah / Omaha / Salina KS / Little Rock AR). Shipping is not an option, as the 32V-3 weighs well over 100 lbs. I'll also be at Dayton this year with Jim W0NKL so you could pick it all up then (applies to an outright purchase only, and I need the money up front!)

SERIOUS INQUIRIES ONLY - If you don't have a FT-1000MP to trade or $2250 in your pocket, please QRX!

I'll get a few shots with the digital camera in the next few days and put them on a web site for viewing by those who are seriously interested. I can also provide my telephone number if you'd like to talk to me in person about it.

The following web page has this same information and will have pictures within a few days:

Still happens, at least did not long ago when I last had contact with
the BC industry. Pricey Xmitting bottles are routinely sent in for
reburbishing.
Conversion to solid state transmitters would be expected to end that in
time.

Hello--

It's "MFP", an abbreviation for "moisture and fungus-proofing"-- a varnish coating that resists attack by, yes, various species of fungus found in the tropics.

IIRC, some versions of this coating may contain mercuric compounds-- can anyone confirm this? If so, it's a bad idea to breathe the fumes given off by the varnish when you solder an MFPed connection.

First off, the header should have read "160" meters, so a typo is at work here. Second, this *is* ham activity, completely legal, just a chance for the fellows that like the sound of the old AM equipment to show off their audio. Having said that, the fellows that work SSB have really worked hard in recent years on their audio using equalizers and such, and the difference isn't as great as it once was.

But anyway, there's nothing "pirate" about this....

Drake TR-7 Amateur Radio Transceiver

This Drake TR-7 transceiver (serial no. 2918) covers the amateur radio bands from 160 to 10 meters including the WARC bands. The radio has continuous receiver coverage from 1.5 to 30 MHz, at least (I haven't checked to see if it will receive below 1.5 MHz). I don't think it has the AUX-7 board installed, however it has been modified to transmit on the WARC bands using the up and down buttons. The DR-7 digital display board ,NB-7 noise blanker and SSB filter are installed. The radio has been modified (resistor) for wide band AM reception.

The radio is an early model with the dull black finish. On an appearance scale of scale of 1 to 10, I would rate it a 9, since there are some tiny scratches on the front of the main tuning knob and the top of the cabinet, under close inspection, has some faint marks from the feet of a piece of equipment that was apparently placed on the cabinet. Electrically, as far as I can tell, it works perfectly. In November 1998, the unit was returned to the R. L. Drake Co. and the final transistors were replaced (a copy of the invoice will be included with the TR-7). The radio puts out full rated power of 150 watts. Since 1998 I have used the radio primarily as a receiver. I would estimate that the new final transistors have less than 3 hours of use.

The radio comes with a partial operating manual and a copy of the detailed service manual.

$490.00 plus shipping and insurance

Thanks,

Rex,K2AM

Only if Johnstone made models for export would there be a 240v primary I suppose, and I don't know if they did make for foreign markets. It's something of a bind not to have a set with 240 (as here in UK), put it this way, I'm somewhat put off by having to arrange for voltage conversion., which is a pity because owning some of the Johnstone stuff would be cool. The Vik II looks nice.

Nothing like a little Saber Rattling to get those typos in check.

Actually, those first freqs would automatically equate to 160 meters.

It is kind doubtful that a pirate would use a ham call and then give a
commercial address and make reference to merits on professionalism

I think we take ourselves a little too seriously sometimes........

I think 'ol "KentWI" needs a short course
in reading comprehension.

Why are there so many ham cops?

Why are they so all fired ready to pop off that they will
fire off a reply to a newsgroup posting that they
obviously read but did not understand?

Here's to Bill, KD0HG (BTW Kent, 'ol bud, that's a HAM call),
and the group.

I'm gonna go give a listen on 160 m. And no, the direction
finding equipment will not be needed...

Gary, WG7X

KentWI .

I use my Viking Ranger II on a step down transformer....nothing in the low power range has a dual primary.

All the Johnson stuff I have (TR switch, Viking II, etc) I use on the step-down.

Hi Bob

I really must not let this voltage thingy from stopping me collect American gear should I? Of course, I should bite the bullet and just get myself a step down transformer like every body else. That's the way to go.

5235. Ranger Advice Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-25 03:27:23 UTC
From: TCNET058@ysub.ysu.edu
Message-ID: <16713BCBS86.TCNET058@ysub.ysu.edu>
Source record: 58139

Looking for someone out there who can steer me in the right
direction on a problem I am having with my Johnson Ranger II.
Power output is only 25 watts on 10 meters and I really have to
push it hard to get 25 watts. Around 28.700 mhz there is a strong
signal in the receiver that is coming from the Ranger.
I have had this thing on the high end of 10 and got good signal
and audio reports. I also re-built the power supplies changing all
the old dried up caps with new ones of the same value of the originals.

Any advice on this problem welcomed.

73s

5241. Help on Valiant

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-25 11:07:43 UTC
From: Bob Maser <w6tr@mindspring.com>
Message-ID: <9279oh$p2n$1@slb3.atl.mindspring.net>
Source record: 58045

I just acquired a Valiant and everything works fine except when I first turn it on from a cold start, the modulator idle current is high(about 125ma). After warm up it drops to 75ma. I can't bring it down to the recommended 40ma with the 5K pot on the side of the chassis because it's already at its ccw limit. I checked the pot and the 15K fixed resistor and they check out OK. Any ideas?

Bob in Riverside CA

Bob - try a new set of 6146 modulators.... also check the B+ to make sure it's not drifting, high, or otherwise messed up. Can't remember if the modulators also have a cathode resistor, if so check that. However, I suspect the problem is probably in the bi-ass supply. There is a 6X5 or something similar rectumfrier for the bi-ass - check to make sure it hasn't crapped out, and the filter cap is OK, etc. Believe the biass supply should provide -80 or -90 V or so. Is the idle current on the finals OK?

73 and good luck, John

the modulator idle current is high(about 125ma).
>After warm up it drops to 75ma.

Bob,
Measure the bias voltage at the grid of the modulators as the rig warms up to determine if this is a power supply problem, a leaky tube (can it do that?), or a component such as a carbon resistor that is changing as it warms up.
If possible I would unplug the modulator tubes (and any other tubes getting bias from the same supply) for these first set of measurements.

See, my approach is to eliminate as many variables (the tubes) as possible to isolate the problem.

Rick K2XT

> Power output is only 25 watts on 10 meters and I really have to
>push it hard to get 25 watts.

Fred -
I don't know about the spurious signal on 28.7, but 25 watts isn't a
big problem with a single 6146. Yes it should be able to get about 40
watts with good drive and a good 6146.
So if you get the power on the lower bands, AND you get plenty of
drive on 10 m you probably have a soft 6146, it seems rather obvious.

I test 6146s with my DX60, and I can usually get 40 watts on 10 m with
a good tube.

Rick K2XT

5247. Caution with a Johnson Viking II

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-25 17:52:39 UTC
From: zapp11nospam@hotmail.com
Message-ID: <3a47875d.17967175@www.zianet.com>
Source record: 58051

I have a Viking II and it works great, but only after I did a serious modification -- which I hated to do. So if you get a Viking II, I found (and others have, too) that the modulation section had problems. My manual states the modulators are running AB2 -- but when I ran the numbers and checked the voltages, I found it was really running AB1. I found that, in AB1, I simply did not have the "head room" to fully modulate all the Class C carrier this rig can produce. A good stiff bias supply and regulated screens on the 807 modulators, and running them AB2, will go a long way toward improving this rig. Else, you will have some trouble. Now, is this true for all Viking IIs? I cannot say -- but it certainly is true for some of them, and it was darned-sure true for mine! -- Richard

5256. Knight Kit Star Roamer II Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-25 22:38:35 UTC
From: Jim Bo <jbollit@ix.netcom.com>
Message-ID: <3A47CC6B.5325DB99@ix.netcom.com>
Source record: 58060

Hello,

Does anyone have a Star Roamer II manual that they could copy for me?

I will pay copy and mailing costs.

Thanks

Jim

5257. RE: Yaesu FT901ZD FS REVISED!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-25 22:49:22 UTC
From: kb9vu@aol.com
Message-ID: <20001225174922.03578.00001385@ng-cm1.aol.com>
Source record: 58061

Mistyped the model number! My apologies!

FS: Yaesu FT-101ZD transceiver. 160 through 10 meters (Including WARC) with CW filter, AM board, optional cooling fan and original owners manual and original service manual. Condition is a solid 8.5 with no scratches or dings. Outside could stand a clean up, inside is clean. Front panel is complete with no missing parts. Digital display is functional.

$325 shipped in CONUS

Jim,

I use the star roamer that my Dad and I built around 1970 and got the manual (somehow I lost mine) at:

ftp://bama.sbc.edu/downloads/knight/str-rmr/

This might not help though for a Star Roamer II.

73,

Bill

> by the varnish when you solder an MFPed connection.

The active fungus-killing ingredient in MFP is copper naphthnate. I am not sure if organo-mercury compounds were used in newer formulations after W.W.II. These compounds were frequently found in oil (alkyd) paint in the 1950's through the mid-1960's.

I would not worry too much about the amount of mercury released in soldering an old MPF-coated connection. You breathe far more lead from the soldering operation. However, it is still a good idea to work in a well-ventilated area. Also the fumes from the rosin flux are pretty bad on the lungs.

If you live near a coal-fired boiler, you are already getting a high mercury exposure.

5265. Re: Thunderbolt mods for modern transceiver use

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-26 15:44:13 UTC
From: Roger Leone <arleone@inreach.com>
Message-ID: <i_226.3725$9U1.134531@news.inreach.com>
Source record: 58069

Bill:

No mods are necessary. The amp works fine with modern equipment.

However, the amp has no TX/RX relays built in, nor control circuitry to operate them. They must be attached externally. And the relays have to have extra contacts (most Dow Key relays have them) to switch the bias voltage so the amp will be cutoff in RX and idling in TX.

The relays will probably need their own power supply, unless you use 110 VAC relays in which case you only need an AC cord. Your modern transceiver will need to switch the relays, which then control the Thunderbolt.

I have had my Thunderbolt for about 10 years and have used it with old and new stuff. The only mods I did were to change the 866 rectifiers to SS replacements and to put an adjustable resistor in series with the filament transformers so I could lower the filament voltage to 5 volts--my line voltage is a little high (around 126 usually) and I didn't want the filaments over their rated voltage.

Roger K6XQ

5266. Re: Thunderbolt mods for modern transceiver use

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-26 16:26:10 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3A48C6A2.300DBDA9@erols.com>
Source record: 58070

The most prominent feature you'll need to add is a coax relay. Older linears did not have an antenna relay, so you'll need to acquire a DowKey or Advance, etc. KW relay. These relays are, generally, 110VAC relays. As I recall, the T-bolt has the ability to key (read: turn on/off) an external antenna relay. This being the case, get a Dow-Key, etc. with the external contacts on it. These contacts will be used to key the PTT line on your transmitter or transceiver. The T-bolt doesn't have ALC, so a scope would help in the adjustment of drive and to see your output waveform. The T-bolt, as is, doesn't do break-in owing to the relays, etc., you have to use. I guess you could build a pin-diode switch assy., though, if you wanted to. Finally, note that the T-bolt has 2 input possibilities. One uses low-power drive with a tuned input. The other (as I recall) uses a swamped, no-tune input. Watch your drive level and install a good LP filter.
Good luck with your project! de Jeep/K3HVG

Hello,
I hope you all had a very Merry Christmas. I have a very hard to find Heathkit item for sale. It is the SA-2500 autotuner. This is a kilowatt+ antenna tuner that tunes automatically to you antenna. These are quite hard to find and really cool! This one is in very good condition with just a few paint flaws. It covers 1.8 to 30 MHz. It has two preset positions for each band (including WARC bands.) It works well and includes the original Heathkit manual and pictorial guide. Offered for sale at $450 plus shipping from Stuart, Florida 34996. Check out the links below for pictures.

Message-ID: <3A49835B.60EB320C@clsp.uswest.net>
Source record: 58087

At the moment the amp is sitting on my test bench awaiting a good cleaning so it doesn't look so beat up.

I am thinking of replacing the 811As with a pair of 572Bs, as well as the 3B28s with solid state strings. My goal is to run this as an AM linear in back of my Ranger (also being modified).

Has anyone have any experience with such a project?

The existing filter choke is a replacement unit that doesn't look big enough to do the job. It's footprint is smaller than what a stock unit would be; it's smaller than the one in my Ranger. Anyone have a spare, or better replacement? The stock unit is rated 10H/350mA.

I have some older BA stuff and want some newer BA stuff.
Have...
GPT750 by TMC is immaculate with manuals and some spares
75A4 with 3 filters and 4:1 is very pretty
GPR90, nice, x version
SX28A
couple of HQ170's
Hammie HX500 (immaculate with manual. Note: NOT HX50!)
and who know what else is kicking around hewre.

Also have some NIB, current product, 4KVA sine wave inverters.
These are instrumentation grade, 48VDC input and sell for almost
$7k/each (Abacus). 120VAC at 34amps, 60cycle out.
They are rack mount and fine for shipboard instrumentation, yacht,
or a high class solar powered house/RV. 4KVA, 7/24 rated and very clean
sine wave (NO noise!).

Also have a 1985.5 Porsche 944 in fair shape (needs new catalytic
converter and will need new timing belt and tires soon) black
in and out with leather/power seats.

Have a hankering to own a Signal One CX11 and would like to
discuss possible swaps. Also interested in a Harley SS250 or SS350
as swap for the 944.

No interest in outright sales.

-bob

I'm using a Hallicrafters "T.O." keyer (the original tube one, of course) with my Viking Ranger. Works great. I'd like to mod it to give it a "semi-automatic" mode, so I can make dashes manually when desired (e.g., bug emulation mode). Any help? Thanks.

HI Mi-key,

I have the same hookup but with a Viking Navigator.

What I did was simple. Just lift up the dash lead on the Iambic keyer and cover it with electrical tape.. (But keep the Dot lead connected)

Run a 2 conductor wire and attach it to the transmitter plug (the T.O. leads (GND/TX) are ready soldered to it - just parallel it).

Now attach the "Ground" to the Ground terminal of your Iambic keyer and the "Transmit" wire to the DASH lead of your keyer.

Now the T.O. can still make DOTS and you can use your Iambic Key to make DASHES as long as you want. (All you really did was bypass the T.O. mercury relay for Dashes).

If you want - you can make a little metal bracket that fits (screws down) on the DASH terminal of the Keyer. Make the bracket big enough to mount a minature bat SPDT switch and wire up both wires so you can change modes.

- AND THE BEST PART - YOUR T.O. WAS NOT DEVALUED MAKING A MODIFICATION !!!

DE DAAAAAAAAAAAAAAAA DIT ?

My XYL's aunt asked me what they were worth and I can't find any info on these -- just have a photo from her at this point. If interested, let me know. She will probably sell at FMV or reasonable offer from aviation collector.

From what I see, there are two pair of old style headphones and two carbon type mic units mounted to little brackets attached to small circuit boxes. The boxes appear to have provision for mounting to cockpit bulkhead. Everything is wired together and apparently works (I assume battery powers this "system"). She said it came from WW1 plane used in the war. Appears in fine shape from photo.

In WW1 they had what's called a gosport (sp). It was a flexible tube which each occupant either listened or spoke. I don't think any WW1 aircraft had electrical systems, per se. Sounds like it may be from a bit later in history. Markings, if any, may offer a clue to its actual era of use.
Regards N95JP

Some WWI aircraft had propeller driven electrical generators (small wing or fus. mounted generator with its own propeller), so it is feasible that this item could be WWI in nature. If it's military it should have some sort of nomenclature plate on it, usually with a date and manufacturer.

Don't know if this helps?

My Sylvania sheet dated 1951 says that it is an indirectly heated 9 pin double triode. Heater is 12.6 at 0.45 amps, or 6.3 at 0.9 amps.
Other data indicates somewhat high mu at 8100 micromhos under one set of conditions. And 5200 micro mhos under another set.

Connections:
Pin Function

1 plate 1
2 grid 1
3 cathode 1
4 heater
5 heater
6 cathode 2
7 grid 2
8 heater centre tap (for 6.3 volt)!
9 plate 2

The grid to plate and other capacitance's at around 4 mmfd. may indicate it is a high gain audio amp? No mention of regular '12 type' equivalent; but on another thought would it be something like a 12BY7 (I think I recall that correctly; or was it 12BH7) as used in some TV sets, as vertical oscillator and output? BTW I just looked at 12BH7 and some ratings are similar! And connections identical.

Email if you want the rest of the numbers. In meantime I'll look in my 'bigger' Sylvania tube handbook.

Regards. Terry S. Newfoundland, Canada.
A few miles from where, in 1901, Marconi received the first trans. Atlantic wireless message.

The efficiency and power supply limitations of the Courier will leave
you with VERY little advantage over the barefoot Ranger. The Courier was
a so-so amp for the SSB rigs of its day, but VERY limited and cumbersome
for modern sets - and not as efficient.

"$90.00 to your door Priority mail in CONUS"

Got to be a typo. Surely prices for docs haven't gotten this high nor has the new postage rates increased that much (I thought it was only an increase of a penny for a letter)? If a tube manual is going for $90 then I will have to abandon this hobby for something cheaper like precious stone collecting:) If manuals are really this expensive and you need information about the older tubes then try:

http://rabi.nmr.mgh.harvard.edu/~reese/RC-10.html/

as an alternative. It is an online gift from Steve Fellini, Doug Forbes, and Joseph Lowe and hosted by Tim Reese of the entire RCA RC-10 Tube manual. Individual pages and a complete zip archive in GIF format and a complete manual in Adobe Acrobate PDF format.

Hi All,
According to the weather channel, there is a major storm coming to
Soprano-Land.
According to the news, natural gas prices and heating oil prices are at an
all-time high.
Want an alternative method of heating a room???
Take the cover/cabinet off your SX11 and let the 6L6's do their thing!!! I have
found that running the Hallicrafters for an hour or so will heat an entire
shack!!! Turn out the lights, tune in Radio Havana, and let it snow..... In
addition to keeping the shack warm, you can keep up on the latest news from
around the world and keep an ear on the Hams too!!!!
Go try to do that with a Yaesu or Kenwood or any solid state set for that
matter!!!!!
rgds,
Mark S.

5331. audio output transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-28 23:27:39 UTC
From: sbertsch@layla.net.ohio-state.edu
Message-ID: <92gi9blp1@layla.net.ohio-state.edu>
Source record: 58035

Can a center-tapped audio output transformer, one intended for use in
a push-pull circuit, be used in a single ended circuit?

It may seem like a silly question, but here's why I ask: a transformer in
a push-pull circuit has a (theoretical) quiescent net magnetic flux of
zero, a single ended transformer obviously does not - yet I've been
unable to find any information about whether the cores are constructed
differently for the two applications.

Thanks for any insight,
Steve

Howdy Mark,
Thanks for the memories! Fondly recollect my Knight T150 or DX60 or DX100 and receivers such as Heath AR3, Comanche, RCA AR6 and of late Marconi's, Hammarlund HQ110 etc warming the shacks up here nicely. The lights out tuning not only enhanced your hearing but, with the pincushion effect from perforated cabinets, added to the mystique of those 40m CW (of course) DX stations....and the SW ones such as Quito Equador etc.
And right you are about the coldness of their modern counterparts. (maybe thats what happened to our legislators and people who seemingly strive to stick it to a once great hobby).

Howdy Steve.....(quiescent = steady state?) I don't know about that but would readily use a center tapped transformer in a single ended application, whether I used the whole primary or just 1/2 of it wouldn't matter (keeping in mind the current rating and impedance transformation desired AND tieing off that unused lead or leads if their flying)

73 - Keep on Tinkering ......THAT.....is REAL HAM RADIO

Source record: 58040

A center tapped output transformer most likely is designed for
P-P operation and as you correctly state, no net magnetic flux at "idle".
If used in a single ended amp, it will saturate at very low current,
usuallly around 10 mA or less and distort. Single ended transformers
have a gap in the magnetic circuit and will usually not have the laminations
interleaved. This gap allows enough current to flow for proper
single ended operation without core saturation. Additional flux
headroom is designed in to handle the audio, particularly for
low frequencies. Look for the gap in a single ended transformer.
Typically, it is small, on the order of several to tens of thousandths
of an inch.

Chuck...K1KW

Hi Chuck

Does this assume the P-P transformer is being used with Class A P-P
output stage, where the quiescent current doesn't vary?

I have for sale in excellent condition a DSI frequency counter model 5500 which covers 50HZ to over 500MHZ.....

Specifications.....

Frequency Range: Non-Prescaled 50 HZ to 50 MHZ TYP.
Prescaled 30 MHZ to 512 MHZ TYP.

Sensitivity: Non-Prescaled 10-15MV. 100HZ - 25 MHZ
Prescaled 10-15 MV. 50MHZ - 250 MHZ
15-50MV. 250MHZ - 450MHZ

Resolution: Non-Prescaled 1 HZ / 10 HZ
Prescaled 10 HZ / 100HZ

TimeBase: 3.579545 MHZ Temperature Compensated

Accuracy: + or - 1PPM 20 35 Degrees Celsius

Aging of TimeBase .2 PPM Per Month Typical

Input Impedance: Non-Prescaled 1 Megohm / 30PF
Prescaled 50 Ohms / 25PF

Display: 8 Digit Red Led, 1/3 Inch seven segment, automatic decimal
point placement, leading zero suppression

Input Connectors: Two BNC, Prescaled and Non-Prescaled

Power Required: 8.0 to 12.0 volts 115 VAC with optional AC adapter, also comes with rechargeable NI-CAD Baterries 6AAA Cells, 180 MAH Capacity

I will take $50 plus shipping 48 states only and can be reached at (508) 821-2993 or E-mail.....WZ1U Steve / Lakeville, Ma.

5343. Re: Thunderbolt mods for modern transceiver use

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-29 06:43:04 UTC
From: Larry Menzel <retire@rconnect.com>
Message-ID: <3A4C328E.193002A5@rconnect.com>
Source record: 57947

Might I ask why? There are SO MANY used linear amplifiers for modern radio, why would you want to go to the bother of this? The T-Bolt is a very low drive amp, only requiring 5-8 watts of drive for full output. Although it is a linear amplifier, it's basic use is AM and CW. For what it's worth, look for a much less expensive and more modern design...how about a nice SB200 or 220...or a SB1000 or an Ameritron 811 or ....more power less trouble....you can hook it right up to most 100 watt rigs...some need an external relay, be warned.

Additonally, the T-Bolt has no T/R circuit in it, so you have to key it with a dowkey relay...and then you have to mute the receiver on your modern radio or it'll blow the stuffing out of it...

Take some good advice, mine of course, and leave the T-Bolt to it's original and very much in demand purpose. By the way...if it's in nice shape, I'd be interested in buying it. Oh, yeah, it also weighs about 125 lbs. Has it been used recently...if not you better bring it up slowly with a variac to reform the caps...if they're not leaky and shot already.

If you do decide to do this, you better know what you're doing. Just like any high power device, there are lethal voltages present in this amplifier, and it'll kill you dead if you touch the wrong thing...oh, yeah, something else, you have to tune into a resisitive network that will handle 50-300 ohms...you're modern radio only likes a 50 ohm load....really, this is more trouble than it's worth. It's just not built for use with a modern tranciever.

Good Luck.

Larry, N0XB

5347. Free rcvr-- probably gone

Date: 2000-12-29 11:54:55 UTC
From: "R. Alfred Whiting" <gdwhiting@erols.com>
Message-ID: <92hv9h$6g5$1@bob.news.rcn.net>
Source record: 57951

The receiver I offered on the net ia a telemetry receiver by Defense Electronics Inc (now out of business). The RCVR rack mounts and is 7" high and of course 19" wide. It weighs 48 pounds, the manual weighs 3 pounds, for a total of 51 pounds plus packaging.

The rcvr has built in AM and FM demodulators, the installed front end tunes 105-155 MHz. That covers the upper end of the FM broadcast band, the aircraft navigation and communication band, the missle telemetry band (136-138), MARS, the 2M amateur band, and some part of the public service band. THe rcvr, has a signal level meter, a FM deviation meter, center tuning meter and an audio output meter.

I had ten calls (or offers to take this RCVR). So the rcvr can probably be considered gone.

>I am thinking of replacing the 811As with a pair of 572Bs, as well as
>the 3B28s with solid state strings. My goal is to run this as an AM
>linear in back of my Ranger (also being modified).

Hello Lou,

Let's see how this works out....

The power supply in the Courier (originally a pair of 866As feeding a choke input filter) is good for maybe 400-450 watts. In Class B AM linear service, the most power output you could reasonably get is 140-150 watts carrier power. The barefoot Ranger puts out around 40-50 watts carrier power, so you have to decide if the 3X power increase (4-5 dB) is worth all the trouble.

I don't know how well the power supply in the Courier will hold up under those conditions, either. 450 watts of CW or SSB is a different matter from the same power in AM service.

You can't run the original 811As at 400-450 watts AM linear, of course, because together they can only have 130 watts of plate dissipation. A pair of 572B/T-160Ls has 320 watts dissipation.
>
>Has anyone have any experience with such a project?

I've thought about such things but discarded the idea because of the low efficiency. A single plate-modulated 811 will produce more RF than the modified Courier. But you've gotta find the mod iron. The Ranger is actually set up to drive an external Class B modulator for high power setups - you don't have to build a whole low-level audio chain.
>
>The existing filter choke is a replacement unit that doesn't look big
>enough to do the job. It's footprint is smaller than what a stock unit
>would be; it's smaller than the one in my Ranger. Anyone have a spare,
>or better replacement? The stock unit is rated 10H/350mA.
>
I've got a bunch of chokes - almost surely have something that will work. How much space is there, and what style is the choke?

I recall that some of the small amps of the day put the choke in the center tap return lead of the plate transformer to reduce the insulation requirements. Is the Courier that way?

The Courier is from a different time. It runs a pair of 811As in grounded CATHODE - they're neutralized and operated Class B so that a big bleeder and/or swinging choke isn't needed in the power supply. The use of grounded cathode means only a few watts of drive is needed - this was the era of the CE 20A and other low-power SSB exciters. It can also do Class C CW, and put out some serious wattage. A Johnson Viking Navigator pushing a Courier is about one of the neatest BA CW setups imaginable - and it fits on the operating desk.

5354. Re: Thunderbolt mods for modern transceiver use

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-29 17:44:08 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <I3436.342$Dn1.191125@dfiatx1-snr1.gtei.net>
Source record: 57958

I agree that amps like the Thunderbolt and Courier are rather POOR in efficiency and cumbersome to interconnect compared with more current amps - but they definitely are NOT designed for AM operation! They are WAY to inefficient, and their power supplies and tube-cooling systems are NOT up to the task with any degree of reliability or survival!

They ARE (WERE) designed to be used with SSB or CW modes - and the Thunderbolt in particular was designed to operate with some of the low power SSB exciter/adapters available in its day - the Central Electronics 10A and B, the 20A and others like the Heathkit SB10. Johnson also marketed their own SSB adapter for use with the Valiant, and had the relatively low power Pacemaker SSB exciter.

I personally used a CE 20A to drive a Thunderbolt, with great success - but you DO have to be careful to not overdrive them, thet are an AB1 AB2 amp, and will distort easily if overdriven, and the power supply is really rather limited and WILL fail if pushed very far.

Source record: 57960

My comments are the same, regardless of the P-P
output stage operating class. In a P-P stage, provided
the tubes are balanced for quiescent current, the flux
will cancel and this is why these types of transformers
are designed to handle very little unbalanced DC. As a result,
a P-P transformer is smaller for a given freq response than
its single ended counterpart for the same power. In a
single ended design, the core must handle all the DC and
consequently has a gap to prevent saturation. The key is that
the flux cancellation only occurs for the DC component in the P-P case.
The transformer still must handle the audio component of current
in either case
Chuck...

From: Bob Liesenfeld <wb0poq@visi.com>
Message-ID: <3A4D13D9.41D06EE5@visi.com>
Source record: 57964

Hi gang,
After many years dwelling on solid state design, I want to heat up some bottles again. I frequently see boxes of tubes for sale, but don't want to add to an aready overfull junkbox. From my experience, a few types of semiconductors will meet a great many needs, so I have laid in a goodly stock of 2N2222, 2N3053, 2N3055, MPF102's etc.

What is your opinion of a good set of tubes to stock for general HF Tx/Rx use? ie., a good RF amp tube, good IF tube, osc, final(~10W max) etc. I'd like to keep the list down to perhaps 10 types at most.

Thanks for the input!

Bob L. WB0POQ

Bob - for xmitting, 6CL6 is pretty much the same as a 6AG7 - both were darlings of the ARRL in their tube designs. For finals you can't beat a 6146 but 2E26s are a scaled down version that are dirt cheap. If you can find 'em 2E24s are even cheaper - they have a quick heating filament that is usually off when receiving.
Multipliers can be 6CL6s or 6360 p-p tetrodes.

For the receiver, the usual suspect for IF work is either the 6SK7 (octal) or 6BA6 (miniature). Mixer can be a 6BE6 but they're pretty noisy. There are bunches oif multi-section miniatures that work better - ie 6U8 (triode for the rx LO and the pentode for the mixer). AF out, use 6AQ5s.

All of these tubes are dirt cheap, especially if you're not afraid of digging in the "Box of Tubes - $10" used hamfest variety.

For homebrew or reactivating boatanchors? Does size matter--octals,
minatures??
What are you specifically looking to do? If your homebrewing, you might
find a few of the popular old favorites have risen in price. If you're
willing to experiment, don't overlook some of the odd tv tubes, such as
compactrons, that are in great abundance and are cheaply priced. You're
best bet to is took over some 1950s vintage Amateur handbooks from Bill Orr
and the ARRL, and see what they used where.

5371. Gonset mic wiring?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-30 14:22:02 UTC
From: "David M. Monfried" <dmonfried@mindspring.com>
Message-ID: <92kr0giu1@slb3.atl.mindspring.net>
Source record: 57975

Just bought a never-used Gonset mic (through eBay), a beautiful little handheld with PTT. Can anyone help me with the wiring for it? It has three wires, red, white, and black. Before I start soldering and experimenting, perhaps someone knows the wiring scheme.

Many thanks and Happy New Year!

73,
Dave, W2PK

5372. Oscilloscope PROBE?

Newsgroup: rec.radio.amateur.boatanchors

I have an old EICO oscilloscope that I would like to use to check my transmitted signal on 14 Mhz.
Can someone tell me what I need to use for connecting the scope to the RF source? I have a probe that I bought at a hamfest of unknown properties, so I'm really in the dark here. (I do have the operatior's manual for the Eico 460... it looks like a kit from about 1950) TNX DE Johnny

Some oscilloscoped have provisions for directly connecting a signal to the deflecting plates. The manual would cover the procedure for how to do this safely.

Johnny

Most 1950 scope kits were designed for audio frequencies, and do not have the vertical amplifier bandwidth needed to display RF signals. Some 'scopes did have provisions so the vertical deflection plates could be directly driven by an RF source, however. There is usually a small access plate at the rear panel near the CRT socket for the necessary connections. Does the manual show this feature for the Eico scope? If so, I suggest you get a copy of the ARRL's SSB for the Radio Amateur publication; it's probably been out of publication for some time; or an early 1960s Handbook. Either will show how a scope can be used to display various patterns to analyze SSB signals. The signals are not coupled using convential scope probes, however.

5376. Re: Good tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-30 19:06:07 UTC
From: Mike Silva <mjsilva@my-deja.com>
Message-ID: <92lbmrmlr1@nnrp1.deja.com>
Source record: 57980

This is a juicy one -- the GB Top 10!

Off the top of my head:

1) 6AQ5 -- BP tube good for audio and RF (15-20 W input). 6V6 and 7C5 are equiv.

2) 6AU6 -- good all-purpose RF/IF sharp-cutoff pentode (also audio). 6SH7 is equiv, but supressor lead is not brought out separately.

3) 6BA6 -- ditto, but remote cutoff (wouldn't use it for audio). 6SG7 is equiv, but supressor lead not brought out separately.

4) 6AG7 -- good pentode oscillator and driver for your TX. 6CL6 and 12BY7 are similar. 6AC7 is smaller similar version (and 6AH6 equiv.) that's probably underused.

5) 6DQ6 -- BP horizontal output tube that's good for RF (up to 50W input) and AF power output. Also 6BQ6, 6BG6 and dozens of repackaged 6DQ6s e.g. 6GT5, 6GE5.

6) 2E26 -- RF output or driver tube capable of VHF operation, good to 40W input.

7) 807 -- The classic RF output tube, and the reason Novices used to be limited to 75W input (I'm just guessing there, but it makes sense!). Some have said it's a hard tube to tame, but the 807W/5933 is supposed to be much better in that regard. Also the 6146, the '50s answer to the 807.

8) 6EA8 -- triode/pentode combination tube. Actually there were many dozens of this kind of tube produced. Good utility tube for RF and AF (tie the screen to the plate for simplicity). Larger versions include e.g. 6AW8, 6JE8, 6GV8, 6GW8 and 6T9.

9) 0A2 -- Voltage regulator tube -- a must for keeping your oscillators (and regen detectors) stable. 0A2 (and 0D3 equiv.) runs at 150V. 0B2 (and 0C3 equiv.) runs at 105V.

10) 6AK6 -- What I like about this tube is its 150 mA heater current. It can be used for AF output or RF oscillator.

Some will notice with surprise that I didn't include the 6L6 in the list, or any dual triodes (6SN7, 6SL7, 12AU7, 12AT7, 12AX7). I agree that the 6L6 is a god among tubes, but for RF I'd use one of the TV sweep tubes, and I don't need that much AF power (but if you do it's an outstanding AF power tube). Plus, the audio crowd has driven up the prices. On the dual triodes, I just tend to prefer the triode/pentode

combos as more versatile. The audio crowd has also driven up the
prices of many of these types. One nice dual power triode is the 6N7 --
would probably make a nice-sounding RX output stage. I also didn't
include any RF mixers. The 6BE6 (6SA7 equiv.) is the main one,
but it's noisy. Mixers are something of an art, and you'd probably
want to do better than the 6BE6 is capable of. Makes a fine TX mixer
though.

One bit of advice: almost all these tubes can be had in 12V as well as
6V models, and often the 12V tubes are cheaper and/or easier to find.
I always use a 12VCT transformer so I can use either type.

73,
Mike, KK6GM

Quick question -

A friend gave me one of these, less manual. I haven't figured out all the controls, but will eventually. My question concerns the 'VOICE' pushbutton. The other five buttons on the left side are push on-push off. This one is acting like a momentary function, but I suspect it's busted inside. Do I need to try to get to the switch to repair it? (Don't know what it does - speech processor?)

Thanks,

Terry K8TP

well the "VOICE" push button is as you have found a momentary function
and activates the optional VS1 voice synth unit if fitted and has no other
function i.e. does nothing if the VS1 is not fitted.

drop an email to Kenwood.com or visit
http://www.Kenwood.com and have a look for sales / tech support
they may be able to get you a manual and info on the VS1 option.

73 , Happy new year

It is a momentary contact switch (does not latch) that triggers the voice synthesizer.

Check it out. I'd bet that white is mike audio, red PTT and black,
common ground. You can check continuity between red and black to conform
with an ohmmeter, should short and open with action on the PTT switch.
If so, the white is also confirmed as mike audio out.

What do you want to check? Monitoring the transmitted signal emvelope
is not that difficult to rig. Just arrange a coaxial T in line with the
transmitter output so that a small amount of RF is sampled into the
vertical input of the scope, being careful to keep the amount down so
you don't burn out the scope's vertical input attenuator circuitry (you
didn't say what power level you're running so you'll need to figure that
out). I like to monitor the envelope when using an amp. It will show an
abnormal display when something serious goes wrong, such as load change
that causes mismatch can cause a flattoped envelope.
I have a dedicated monitorscope that is constructed with this input in
mind, but you can easily do it with a general purpose scope such as the
Eico.
Hooking up to monitor the linearity of an amp is considerably more
involved and requires samplkng both the output of the exciter and the
amplifier, one to the vertical input and the other to the horizontal
circuit of the scope so that a "trapezoidal" pattern is created. The
slopes on the pattern indicate linearity, the straighter the slopes the
more linear. Curved slopes indicate a non-linearity in the amp since the
input signal and output signals are not exactly congruent.
A good older ARRL handbook (60's) would be helpful on this project.

It verbally announces the frequency when you push it (it is momentary)
but you have to have the optional auxiliary speech module. If it doesn't
spek when you push the button you don't have the voice module.

Has anybody had any luck making the chrome rings for
some of the National knobs? NC-183D, HRO-7, etc.

Would like to hear how you did it, materials, etc.

Yes...unless the mic requires a voltage, like in the ICOM's.
Then the voltage must match up, etc.

I'll add the following. The tip on the connector is PTT, the ring is mic, and the barrel is ground.

5402. Wavemeter Class D No1 Mk2/1

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-31 20:51:08 UTC
From: Kilobicycles <6amps@13.8volts>
Message-ID: <3A4F9C3C.42A5@13.8volts>
Source record: 57906

I recently picked up a nice Class D Wavemeter No1 Mk2/1, but it has a blue/grey front panel, not the usual olive green, and wonder if anyone knows of the application where this version would have been used.

The instruction label in the lid is printed metal (not paper) and still talks about use with the 19 and 22 sets, but the components and valve are dated June 1958, and it is wired in PVC. The internal mod label has states 1 and 2 marked.

Regards

Kilobicycles

I'm also interested in what you did. I had a V-II back in 1957, have recently bought one to renew my acquaintance. Actually, I haven't gotten it yet, it was a pickup deal in FL last Summer, so it's 600+ miles away at my brother's. I plan to pick it up next wk. It was a great AM rig back in the 50's-60's, I was the envy of the highschool ham crowd.

5405. Request for info, SW-3 coils

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-31 23:25:46 UTC
From: mulligan@advinc.com
Message-ID: <92of9n$t0q$1@nnrp1.deja.com>
Source record: 57909

Hi folks, hoping somebody could help me out here. I have a National SW3 and have been home-brewing coils for it. I found a web site with turns data, but the lowest frequency sets of coils were not listed there.

If anyone with a the following coils could count the turns, I would be really grateful. I need data on:

200 to 360 meter (1.5 to .833 MHz)
350 to 550 meter (.857 to .545 MHz)
500 to 850 meter (.600 to .353 HHz)

I think the pairs are the same, so I just need turns on each of the three windings per coil.

Thanks in advance for any information that shows up.

Jim

5406. Need pwr info on 1960s HT by Motorola

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-12-31 23:59:44 UTC
From: Bill Bird <billbird@networkusa.net>
Message-ID: <0NP36.19$LO2.303754@news1.i1.net>
Source record: 57911

I've got three Motorola FM Radiophone Handie-Talkies of about 1960s vintage. The Model Number is:
H23AAM-1101AH and xmtr type 003502. I would like to know what power is required for the units. Each unit is about 11in x 3in and 6in high with mic and ant connector on top as well as volume, squelch, and on/off on top. The top and bottom of unit comes apart and inside on the bottom half is the power area. An inside switch allows for int vs ext power. Above the switch is a 5A fuse, one unit's fuse also says 32V. There is a space for a battery about 3in x 3.5in and 3in high. There are two power connectors: one has two spades parallel to each other with the wider spade ground, the other connector has four spades, two parallel to each other and the other two are perpendicular.

The entire bottom section has a 8 pin in line female plug that connects it to the top section when put together.

Any schematic or general power requirements (int or ext) would be appreciated. Guesses or ideas too. I can also provide more information. Thanks.
